

Free PDF 2026 C_S4CPB: Reliable Cost Effective SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602) Dumps

If you do not quickly begin to improve your own strength, the next one facing the unemployment crisis is you. The time is very tight, and choosing our C_S4CPB study materials can save you a lot of time. And our C_S4CPB Exam Questions can really save you time and efforts. If you study with our C_S4CPB learning guide for 20 to 30 hours, then you will be able to pass the exam and get the certification.

Itbraindumps provides you with tri-format prep material compiled under the supervision of 90,000 SAP professionals from around the world that includes everything you need to pass the SAP C_S4CPB Exam on your first try. The preparation material consists of a PDF, practice test software for Windows, and a web-based practice exam. All of these preparation formats are necessary for complete and flawless preparation.

>> Cost Effective C_S4CPB Dumps <<

Real C_S4CPB Dumps Free, C_S4CPB Study Test

One of the most significant parts of your SAP C_S4CPB certification exam preparation is consistent practice. Itbraindumps has make sure that you get sufficient C_S4CPB exam practice by adding SAP C_S4CPB desktop practice exam software to your study course. This SAP C_S4CPB desktop-based practice exam software is compatible with all windows-based devices.

SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602) Sample Questions (Q13-Q18):

NEW QUESTION # 13

SIMULATION

Migrate Bank Data

Business Scenario

You are responsible for migrating bank data into the SAP S/4HANA Cloud Public Edition system. You have determined the best method is Migrate Data Using Staging Tables, as you only have a couple banks to migrate.

Prerequisites:

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Migrate the bank data listed below.

Table 1: Bank 1

□

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to migrate two bank master records into SAP S/4HANA Cloud Public Edition using the Migrate Data Using Staging Tables approach.

This task is performed inside the migration project created earlier:

Migration Project Name: Bank Data #####

Migration Object: Bank

The bank master data must be entered exactly as provided in the task tables.

Business Scenario Explanation

In this scenario, you are responsible for loading a small number of bank records into the system. Because there are only two banks to migrate, the selected migration method is:

Migrate Data Using Staging Tables

This method requires you to:

open the existing migration project,

download the Bank templates,

populate the required CSV file with the bank data,

upload the files,

validate the data,

transfer the data to staging tables,

complete any required mapping tasks,

migrate the bank instances,

verify the migrated banks in the target app.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the values exactly as shown in the task.

Keep names, spaces, and numbers exactly correct.

During your execution, mappings may be required for:

Country/Region Key

Language Key (ISO)

Regional Code

Bank Key

If regional text values like Pennsylvania or Georgia are rejected, mapping may be needed to:

PA

GA

Example

If the suffix is 000013, the values become:

Bank 1

Bank Country/Region = US

Bank Key = A000013

Bank Name = Bank of A000013

Street = West Chester Pike

House Number = 3999

City = Newtown Square

Postal Code = 19073

Country/Region = US

Language = EN

Location = Pennsylvania

Bank 2

Bank Country/Region = US

Bank Key = Z000013

Bank Name = Bank of Z000013

Street = Lenox Road

House Number = 3580

City = Atlanta

Postal Code = 30326

Country/Region = US

Language = EN

Location = Georgia

Detailed Step-by-Step Procedure

Step 1: Open the app "Migrate Your Data"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Search for:

Migrate Your Data

or

Migration Projects

Open the app.

Explanation:

This app is the migration cockpit where the project and Bank migration object are maintained.

Step 2: Open the migration project

In the migration projects list:

Search for your project:

Bank Data #####

Open the project.

Example

If your suffix is 000013, open:

Bank Data 000013

Explanation:

This is the migration project created in the previous task and it contains the migration object Bank.

Step 3: Open the Bank migration object

Inside the migration project:

Locate the migration object:

Bank

Open it.

Explanation:

The Bank migration object is where the templates, uploads, mapping tasks, and migration instances are handled.

Step 4: Download the template files

On the Bank migration object screen:

Click:

Download Template

This provides the CSV template files needed for migration.

Explanation:

For the Bank migration object, the main files typically include:

S_BNKA#FreeText_Mandatory.csv

S_SCRIPT_ADRC#FreeText.csv

The mandatory file contains the bank master structure; the second file is optional for international address versions.

Step 5: Populate the mandatory Bank CSV file

Open the mandatory CSV file:

S_BNKA#FreeText_Mandatory.csv

Enter the two bank records exactly as required from the task tables.

Explanation:

This file must contain the bank master data that will be loaded into the staging tables.

The data must match the required values exactly.

Step 6: Use the correct values in the Bank CSV

Populate the mandatory file with the two records.

Bank 1

Bank Country/Region = US

Bank Key = A#####

Bank Name = Bank of A#####

Street = West Chester Pike

House Number = 3999

City = Newtown Square

Postal Code = 19073

Country/Region = US

Language = EN

Location = Pennsylvania

Bank 2

Bank Country/Region = US
Bank Key = Z#####
Bank Name = Bank of Z#####
Street = Lenox Road
House Number = 3580
City = Atlanta
Postal Code = 30326
Country/Region = US
Language = EN
Location = Georgia

Explanation:

These values create two bank master records, one beginning with key A##### and the other with key Z#####.

Step 7: Keep the optional international address file empty if not needed For the file:

S_SCRIPT_ADRC#FreeText.csv

leave it with header only if no separate international address version data is required.

Explanation:

During your execution, the optional file was not required and the Bank migration still proceeded because only the mandatory Bank Master structure had to be populated.

Step 8: Open Upload Files

In the Bank migration object:

Go to:

Upload Files

Explanation:

This is where the CSV folder is created and the files are uploaded to the migration cockpit.

Step 9: Create a CSV Folder

Click:

Create CSV Folder

Explanation:

When using CSV with staging tables, SAP groups the upload into a CSV folder structure.

Step 10: Upload the CSV files

Upload:

S_BNKA#FreeText_Mandatory.csv

S_SCRIPT_ADRC#FreeText.csv (optional / empty if not used)

Explanation:

The mandatory file is required.

The optional file may remain empty or not provided depending on the migration object's structure.

Step 11: Validate the data

After upload:

Click:

Validate Data

Explanation:

This checks:

- file readability,
- required columns,
- correct structure,
- duplicate keys,
- and data consistency.

Step 12: Correct any file or format errors if needed

During execution, common issues included:

- wrong file mapping,
- UTF-8 / CSV reading problems,
- missing mandatory fields,
- duplicate key values,
- region value mismatches.

Explanation:

You must resolve validation errors before continuing to staging tables.

Examples from your run:

- duplicate key values had to be corrected,
- file structure mapping had to be adjusted,
- CSV encoding had to be corrected.

Step 13: Transfer data to staging tables

After validation is successful, click:

Transfer Data to Staging Tables

Explanation:

This moves the validated CSV data into SAP's staging tables so the Bank migration object can create migration instances.

Step 14: Go to Mapping Tasks if required

If the system shows mapping tasks, open:

Mapping Tasks

Explanation:

For your run, the following mappings had to be confirmed:

Country/Region Key

Language Key (ISO)

Regional Code

Bank Key

Step 15: Maintain mapping values

If mappings appear, confirm or maintain them as follows:

Country/Region Key

source US → target US

Language Key (ISO)

source EN → target EN

Regional Code

If text values are shown:

source Pennsylvania → target PA

source Georgia → target GA

Bank Key

Confirm the system-generated source values to the correct target values for:

A#####

Z#####

Explanation:

These mappings are required when the migration object needs target-system value confirmation before posting the records.

Step 16: Confirm the mapping tasks

After maintaining the mappings:

Click:

Confirm

Explanation:

All mapping task statuses should change to Confirmed before running migration again.

Step 17: Open the Bank instances

Return to the Bank migration object and open:

Instances

Explanation:

This screen shows the individual bank records created from the staging-table data.

Step 18: Select the bank instances

Select both bank records.

Expected rows:

US / A#####

US / Z#####

Explanation:

Both bank records must be selected so they can be migrated into the target system.

Step 19: Click Migrate

Click:

Migrate

Explanation:

This starts the actual creation of bank master records in the target SAP S/4HANA Cloud system.

Step 20: Resolve authorization issue if it appears

During your execution, migration initially failed with:

You are not authorized to create bank data for country/region US

The fix was to assign the additional business role:

Master Data Specialist - Bank Data

SAP_BR_MD_SPECIALIST_BNK

Explanation:

The migration cockpit role alone is not always enough.

Bank creation also requires bank master data authorization.

Step 21: Refresh and check migration status

After migration:

Refresh the screen.

Check the status of both bank instances.

Expected final result:

Success

Success

Explanation:

Both bank rows must finish successfully for the task to be considered complete.

Step 22: Verify in "Manage Banks - Master Data"

Open:

Manage Banks - Master Data

Search for:

US / A#####

US / Z#####

Explanation:

This is the final business verification step that proves the bank master records were created successfully in the system.

Expected Result

After this task is completed successfully:

both bank records are loaded through staging tables,

all mapping tasks are confirmed,

both migration instances complete successfully,

the two banks are visible in Manage Banks - Master Data.

NEW QUESTION # 14

SIMULATION

Create a Custom Launchpad Space and Page

Business Scenario

You are building a custom business role that will be assigned to all employees in the organization. The business role and its corresponding Launchpad Space and Page need to include the apps that have been granted through the business catalogs assigned to the business role to ensure employees have an easy time finding the relevant applications.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Assign the Launchpad Space to your custom business role. Edit the Launchpad Page to add the applications listed below as tiles (standard "preferred" square tile) with the Section Title: Self-Services.

Manage My Timesheet

Concur Travel Expense

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to complete the launchpad setup for the custom all-employee role by:

assigning the custom Launchpad Space to the business role,

editing the Launchpad Page,

creating a section titled Self-Services,

adding the required applications as standard preferred square tiles:

Manage My Timesheet

Concur Travel Expense

Business Scenario Explanation

In the earlier tasks, you created:

a custom all-employee business role,

the required business catalog assignments,

a custom launchpad space and page.

This task completes that setup by adding the actual application tiles that end users will see on the launchpad.

The goal is to make it easy for employees to find the relevant self-service applications without searching manually.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values listed in the task.

The section title must be exactly:

Self-Services

The two tiles must be:

Manage My Timesheet

Concur Travel Expense

Save after editing the page.

Prerequisites

Before doing this task, the following should already exist:

custom business role:

Z_EMPLOYEES_ALL_#####

assigned business catalogs:

SAP_HCM_BC_EMP_PC

SAP_CON_BC_CTE_ESS_PC

custom launchpad space and page created for the role

page title and description:

General

Detailed Step-by-Step Procedure

Step 1: Open the app "Maintain Business Roles"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Search for:

Maintain Business Roles

Open the app.

Explanation:

This is the app where the custom all-employee role is maintained. The launchpad space assignment and page navigation are controlled from here.

Step 2: Open the custom all-employee business role

In Maintain Business Roles:

Search for your custom business role:

Z_EMPLOYEES_ALL_#####

Open the role.

Example

If your suffix is 000013, the role is:

Z_EMPLOYEES_ALL_000013

Explanation:

You must work in the custom all-employee role because the launchpad space and page belong to this role.

Step 3: Open the Launchpad Spaces tab

Inside the role:

Click:

Launchpad Spaces

Explanation:

This tab shows which launchpad space is assigned to the role.

Step 4: Verify the Launchpad Space is assigned

Check that the assigned space exists.

In your execution, the assigned space followed this pattern:

Z_ALL_EMP_#####

Explanation:

The task says to assign the launchpad space to the custom business role.

If the space already appears in the assigned list, then this part is already complete.

If the space is not listed:

Click Add

Create or assign the required custom space

Save the role

Step 5: Open the assigned Launchpad Space

In the assigned launchpad spaces list:

Click the arrow > at the far right of the space row.

Explanation:

This opens Space Details, where the page linked to the space can be accessed.

Step 6: Open the Pages tab

In Space Details:

Click:

Pages

Explanation:

A space can contain one or more pages.

This task requires you to edit the page content.

Step 7: Open the Launchpad Page

In the Pages list:

Open the page row by clicking the arrow > at the far right.

In your run, the page followed this pattern:

Z_ALL_EMP_#####

Explanation:

This opens Page Details, where the page content can be edited.

Step 8: Open Page Content

Inside Page Details:

Click the tab:

Page Content

Explanation:

This is the area where sections and application tiles are maintained.

Step 9: Click Edit

On the Page Content screen:

Click Edit

Explanation:

The page must be in edit mode before you can create sections or add app tiles.

Step 10: Enter the section title

In the section title field, enter exactly:

Self-Services

Explanation:

This creates the section in which the required employee self-service app tiles will be placed.

The title must match the task exactly.

Step 11: Add the tile "Concur Travel Expense"

On the right side of the page content screen, in the list of apps derived from the assigned catalogs:

Find:

Concur Travel Expense

Click:

Add

Explanation:

This adds the Concur employee self-service app tile into the Self-Services section.

Step 12: Add the tile "Manage My Timesheet"

Still on the right side app list:

Find:

Manage My Timesheet

Click:

Add

Explanation:

This adds the timesheet app tile into the same Self-Services section.

Step 13: Verify both tiles are visible in the section

After adding both apps, confirm that the page content now shows:

Concur Travel Expense

Manage My Timesheet

under the section:

Self-Services

Explanation:

This confirms the tiles were placed correctly on the page.

Step 14: Save the page

Click:

Save

Explanation:

This finalizes the page changes.

If you do not save, the tiles and section will not be retained.

Step 15: Verify the role is assigned to your business user

To verify the page and tiles from the home screen, make sure the custom all-employee role is assigned to your own business user.

Open:

Maintain Business Users

Then:

Open your own user

Open Assigned Business Roles

Confirm the role is assigned:

Z_EMPLOYEES_ALL_#####

Save if needed

Explanation:

Without role assignment, the launchpad space and page may not appear on the homepage for your user.

Step 16: Refresh the homepage

Go back to Home.

Then:

Refresh the browser or reload the session

Open the page/tab:

General

Explanation:

This ensures the launchpad updates and shows the newly added content.

Step 17: Verify the result on the homepage

On the General page, verify that you can see:

section title:

Self-Services

tile:

Concur Travel Expense

tile:

Manage My Timesheet

Explanation:

This is the final proof that the task was completed successfully.

Expected Result

After this task is completed successfully:

the custom launchpad space is assigned to the business role,

the page contains a section named Self-Services,

the page shows the tiles:

Concur Travel Expense

Manage My Timesheet

the tiles are visible on the launchpad homepage under the General page.

NEW QUESTION # 15

SIMULATION

Create a Custom Launchpad Space and Page

Business Scenario

You are building a custom business role that will be assigned to all employees in the organization. The business role and its corresponding Launchpad Space and Page need to include the apps that have been granted through the business catalogs assigned to the business role to ensure employees have an easy time finding the relevant applications.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task

Create a new business role (not from a template) with the information below.

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Task 8: Create a New Business Role (Not from a Template)

Objective

The purpose of this task is to create a new custom business role for all employees in the organization. This role is intended to become the base role that will later be connected to the required business catalogs, launchpad space, and page so that employees can easily access the relevant apps.

This task explicitly says:

create a new business role

not from a template

use the exact values provided in the task

Business Scenario Explanation

You are building a role for all employees in the organization.

Unlike the earlier project-manager role, this one is not derived from a standard SAP template.

The purpose of this role is to provide a shared employee-level launchpad structure.

Later, the role will be used to:

assign business catalogs,

create a launchpad space,

create a launchpad page,

place apps on the page for employee self-service access.

In this step, the focus is only on creating the new business role with the correct identification and access category settings.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the values exactly as shown.

Do not create this role from a template.

The access categories must be set exactly as required:

Unrestricted for all categories

Save the role at the end.

Required Values

Use the following values exactly as shown in the task screenshot

Step 1: Open the app "Maintain Business Roles"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the app search.

Search for:

Maintain Business Roles

Open the app.

Explanation:

This app is used to create, maintain, copy, derive, and restrict business roles.

Since this task requires creating a brand new custom role, this is the correct place to start.

Step 2: Start creating a new business role

Inside Maintain Business Roles:

Click New

Explanation:

This task explicitly says to create a role not from a template.

So you must use New, not:

Create From Template

Create Derived Business Role

Copy

Using New creates a completely customer-defined business role.

Step 3: Enter the business role ID

In the new business role creation screen:

In Business Role ID, enter:

Z_EMPLOYEES_ALL_#####

Example

For suffix 000013:

Z_EMPLOYEES_ALL_000013

Explanation:

This is the technical identifier of the new business role.

It must match the task exactly for validation to succeed.

Step 4: Enter the business role description

In Business Role Description, enter:

All Employee Role #####

Example

For suffix 000013:

All Employee Role 000013

Explanation:

This is the readable description shown in SAP and should exactly match the exercise requirement.

Step 5: Set access categories

In the Access Categories section, set all categories to:

Write, Read, Value Help = Unrestricted

Read, Value Help = Unrestricted

Value Help = Unrestricted

Explanation:

The task explicitly says:

Access Categories: Unrestricted for all categories

So all three category dropdowns must be left or set to Unrestricted.

This means:

the role is not restricted by country, company code, or other field-level limitation in this step, this role is intended to be broadly reusable for all employees.

Step 6: Review the role before saving

Before saving, verify:

Business Role ID is correct

Business Role Description is correct

all 3 access category values are Unrestricted

Explanation:

This avoids common mistakes such as:

wrong suffix,

extra spaces,

restricted instead of unrestricted values,

creating from template accidentally.

Step 7: Save the role

Click:

Save

Explanation:

This finalizes the new business role.

Without saving, the role remains only in draft and is not actually created.

Step 8: Verify the role after save

After saving, confirm that the role is displayed with:

Business Role ID = Z_EMPLOYEES_ALL_#####

Business Role Description = All Employee Role #####

Write Access / Read Access / Value Help Access = Unrestricted

Explanation:

This is the confirmation that the role was created successfully and matches the task requirement.

Expected Result

After the task is completed successfully:

a new custom business role exists,

it was created not from a template,

the role ID and description match the required values,

all access categories are Unrestricted,

the role is saved and available for the next steps.

NEW QUESTION # 16

SIMULATION

Business Scenario You are working on an implementation project and need to create a test user in the system for demonstrating the professional services business processes to project managers during your upcoming Fit-to-Standard workshop. Follow the instructions below to create a new test user with a basic import of worker and work agreement data.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Create a new business user with the following information by importing the new user's data:

Import Name: Project Manager Test User #####

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a test user in SAP S/4HANA Cloud for demonstrating professional services business processes to project managers during a Fit-to-Standard workshop.

This task is completed by importing:

worker data

work agreement data

The import must use the exact values provided in the task.

Business Scenario Explanation

In this scenario, you need a test user that represents a Project Manager.

This user is needed so that project-management-related professional services processes can later be demonstrated in the system.

Instead of creating every record manually, SAP asks you to use the import process.

This is faster and also ensures the worker and agreement data are loaded in the correct structure.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the values exactly as provided.

Do not change spaces, punctuation, or capitalization unless the task explicitly tells you to.

A wrong value, extra space, or missing number can cause task validation failure.

If your suffix is 000013, then the values become:

Worker ID = 1000013

User Name = PM000013

First Name = Project

Last Name = Manager 000013

Email = PM000013@dummy.sap.com

Step 1: Open the app used for importing users/workers

From the SAP S/4HANA Cloud launchpad:

Log in to the system.

Open the relevant import app used in your simulation for importing worker and work agreement data.

Start creation of a new import.

Explanation:

This task is not done by manual user creation only.

The scenario specifically says to create the new business user by importing the new user's data.

The import will load the basic worker and work agreement records that are required before the business user is fully usable.

Step 2: Enter the import name

When creating the import:

In the field Import Name, enter:

Project Manager Test User #####

Replace ##### with your own 6-digit group suffix.

Example

For suffix 000013, enter:

Project Manager Test User 000013

Explanation:

The import name identifies your import package and should be entered exactly as required by the task.

Step 3: Prepare the worker data

In the worker import structure, enter these values:

Worker ID = 1#####

User Name = PM#####

Worker Type = BUP003

First Name = Project

Last Name = Manager #####

Email = PM#####@dummy.sap.com

Language = EN

Company Code = 1010

Cost Center = 10101501

Example for 000013

Worker ID = 1000013

User Name = PM000013

Last Name = Manager 000013

Email = PM000013@dummy.sap.com

Explanation:

These values define the person as a project manager test worker and connect the worker to:

the company code,

the cost center,

the default language,

and the worker type required by the scenario.

Step 4: Prepare the work agreement data

In the work agreement import structure, enter:

Start Date = today's date in YYYYMMDD format

End Date = 99991231

Example

If today's date is March 30, 2026:

Start Date = 20260330

End Date = 99991231

Explanation:

The end date 99991231 is used to indicate an open-ended validity.

This is common in SAP for a record that should remain valid indefinitely.

Step 5: Upload or enter the import data

Depending on the app behavior in your exercise:

Upload the prepared import file or

Enter the values into the import structure manually if the system provides inline entry.

Explanation:

The business scenario says the business user must be created by importing worker and work agreement data.

This means the relevant master data must be loaded into the system first before the user is fully available.

Step 6: Start the import

After all values are entered:

Validate the data if the system provides a validation option.

Start the import.

Explanation:

Validation checks whether:

required fields are filled,

date formats are correct,

codes like BUP003, 1010, and 10101501 are valid,

and the import structure is complete.

Step 7: Wait for the import to complete

Monitor the import process.

Wait until the import shows success or completed status.

Explanation:

Only after the import is complete will the worker and work agreement records exist in the system and be usable for further user setup and role assignment.

Step 8: Verify the imported worker/business user

After the import finishes:

Open the relevant business user / worker maintenance app.

Search using:

Worker ID

or User Name

Confirm that the imported user exists.

Explanation:

This step ensures the imported data was actually created and is available for later process demonstrations.

Expected Result

After the import is completed successfully:

a new test worker/user exists in the system,

the worker has the required professional-services identity,

the work agreement is valid,

the user can be used in later project manager demonstrations.

□

NEW QUESTION # 17

SIMULATION

Note: In this practical certification exam, you will only be given high-level instructions. The step descriptions are complete and tested to work. They are not detailed, as this is a test of your knowledge of navigating the system on your own.

Caution: Please make sure you are always using your assigned group number. The last 6 digits are denoted as ##### in the following tasks. Your results will not be recorded if you are not using your own group number. To find your group number: Select your user in the top right corner. You will see your user name with a series of numbers. Use the last 6 digits as your group number

Caution: To keep the system running smoothly and avoid unnecessary costs, please follow the assigned exercises carefully when using the SAP Landscape. Avoid going beyond the exercise scope and only use your group number to help maintain a stable and efficient environment for everyone.

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Purpose: Identify your own six-digit suffix and use it consistently in every task.

Open the user menu at the top-right of SAP S/4HANA Cloud.

Read your user name and note the last six digits.

Use those last six digits in every place the task PDF shows #####.

Example used in this guide: 000013

NEW QUESTION # 18

.....

You can take the SAP C_S4CPB desktop practice exam on Windows computers. Itbraindumps has come up with this new style format in which you can easily track the records of your previous progress. So, you will understand how much you have improved or how much you need improvement for passing exam. The SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602) (C_S4CPB) practice exam will also boost your time management skills.

Real C_S4CPB Dumps Free: https://www.itbraindumps.com/C_S4CPB_exam.html

SAP Cost Effective C_S4CPB Dumps The important items can be imprinted on examinees' mind by the practice system of SOFT that knocks out dull pure memory style which is dull and becomes dated, Therefore, you can be one of them and achieve full of what you want such as get the certificate with C_S4CPB study materials: SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602), have the desirable job you always dreaming of and get promotion in management groups in your company in the near future, You don't expose your financial information to us during your payment of C_S4CPB training materials.
