

2V0-11.25考古題，2V0-11.25考試證照

順便提一下，可以從雲存儲中下載VCESoft 2V0-11.25考試題庫的完整版：<https://drive.google.com/open?id=1F961HnWepZkTmuWHdb90pgS5BuHx8fab>

大多數人在選擇VMware的2V0-11.25的考試，由於它的普及，你完全可以使用VCESoft VMware的2V0-11.25考試的試題及答案來檢驗，可以通過考試，還會給你帶來極大的方便和舒適，這個被實踐檢驗過無數次的網站在互聯網上提供了考試題及答案，眾所周知，我們VCESoft是提供 VMware的2V0-11.25考試試題及答案的專業網站。

VMware 2V0-11.25 考試大綱：

主題	簡介
主題 1	- Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network - storage design.
主題 2	VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.
主題 3	Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.

主題 4	IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.
主題 5	Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.

選擇我們有效的2V0-11.25考古題: VMware Cloud Foundation 5.2 Administrator, VMware 2V0-11.25當然很簡單通過

多年以來，VCESoft一直致力於為廣大參加IT認證考試的考生們提供最優秀並且最值得信賴的參考資料。關於IT認證考試的出題，VCESoft有著豐富的經驗。而且，VCESoft已經幫助過無數的考生，並得到了大家的信賴和表揚。所以，不要懷疑VCESoft的2V0-11.25考古題的品質了。這絕對是一個可以保證你通過2V0-11.25考試的資料。VCESoft向你保證考不過就全額退款。有了這個保證，你完全沒有必要再猶豫到底要不要買這個考古題了。错过了它將是你很大的損失。

最新的 VCP-VCF Administrator 2V0-11.25 免費考試真題 (Q39-Q44):

問題 #39

An administrator has been tasked with adding a new VI workload Domain to an instance of VMware Cloud Foundation (VCF). The administrator only has two prepared ESXi host servers showing in SDDC Manager.

The new VI Workload Domain must use vSphere Lifecycle Images.

Which three supported principal storage options are available to the administrator when configuring the new VI Workload Domain? (Choose three.)

- A. VSAN
- B. VMFS on local disk
- C. iSCSI
- D. NFS v3
- E. vVols
- F. VMFS on FC

答案: D,E,F

問題 #40

An administrator is responsible for maintaining a VMware Cloud Foundation (VCF) instance. The administrator has been tasked with scaling the CPU and RAM resources of a virtual machine.

Which three configuration limitations must the administrator consider when completing the task? (Choose three.)

- A. To remove Memory to a powered on virtual machine, Memory Hot Add must be enabled.
- B. To add vCPUs to a powered on virtual machine CPU Hot Add must be enabled.
- C. To add vCPUs to a powered down virtual machine, CPU Hot Add must be enabled.
- D. To enable Memory Hot Add feature, the virtual machine compatibility must be ESXi 7.0 Update 2 or later.
- E. To add Memory to a powered on virtual machine, Memory Hot Add must be enabled.
- F. To enable the CPU Hot Add or Memory Hot Add feature, the virtual machine must be powered off.

答案: B,E,F

解題說明:

Memory Hot Add must be enabled before you can add RAM to a running VM.

CPU Hot Add must be enabled before adding vCPUs to a powered-on VM.

You can only toggle the Hot Add features (CPU or Memory) when the VM is powered off.

問題 #41

An administrator is deploying a new VMware Cloud Foundation (VCF) environment. After uploading the completed Deployment Parameter Workbook, the validation task fails and an error message is displayed within the VMware Cloud Builder GUI.

Which log file can the administrator use to identify the cause of the validation error?

- A. domainmanager.log
- B. sos.log
- C. vcf-bringup-debug.log
- D. jsongenerator-`<timestamp>`.log

答案: C

解題說明:

Comprehensive and Detailed Explanation From Exact Extract:

According to the official VMware Cloud Foundation Deployment Guide and VMware Cloud Builder troubleshooting documentation, the primary log file used for tracking and diagnosing bring-up and validation errors in a new VCF deployment is:

A . vcf-bringup-debug.log

Exact Extract from VMware Documentation:

"The vcf-bringup-debug.log file records detailed information about all bring-up operations, including parameter validation checks, environment checks, and errors encountered during the deployment process. When a validation task fails in the Cloud Builder GUI, this log file provides the necessary diagnostic information to identify the cause of the error." Why Not the Other Options?

B . sos.log: Used for SDDC Manager service health and not specific to Cloud Builder validation or deployment tasks.

C . domainmanager.log: Used for ongoing domain management and operations within SDDC Manager, not for Cloud Builder or bring-up process.

D . jsongenerator-`<timestamp>`.log: Related to the generation of JSON files from the parameter workbook, but not the source for in-depth validation or deployment errors.

Summary:

When a validation task fails during the deployment of a new VMware Cloud Foundation environment in Cloud Builder, the administrator should review the vcf-bringup-debug.log file to diagnose and resolve the error, as directed by official VMware documentation.

問題 #42

An administrator needs to ensure that specific virtual machines within a VMware Cloud Foundation environment use storage that can tolerate at least two host failures. As resources are limited, the configuration should use the available resources as efficiently as possible.

Which three steps should be performed to configure a storage policy that meets the requirements? (Choose three.)

- A. Apply the storage policy to the target VMs.
- B. Set Failures to Tolerate to "2 failures - RAID-1 (Mirroring)" in the policy configuration.
- C. Configure the policy to use thin provisioning.
- D. Reconfigure the existing Default Storage Policy in the vSphere Client.
- E. Set Failures to Tolerate to "2 failures - RAID-6 (Erasure Coding)" in the policy configuration.
- F. Create a new VM Storage Policy in the vSphere Client.

答案: A,E,F

解題說明:

A new VM storage policy needs to be created in the vSphere Client to define specific requirements for the storage configuration, including tolerance for two host failures.

Once the storage policy is created, it must be applied to the specific virtual machines that require the storage configuration that tolerates two host failures.

To ensure the storage configuration tolerates two host failures efficiently, RAID-6 (Erasure Coding) is the appropriate choice.

RAID-6 can tolerate two host failures while minimizing resource usage compared to other configurations like RAID-1.

問題 #43

A single VM is unable to communicate with other VMs on the same network. An administrator needs to identify and resolve the network connectivity issue.

What three steps should the administrator follow? (Choose three.)

- A. Verify that the virtual network adapter is present and connected.
- B. Restart the VM to reset its network connections.
- C. Ensure that the Port Group name(s) associated with the VMs network adapter exists in the vSwitch or VDS and is spelled correctly
- D. Use the ESXi command line to check the status of the VM Kernel adapter.
- E. Verify that the networking within the VMs guest OS is correct.

答案: A,C,E

解題說明：

Ensuring the guest OS network configuration (IP, subnet mask, gateway) is correct rules out misconfiguration within the VM.

Confirming the virtual NIC is present and connected verifies the VM's link to the virtual switch.

Checking that the port group name exists and is correct ensures the VM is attached to the intended network segment.

問題 #44
