## Three Formats of ActualCollection Practice Material

It is impossible for everyone to concentrate on one thing for a long time, because as time goes by, people's attention will gradually decrease. Our Mule-101 test preparation materials can teach users how to arrange their time. And our Mule-101 learn materials are arranged for the user reasonable learning time, allow the user to try to avoid long time continuous use of our Mule-101 Exam Questions, so that we can better let users in the most concentrated attention to efficient learning on our Mule-101 training guide.

## Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q23-Q28):

### NEW QUESTION # 23

Which Exchange asset type represents a complete API specification in RAML or OAS format?

- **A. REST APIs**
- B. API Spec Fragments
- C. SOAP APIs
- D. Connectors

**Answer: A**

Explanation:

REST APIs (Asset Type): In Anypoint Exchange and Design Center, when you create a new project to define a full API specification (using RAML or OAS), the resulting asset type is categorized as a "REST API." API Spec Fragments: These are parts of a specification (like a specific Data Type, Trait, or Security Scheme) designed to be reused across multiple different API specs. They are not "complete" APIs on their own.

SOAP APIs: Use WSDL (XML), not RAML/OAS.

### NEW QUESTION # 24

What is an example of data confidentiality?

- A. Encrypting a file containing personally identifiable information (PII)
- B. De-masking a person's Social Security number while inserting it into a database
- C. Providing a server's private key to a client for secure decryption of data during a two-way SSL handshake
- D. Signing a file digitally and sending it using a file transfer mechanism

**Answer: A**

Explanation:

Confidentiality: This security concept ensures that information is not made available or disclosed to unauthorized individuals, entities, or processes.

Encryption (Option A): Transforming readable data (plaintext) into unreadable data (ciphertext) is the primary technical control for confidentiality. If a file with PII is stolen but encrypted, the confidentiality is maintained.

Why others are incorrect:

Signing (C): Ensures Integrity (proving the data hasn't changed), not confidentiality (the data is still readable).

De-masking (B): Removes protection.

Providing Private Key (D): This is a severe security breach, not a protection mechanism.

### NEW QUESTION # 25

An application load balancer routes requests to a RESTful web API secured by Anypoint Flex Gateway.

- A. HTTPS
- B. SFTP
- C. LDAP
- D. SMTP

**Answer: A**

Explanation:

RESTful APIs: By definition, REST relies on the HTTP protocol (Hypertext Transfer Protocol).

Security: When an API is "secured," it almost universally implies the use of TLS/SSL encryption, turning HTTP into HTTPS.

Load Balancers: Application Load Balancers (ALBs) operate at Layer 7 (Application Layer) and are designed to route HTTP/HTTPS traffic.

Why others are incorrect:

SMTP: Simple Mail Transfer Protocol (Email).

SFTP: Secure File Transfer Protocol (Files).

LDAP: Lightweight Directory Access Protocol (Identity/User lookup).

None of these are used for standard REST API routing.

### NEW QUESTION # 26

A DevOps team has adequate observability of individual system behavior and performance, but it struggles to track the entire lifecycle of each request across different microservices. Which additional observability approach should this team consider adopting?

- A. Tracing
- B. Analytics
- C. Data mining
- D. Metrics

**Answer: A**

Explanation:

The Challenge: In a microservices architecture, a single user request might traverse dozens of different services. If an error occurs or latency is high, looking at the logs of just one service isn't enough.

Distributed Tracing: This is the specific technology used to track a request as it hops between services.

How it works: It assigns a unique Trace ID (Correlation ID) to the request at the entry point. This ID is passed to every downstream service. Tracing tools (like Anypoint Monitoring's Telemetry or Jaeger) verify the full path, showing exactly how long the request spent in each hop.

### NEW QUESTION # 27

According to the National Institute of Standards and Technology (NIST), which cloud computing deployment model describes a

composition of two or more distinct clouds that support data and application portability?

- A. Hybrid cloud
- B. Community cloud
- C. Public cloud
- D. Private cloud

**Answer: A**

Explanation:

NIST Definition: The NIST definition of Hybrid Cloud is explicitly "a composition of two or more distinct cloud infrastructures (private, community, or public) that remain unique entities, but are bound together by standardized or proprietary technology that enables data and application portability." 1 MuleSoft Context: This is highly relevant to MuleSoft's Runtime Plane options. A customer might run some apps in CloudHub (Public Cloud) and others on Runtime Fabric (Private Data Center), creating a Hybrid deployment to ensure data portability and local processing where needed.

Why others are incorrect:

Public Cloud: Open for open use by the general public (e.g., AWS, Azure).

Private Cloud: Exclusive use by a single organization.

Community Cloud: Exclusive use by a specific community of consumers from organizations that have shared concerns.

## NEW QUESTION # 28

.....

As a responsible company with great reputation among the market, we trained our staff and employees with strict beliefs to help you with any problems about our Mule-101 Learning materials 24/7. Even you have finished buying our Mule-101 Study Guide with us, we still be around you with considerate services. In a word, our service will offer you the best help on Our Mule-101 exam quiz. Just click on the contact button, you will receive our service.
