## 2026 Certification EAEP2201 Dump | Efficient 100% Free Valid Enterprise Administration Professional 2201 Exam Forum

Without bothering to stick to any formality, our EAEP2201 learning quiz can be obtained within five minutes. No need to line up or queue up to get our EAEP2201 practice materials. They are not only efficient on downloading aspect, but can expedite your process of review. No harangue is included within EAEP2201 Training Materials and every page is written by our proficient experts with dedication. Our website experts simplify complex concepts and add examples, simulations, and diagrams to explain anything that might be difficult to understand.

## Esri Enterprise Administration Professional 2201 Sample Questions (Q50-Q55):

### NEW QUESTION # 50

A GIS administrator is analyzing the usage statistics of ArcGIS Enterprise. The administrator needs to pull tabular statistics on various groups and users about the type of content that they produce and consume. Which action should the administrator perform?

- A. Use ArcGIS Monitor to capture desired information over a period of time in a report.
- B. Open ArcGIS Server statistics to create a report for commonly used items.
- **C. Run usage reports in Portal for ArcGIS to determine the effect on the organization.**

**Answer: C**

Explanation:

Portal for ArcGIS provides built-in usage reports that allow administrators to monitor how members are using, sharing, and contributing resources. These reports offer insights into content creation, usage patterns, and group activities. Administrators can generate and export these reports in tabular formats for further analysis.

ArcGIS Server statistics focus on service-level metrics and do not provide detailed user or group content statistics. ArcGIS Monitor captures system performance metrics but is not designed for detailed content usage analysis by users or groups.

Reference Source: ArcGIS Enterprise documentation on usage reports in Portal for ArcGIS.

### NEW QUESTION # 51

An organization experiences a temporary loss of service for its ArcGIS Enterprise deployment due to expired licenses. What should the administrator have done to prevent this issue?

- A. Use the license file in read-only mode to extend the license
- **B. Create a Python script to run an administrative report and schedule the script to run regularly**
- C. Design an information banner to automatically display the license expiration date
- D. Configure the ArcGIS Enterprise portal to send an automated email when the portal license is expiring

**Answer: B**

Explanation:

ArcGIS Enterprise doesn't currently offer automated license expiration email alerts. However, administrators can use administrative scripts to query license status and generate reports that can be automated using task schedulers (e.g., Windows Task Scheduler).

From Esri guidance:

"Administrators can monitor license status using the ArcGIS REST API or scripting tools. Automating these checks allows timely action before licenses expire."

\* Option A is not a native capability of the portal.

\* Option C is not tied to licensing and is only useful as a passive alert.

\* Option D is not a valid license management option.

Reference: ArcGIS Enterprise - Managing License Expiry and Automating Admin Reports

### NEW QUESTION # 52

Portal for ArcGIS is running in a Windows environment.

Which type of account is recommended to run the Portal for ArcGIS service?

- A. Local machine administrator account
- B. Built-in system account
- **C. Group-managed service account**
- D. Windows Active Directory domain account

**Answer: C**

Explanation:

Esri recommends using a Group Managed Service Account (gMSA) to run Portal for ArcGIS services in Windows environments. gMSAs automatically manage passwords, align with Active Directory policies, and are ideal for enterprise-scale deployments.

From Esri documentation:

"Using a group managed service account (gMSA) to run Portal for ArcGIS services improves security by allowing Windows to manage the password, reducing administrative overhead while meeting enterprise security requirements."

\* Option B (regular AD account) is acceptable but requires manual password updates.

\* OptionCandDare not secure or scalable for enterprise environments.

### NEW QUESTION # 53

A user must create groups, edit features, and create web apps. This user will also create print layouts, charts, and animations using ArcGIS Pro. The organization has noadditional add-on licenses.

Which user type should be configured for this user?

- A. GIS Professional
- B. Creator
- C. Editor

**Answer: A**

Explanation:

TheGIS Professionaluser type includes access toArcGIS Pro, which is required for creating print layouts, charts, animations, and conducting advanced analysis. It also includes capabilities such as creating groups, editing features, and creating web apps within the ArcGIS Enterprise portal-without needing additional add- on licenses.

TheCreatoruser type supports most web GIS tasks butdoes not include ArcGIS Prounless an add-on license is assigned.

TheEditoruser type is the most limited and is intended for editing existing content only, not for creating or managing groups or web applications.

### NEW QUESTION # 54

ArcGIS Server is installed with its Web Adaptor on the same server. The configuration is as follows:

\* ArcGIS Server is federated with Portal for ArcGIS

\* Portal is set up to use Integrated Windows Authentication

\* The environment was set up using a domain certificate

\* The attempted login account is a Windows account with admin privileges A GIS administrator tries to connect to ArcGIS Server Manager through ArcGIS Web Adaptor but the connection fails. Why did the connection fail?

- A. The certificate must come from a valid Certificate Authority and not a Domain Certificate Authority
- B. The Web Adaptor was not set to allow administrative access to the server
- C. The connection must be made with an internal admin account and not a Windows account

**Answer: B**

Explanation:

When using aWeb Adaptor to accessArcGIS Server Manager,administrative access must be explicitly enabled during Web Adaptor configuration. If this setting is not enabled, even valid administrator accounts (including Windows accounts with elevated privileges) will be unable to access ArcGIS Server Manager via the Web Adaptor.

This is a common configuration oversight. The federation, IWA setup, and domain certificate are not the causes here. A domain certificate is valid within trusted enterprise networks, and Windows accounts can access services through IWA once configured correctly.
