Our ACA-100 exam materials are the product of this era, which conforms to the development trend of the whole era. It seems that we have been in a state of study and examination since we can remember, and we have experienced countless tests. In the process of job hunting, we are always asked what are the achievements and what certificates have we obtained? Therefore, we get the test ACA-100 Certification and obtain the qualification certificate to become a quantitative standard, and our ACA-100 learning guide can help you to prove yourself the fastest in a very short period of time.

Our ACA-100 learning materials are known for instant download. You can get the download link and password within ten minutes after purchasing, therefore you can start your learning as quickly as possible. Besides, ACA-100 exam dumps contain most of knowledge points of the exam, and it will be enough for you to pass the exam, and in the process of practicing ACA-100 Exam Dumps, your professional ability will also be improved. We offer you free update for 365 days after purchasing. The latest version for ACA-100 training materials will be sent to your email automatically.

## ACA-100 Actual Exams - Formal ACA-100 Test

Since different people have different preferences, we have prepared three kinds of different versions of our ACA-100 practice test: PDF, Online App and software. Last but not least, our customers can accumulate exam experience as well as improving their exam

skills in the mock exam. And your success is 100 guaranteed for our pass rate of ACA-100 Exam Questions is as high as 99% to 100%. And We have put substantial amount of money and effort into upgrading the quality of our ACA-100 Exam Preparation materials.

## Appian Certified Analyst Sample Questions (Q33-Q38):

### NEW QUESTION # 33

The business has requested a requirement that developers say will be difficult to build in Appian. Which next step should the Appian Analyst take?

- **A. Ask the business about the underlying need for this feature, and provide alternate approaches that can achieve the same functionality.**
- B. Use a mockup to illustrate alternatives with different user interfaces, and propose the alternatives to the business in the next requirements session.
- C. Ask the developers to investigate workarounds or plug-ins to reduce the implementation effort.
- D. Ask the Product Owner if the requirement can be deprioritized.

**Answer: A**

Explanation:

When developers identify that a requested requirement will be difficult to build in Appian, the next step for the Appian Analyst is to engage with the business to understand the underlying need for the feature. By discussing the core objectives, the analyst can propose alternative approaches or solutions that are feasible within Appian's capabilities. This approach ensures that the business's needs are met while also aligning with the technical constraints of the platform. Appian Documentation - Requirements Gathering  
Note: Options A, C, and D may involve deprioritizing or investigating workarounds, but these steps should only be considered after thoroughly understanding the business requirement and exploring alternative solutions.

### NEW QUESTION # 34

An organization wants to automate identification of its dissatisfied customers based on the ticket description and assign the appropriate team to provide a quick resolution.

What is the best way to auto-classify the dissatisfied customers as part of processing?

- **A. Using a natural language connected system**
- B. Using an image analysis connected system
- C. Using a decision table
- D. Using a SAIL form

**Answer: A**

Explanation:

The organization aims to automate the identification of dissatisfied customers based on the ticket description. To achieve this, leveraging natural language processing (NLP) capabilities is the most efficient method. Appian provides connected systems that allow integration with external NLP services. These services can analyze text data (such as ticket descriptions) to determine the sentiment or classify the text into predefined categories (like "dissatisfied customer").

Natural Language Connected System:

Appian can integrate with third-party NLP platforms such as Google Cloud Natural Language, AWS Comprehend, or Azure Text Analytics via connected systems.

These services analyze the text provided in the ticket description to detect sentiment, keywords, or specific categories indicating dissatisfaction.

Based on the analysis, the system can automatically assign the appropriate team to handle the case.

Why Not Other Options?:

B . Decision Table: While decision tables are useful for rule-based decisions, they are not suitable for interpreting unstructured text like ticket descriptions.

C . Image Analysis Connected System: This option is irrelevant as the task involves text processing, not image analysis.

D . SAIL Form: SAIL forms are primarily used for user interface creation and are not intended for text analysis or classification.

Implementation in Appian:

Create a connected system to integrate with the chosen NLP service.

Configure the NLP service to analyze the text data and return the sentiment or classification results.

Based on the results, use process models to route the ticket to the appropriate team for resolution.

### NEW QUESTION # 35

You need to draft user stories.

What are the three most important requirements to collect?

- A. User Experience
- B. Security
- C. Branding
- D. Process Workflow steps
- E. Report Filters

**Answer: A,B,D**

Explanation:

When drafting user stories, the most important requirements to collect are those that directly impact the functionality, security, and user experience of the application. These elements ensure that the application not only meets the user's needs but also adheres to best practices in development.

Security (A):

Ensuring that the application is secure is paramount. Security requirements define how user data is protected and how access is controlled within the system.

This includes authentication, authorization, data encryption, and compliance with relevant regulations.

Process Workflow Steps (B):

Understanding the specific steps involved in the process is crucial for accurately capturing how the application should function.

Detailed workflow steps ensure that the application automates and supports the business process as intended.

User Experience (E):

The user experience (UX) defines how users interact with the application, including the interface design, ease of use, and overall satisfaction.

Capturing UX requirements ensures that the application is intuitive and meets the users' needs.

Why Not Other Options?:

C . Report Filters: While important, they are more specific to reporting functionality and not always a core component of every user story.

D . Branding: Branding requirements are typically considered during the design phase, but they are less critical in the functional drafting of user stories.

References:

Appian Documentation on Gathering Requirements: Requirements Gathering in Appian Focusing on security, process workflow, and user experience ensures that the application is robust, effective, and user-friendly.

### NEW QUESTION # 36

Users expressed that only managers should be able to see information related to a business object.

How should you translate this requirement into a user story?

- A. "As a manager, I need to be able to see a record type and navigate the details."
- B. "As a manager, I must be in the group to see the data."
- C. "As a manager, I need to build security options for records."
- D. "Only some of the data are available for managers."

**Answer: A**

Explanation:

The correct way to translate the requirement into a user story is to focus on the manager's ability to access and navigate the information related to the business object. This user story follows the standard format: "As a [role], I need to [action] so that [benefit]." In this case, the story captures the manager's need to view and interact with specific data.

User Story Format:

Role: Manager

Action: Ability to see and navigate a record type

Benefit: Ensures managers have the necessary access to perform their job duties Why Not Other Options?:

B . Focuses on building security options rather than the manager's need to access data.

C . Is vague and does not follow the standard user story format.

D . Focuses on group membership but is less specific about the action the manager needs to perform.

References:

Appian Documentation on User Stories: Writing User Stories

Using the correct user story format ensures that the development team clearly understands the requirement and how it benefits the end user.

### NEW QUESTION # 37

During a development sprint, a new issue is identified and raised to the team.

What should you ask the Product Owner to do?

- A. Add the new issue to the current sprint scope
- **B. Evaluate the severity of the issue and re-prioritize the sprint if needed**
- C. Modify the sprint plan to swap a completed story with the new issue
- D. Add the new issue in the next sprint

**Answer: B**

Explanation:

When a new issue is identified during a sprint, it is essential to evaluate its impact on the current sprint's goals and priorities. The Product Owner should assess the severity and importance of the issue. If it is critical, they may need to re-prioritize the sprint backlog and adjust the sprint scope accordingly. This approach ensures that the development team focuses on delivering the highest value to the project. Simply adding the issue to the current sprint or the next sprint without proper evaluation could disrupt the sprint's progress and lead to inefficiencies.
