

Palo Alto Networks PCCP Reliable Exam Topics | PCCP Free Sample Questions

BONUS!!! Download part of DumpsFree PCCP dumps for free: https://drive.google.com/open?id=1aa-KENqLXCp_VgsNnTRXwYgKVTfBPb3A

DumpsFree makes your PCCP exam preparation easy with its various quality features. Our PCCP exam braindumps come with 100% passing and refund guarantee. DumpsFree is dedicated to your accomplishment, hence assures you successful in PCCP Certification exam on the first try. If for any reason, a candidate fails in PCCP exam then he will be refunded his money after the refund process. Also, we offer one year free updates to our PCCP Exam esteemed user, these updates are applicable to your account right from the date of purchase. 24/7 customer support is favorable to candidates who can email us if they find any ambiguity in the PCCP exam dumps, our support will merely reply to your all Palo Alto Networks Certified Cybersecurity Practitioner exam product related queries.

The Palo Alto Networks PCCP exam questions are designed and verified by experienced and qualified Palo Alto Networks PCCP exam trainers. They work together and share their expertise to maintain the top standard of Palo Alto Networks PCCP Exam Practice test. So you can get trust on Palo Alto Networks PCCP exam questions and start preparing today.

PCCP Exam Braindumps: Palo Alto Networks Certified Cybersecurity Practitioner & PCCP Dumps Guide

We provide you the free download and tryout of our PCCP study tool before your purchase our product and we provide the demo of the product to let the client know our product fully. After you visit the pages of our PCCP test torrent on the websites, you can know the version of the product, the updated time, the quantity of the questions and answers, the characteristics and merits of the Palo Alto Networks Certified Cybersecurity Practitioner guide torrent, the price of the product and the discounts. In the pages of our product on the website, you can find the details and guarantee and the contact method, the evaluations of the client on our PCCP Test Torrent and other information about our product. So it is very convenient for you.

Palo Alto Networks PCCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Cybersecurity: This section of the exam measures skills of a Cybersecurity Practitioner and covers fundamental concepts of cybersecurity, including the components of the authentication, authorization, and accounting (AAA) framework, attacker techniques as defined by the MITRE ATT&CK framework, and key principles of Zero Trust such as continuous monitoring and least privilege access. It also addresses understanding advanced persistent threats (APT) and common security technologies like identity and access management (IAM), multi-factor authentication (MFA), mobile device and application management, and email security.

Topic 2	<ul style="list-style-type: none"> Endpoint Security: This domain is aimed at an Endpoint Security Analyst and covers identifying indicators of compromise (IOCs) and understanding the limits of signature-based anti-malware. It includes concepts like User and Entity Behavior Analytics (UEBA), endpoint detection and response (EDR), and extended detection and response (XDR). It also describes behavioral threat prevention and endpoint security technologies such as host-based firewalls, intrusion prevention systems, device control, application control, disk encryption, patch management, and features of Cortex XDR.
Topic 3	<ul style="list-style-type: none"> Security Operations: This final section measures skills of a Security Operations Analyst and covers key characteristics and practices of threat hunting and incident response processes. It explains functions and benefits of security information and event management (SIEM) platforms, security orchestration, automation, and response (SOAR) tools, and attack surface management (ASM) platforms. It also highlights the functionalities of Cortex solutions, including XSOAR, Xpanse, and XSIAM, and describes services offered by Palo Alto Networks' Unit 42.

Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q26-Q31):

NEW QUESTION # 26

Which security function enables a firewall to validate the operating system version of a device before granting it network access?

- A. Host intrusion prevention system (HIPS)
- B. Stateless packet inspection
- C. Identity Threat Detection and Response (ITDR)
- D. Sandboxing

Answer: A

Explanation:

Host Intrusion Prevention Systems (HIPS) operate on endpoints to enforce security policies by monitoring system calls, file integrity, and configuration settings. HIPS can validate device compliance, including operating system versions and patch levels, before permitting network access. This capability prevents vulnerable or outdated devices from becoming attack vectors. Palo Alto Networks integrates HIPS functionalities in its endpoint security solutions, providing granular control to enforce organizational security standards and reduce risk from non-compliant endpoints. Unlike network-based inspection, HIPS works locally on hosts to stop threats at their origin.

NEW QUESTION # 27

Match each tunneling protocol to its definition.

Answer Area

L2TP	<input type="text"/>	Commonly uses PAP, CHAP, and MS-CHAP
PPTP	<input type="text"/>	Layer 2 tunneling protocol usually paired with IPSec
TLS	<input type="text"/>	A tunneling protocol primarily used for remote access via SSL
	<input type="text"/>	An asymmetric encryption protocol used to secure communications

Answer:

Explanation:

Answer Area

L2TP	SSTP	Commonly uses PAP, CHAP, and MS-CHAP
PPTP	L2TP	Layer 2 tunneling protocol usually paired with IPSec
TLS	PPTP	A tunneling protocol primarily used for remote access via SSL
SSTP	TLS	An asymmetric encryption protocol used to secure communications

Explanation:

Correct Answer:

Answer Area

L2TP	SSTP	Commonly uses PAP, CHAP, and MS-CHAP
PPTP	L2TP	Layer 2 tunneling protocol usually paired with IPSec
TLS	PPTP	A tunneling protocol primarily used for remote access via SSL
SSTP	TLS	An asymmetric encryption protocol used to secure communications

NEW QUESTION # 28

Which type of system collects data and uses correlation rules to trigger alarms?

- A. SOAR
- B. UEBA
- C. SIEM
- D. SIM

Answer: C

Explanation:

A Security Information and Event Management (SIEM) system collects data from various sources (logs, events, etc.) and uses correlation rules to analyze this data and trigger alarms when suspicious or predefined patterns are detected.

NEW QUESTION # 29

Which capability of a Zero Trust network security architecture leverages the combination of application, user, and content identification to prevent unauthorized access?

- A. Inspection of all traffic
- B. Cyber threat protection
- C. Least privileges access control
- D. Network segmentation

Answer: C

Explanation:

Least privileges access control is the capability of a Zero Trust network security architecture that leverages the combination of application, user, and content identification to prevent unauthorized access. Least privileges access control means that users and devices are only granted the permissions they need to perform their tasks, and nothing more. This helps reduce the attack surface and makes it more difficult for attackers to gain access to sensitive data or resources. Least privileges access control is based on the principle of Zero Trust, which assumes that there are attackers both within and outside of the network, so no users or devices should

be automatically trusted. Zero Trust verifies user identity and privileges as well as device identity and security, and requires end-to-end encryption. Least privileges access control also involves careful management of user permissions and network segmentation, which limit the amount of information and length of time people can access something, and contain the damage if someone does get unauthorized access. References: What Is Zero Trust Architecture? | Microsoft Security, Zero Trust security | What is a Zero Trust network? | Cloudflare, What is Zero Trust Architecture? | SANS Institute, What Is a Zero Trust Architecture? | Zscaler, What is Zero Trust Architecture (ZTA)? - CrowdStrike.

NEW QUESTION # 30

What are three benefits of SD-WAN infrastructure? (Choose three.)

- A. Utilizing zero-touch provisioning for automated deployments
- B. Leveraging remote site routing technical support by relying on MPLS
- C. Promoting simplicity through the utilization of a centralized management structure
- D. Improving performance by allowing efficient access to cloud-based resources without requiring back-haul traffic to a centralized location
- E. Improving performance of SaaS applications by requiring all traffic to be back-hauled through the corporate headquarters network

Answer: A,C,D

Explanation:

Simplicity: Because each device is centrally managed, with routing based on application policies, WAN managers can create and update security rules in real time as network requirements change. Also, when SD-WAN is combined with zero-touch provisioning, a feature that helps automate the deployment and configuration processes, organizations can further reduce the complexity, resources, and operating expenses required to spin up new sites. **Improved performance:** By allowing efficient access to cloud-based resources without the need to backhaul traffic to centralized locations, organizations can provide a better user experience.

NEW QUESTION # 31

.....

If you get our PCCP training guide, you will surely find a better self. As we all know, the best way to gain confidence is to do something successfully. With our PCCP study materials, you will easily pass the PCCP examination and gain more confidence. As there are three versions of our PCCP preparation questions: the PDF, Software and APP online, so you will find you can have a wonderful study experience with your favorite version.
