## Pass Guaranteed 2026 SPLK-1002: Splunk Core Certified Power User Exam Pass-Sure Reliable Exam Test

BraindumpsVCE Splunk Core Certified Power User Exam Certification Exam come in three different formats so that the users can choose their desired design and prepare Splunk Core Certified Power User Exam (SPLK-1002) exam according to their needs. The first we will discuss here is the PDF file of real Splunk Core Certified Power User Exam (SPLK-1002) exam questions. It can be taken to any place via laptops, tablets, and smartphones. In addition, you can print these Splunk Core Certified Power User Exam (SPLK-1002) PDF questions for paper study in this format of BraindumpsVCE product frees you from restrictions of time and place as you can study SPLK-1002 exam questions from your comfort zone in your spare time.

## Splunk Core Certified Power User Exam Sample Questions (Q221-Q226):

### NEW QUESTION # 221

Select this in the fields sidebar to automatically pipe you search results to the rare command

- A. events with this field
- **B. rare values**
- C. top values by time
- D. top values

**Answer: B**

### NEW QUESTION # 222

Which of the following statements best describes a macro?

- **A. A macro is a portion of a search that can be reused in multiple place**
- B. A macro is a knowledge object that enables you to schedule searches for specific events.
- C. A macro is a way to associate an additional (new) name with an existing field name.
- D. A macro is a method of categorizing events based on a search.

**Answer: A**

Explanation:

The correct answer is C. A macro is a portion of a search that can be reused in multiple places.

A macro is a way to reuse a piece of SPL code in different searches. A macro can be any part of a search, such as an eval statement or a search term, and does not need to be a complete command. A macro can also take arguments, which are variables that can be replaced by different values when the macro is called. A macro can also contain another macro within it, which is called a nested macro<sup>1</sup>.

To create a macro, you need to define its name, definition, arguments, and description in the Settings > Advanced Search > Search Macros page in Splunk Web or in the macros.conf file. To use a macro in a search, you need to enclose the macro name in backtick characters ( ` ) and provide values for the arguments if any<sup>1</sup>.

For example, if you have a macro named my\_macro that takes one argument named object and has the following definition:

```
search sourcetype=object
```

You can use it in a search by writing:

```
my_macro(web)
```

This will expand the macro and run the following SPL code:

```
search sourcetype=web
```

The benefits of using macros are that they can simplify complex searches, reduce errors, improve readability, and promote consistency<sup>1</sup>.

The other options are not correct because they describe other types of knowledge objects in Splunk, not macros. These objects are:

A: An event type is a method of categorizing events based on a search. An event type assigns a label to events that match a specific search criteria. Event types can be used to filter and group events, create alerts, or generate reports<sup>2</sup>.

B: A field alias is a way to associate an additional (new) name with an existing field name. A field alias can be used to normalize fields from different sources that have different names but represent the same data. Field aliases can also be used to rename fields for clarity or convenience<sup>3</sup>.

D: An alert is a knowledge object that enables you to schedule searches for specific events and trigger actions when certain conditions are met. An alert can be used to monitor your data for anomalies, errors, or other patterns of interest and notify you or others when they occur<sup>4</sup>.

References:

About event types

About field aliases

About alerts

Define search macros in Settings

Use search macros in searches

### NEW QUESTION # 223

What does the fillnull command replace null values with, if the value argument is not specified?

- A. NULL
- B. NaN
- C. N/A
- **D. 0**

**Answer: D**

Explanation:

Reference: <https://answers.splunk.com/answers/653427/fillnull-doesnt-work-without-specifying-a-field.html> The fillnull command is a search command that replaces null values with a specified value or 0 if no value is specified. Null values are values that are missing, empty, or undefined in Splunk. The fillnull command can replace null values for all fields or for specific fields. The fillnull command can take an optional argument called value that specifies the value to replace null values with. If no value argument is specified, the fillnull command will replace null values with 0 by default.

#### NEW QUESTION # 224

Which tool uses data models to generate reports and dashboard panels without using SPL?

- A. Datasets
- **B. Pivot**
- C. splunk CIM
- D. Visualization tab

**Answer: B**

Explanation:

The correct answer is B. Pivot.

In Splunk, Pivot is a tool that uses data models to generate reports and dashboard panels without the need for users to write or understand Splunk's Search Processing Language (SPL). Data models enable users of Pivot to create compelling reports and dashboards. When a Pivot user designs a pivot report, they select the data model that represents the category of event data that they want to work with. Then they select a dataset within that data model that represents the specific dataset on which they want to report. This makes Pivot a powerful tool for users who need to create visualizations but do not have a deep understanding of SPL.

#### NEW QUESTION # 225

Which of the following statements describe GET workflow actions?

- **A. GET workflow actions can be configured to open the URT link in the current window or in a new window**
- B. Label names for GET workflow actions must include a field name surrounded by dollar signs.
- C. Configuration of GET workflow actions includes choosing a sourcetype.
- D. GET workflow actions must be configured with POST arguments.

**Answer: A**

Explanation:

Explanation

GET workflow actions are custom actions that open a URL link when you click on a field value in your search results. GET workflow actions can be configured with various options, such as label name, base URL, URI parameters, app context, etc. One of the options is to choose whether to open the URL link in the current window or in a new window. GET workflow actions do not have to be configured with POST arguments, as they use GET method to send requests to web servers. Configuration of GET workflow actions does not include choosing a sourcetype, as they do not generate any data in Splunk. Label names for GET workflow actions must include a field name surrounded by dollar signs, as this indicates the field value that will be used to replace the variable in the URL link.

#### NEW QUESTION # 226

.....

We have always been known as the superior after sale service provider, since we all tend to take lead of the whole process after you choose our SPLK-1002 exam questions. So you have no need to trouble about our SPLK-1002 study guide, if you have any

questions, we will instantly response to you. Our SPLK-1002 Training Materials will continue to pursue our passion for better performance and comprehensive service of SPLK-1002 exam.
