当社からPCCP学習教材を購入する場合、高品質のPCCP学習問題と最高のサービスを提供できてうれしいです。当社の理念は「品質は命、顧客は神」です。当社はすべての顧客に完璧な品質保証システムと健全な管理システムを提供することを約束できます。当社のPCCP学習教材の品質とサービスについて心配する必要はありません。弊社からPCCP学習問題を購入することを決めた場合、想像をはるかに超えるものを受け取ることになります。

Palo Alto Networks PCCP 認定試験の出題範囲：

トピック	出題範囲
トピック 1	Endpoint Security: This domain is aimed at an Endpoint Security Analyst and covers identifying indicators of compromise (IOCs) and understanding the limits of signature-based anti-malware. It includes concepts like User and Entity Behavior Analytics (UEBA), endpoint detection and response (EDR), and extended detection and response (XDR). It also describes behavioral threat prevention and endpoint security technologies such as host-based firewalls, intrusion prevention systems, device control, application control, disk encryption, patch management, and features of Cortex XDR.
トピック 2	Security Operations: This final section measures skills of a Security Operations Analyst and covers key characteristics and practices of threat hunting and incident response processes. It explains functions and benefits of security information and event management (SIEM) platforms, security orchestration, automation, and response (SOAR) tools, and attack surface management (ASM) platforms. It also highlights the functionalities of Cortex solutions, including XSOAR, Xparse, and XSIAM, and describes services offered by Palo Alto Networks' Unit 42.
トピック 3	Cloud Security: This section targets a Cloud Security Specialist and addresses major cloud architectures and topologies. It discusses security challenges like application security, cloud posture, and runtime security. Candidates will learn about technologies securing cloud environments such as Cloud Security Posture Management (CSPM) and Cloud Workload Protection Platforms (CWPP), as well as the functions of a Cloud Native Application Protection Platform (CNAPP) and features of Cortex Cloud.
トピック 4	Secure Access: This part of the exam measures skills of a Secure Access Engineer and focuses on defining and differentiating Secure Access Service Edge (SASE) and Secure Service Edge (SSE). It covers challenges related to confidentiality, integrity, and availability of data and applications across data, private apps, SaaS, and AI tools. It examines security technologies including secure web gateways, enterprise browsers, remote browser isolation, data loss prevention (DLP), and cloud access security brokers (CASB). The section also describes Software-Defined Wide Area Network (SD-WAN) and Prisma SASE solutions such as Prisma Access, SD-WAN, AI Access, and enterprise DLP.

Palo Alto Networks Certified Cybersecurity Practitioner 認定 PCCP 試験問題 (Q36-Q41):

質問 # 36

An administrator finds multiple gambling websites in the network traffic log.
What can be created to dynamically block these websites?

- A. Decryption policy
- **B. URL category**
- C. Custom signatures
- D. Application group

正解: B

解説:

URL categories classify websites based on content type or risk, enabling dynamic policy enforcement such as blocking or allowing access. Administrators can create custom URL categories to group sites like gambling domains and apply blocking rules across the firewall infrastructure. Palo Alto Networks firewalls leverage URL categorization combined with threat intelligence to provide granular web filtering, reducing exposure to malicious or unwanted sites. This dynamic grouping approach is more manageable and scalable than creating individual signatures or static lists and allows for automated policy application aligned with organizational compliance requirements.

質問 # 37

A native hypervisor runs:

- A. within an operating system's environment
- B. with extreme demands on network throughput
- C. only on certain platforms
- **D. directly on the host computer's hardware**

正解: D

解説:

Type 1 (native or bare metal). Runs directly on the host computer's hardware

Type 2 (hosted). Runs within an operating system environment

質問 # 38

What are two capabilities of identity threat detection and response (ITDR)? (Choose two.)

- **A. Scanning for excessive logins**
- B. Securing individual devices
- **C. Analyzing access management logs**
- D. Matching risks to signatures

正解: A、C

質問 # 39

Which type of Software as a Service (SaaS) application provides business benefits, is fast to deploy, requires minimal cost and is

infinitely scalable?

- A. Tolerated
- B. Benign
- C. Secure
- **D. Sanctioned**

正解: D

解説:

Sanctioned SaaS applications are those that are approved and supported by the organization's IT department.

They provide business benefits such as increased productivity, collaboration, and efficiency. They are fast to deploy because they do not require installation or maintenance on the user's device. They require minimal cost because they are usually paid on a subscription or usage basis, and they do not incur hardware or software expenses. They are infinitely scalable because they can adjust to the changing needs and demands of the organization without affecting performance or availability¹². 質問 # 40

Which service is encompassed by serverless architecture?

- A. Security as a Service (SaaS)
- B. Infrastructure as a Service (IaaS)
- C. Authentication as a Service
- **D. Function as a Service (FaaS)**

正解: D

解説:

Serverless architecture is primarily implemented through Function as a Service (FaaS), where developers write and deploy individual functions without managing the underlying infrastructure. The cloud provider handles scaling, resource allocation, and execution on demand.

質問 # 41
