New JN0-336 Examcollection 100% Pass | High-quality JN0-336 Free Dumps: Security, Specialist (JNCIS-SEC)

It is a matter of common sense that pass rate of a kind of JN0-336 exam torrent is the only standard to testify weather it is effective and useful. I believe that you already have a general idea about the advantages of our JN0-336 exam question, but now I would like to show you the greatest strength of our JN0-336 Guide Torrent --the highest pass rate. According to the statistics, the pass rate among our customers who prepared the exam under the guidance of our JN0-336 guide torrent has reached as high as 98% to 100% with only practicing our JN0-336 exam torrent for 20 to 30 hours.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q80-Q85):

NEW QUESTION # 80

Which two statements are true about application identification? (Choose two.)

- A. Application identification can identify nested applications that are within Layer 7.
- B. Application signatures are the same as IDP signatures.
- C. Application signatures are not the same as IDP signatures.
- D. Application identification cannot identify nested applications that are within Layer 7.

Answer: A,C

Explanation:

Application identification is a feature that enables SRX Series devices to identify and classify network traffic based on application signatures or custom rules. Application identification can enhance security, visibility, and control over network applications.

Two statements that are true about application identification are:

Application identification can identify nested applications that are within Layer 7: Nested applications are applications that run within another application protocol, such as HTTP or SSL. For example, Facebook or YouTube are nested applications within HTTP.

Application identification can identify nested applications by inspecting the application payload and matching it against predefined or custom signatures.

Application signatures are not the same as IDP signatures: Application signatures are patterns of bytes or strings that uniquely identify an application protocol or a nested application. IDP signatures are patterns of bytes or strings that indicate an attack or an exploit against a vulnerability. Application signatures are used for application identification and classification, while IDP signatures are used for intrusion detection and prevention.

Reference: = [Application Identification Overview], [Application Identification Concepts], [Understanding Signature Rules and Protocol Anomaly Rules]

NEW QUESTION # 81

Exhibit

Referring to the exhibit which statement is true?

- A. SSL proxy leverages pre-match result
- B. SSL proxy functions will ignore the session.
- C. SSL proxy must wait for return traffic for the final match to occur.
- D. SSL proxy leverages post-match results.

Answer: C

NEW QUESTION # 82

Which two features are configurable on Juniper Secure Analytics (JSA) to ensure that alerts are triggered when matching certain criteria? (Choose two.)

- A. events
- B. building blocks
- C. tests
- D. assets

Answer: B,C

Explanation:

Building blocks in JSA are reusable components that define specific attributes or behaviors in the network traffic. They can be used to create complex criteria for alerts. By combining multiple building blocks, you can specify detailed conditions under which alerts should be triggered, such as combinations of events or specific sequences of actions within the network.

Tests in JSA are conditions or rules that analyze log or flow data to detect unusual or malicious activity.

You can configure tests to evaluate the data against predefined criteria, which, when met, will trigger alerts. These tests are essential for identifying potential security incidents and ensuring that relevant alerts are issued in a timely manner.

NEW QUESTION # 83

While working on an SRX firewall, you execute the show security policies policy-name <name> detail command.

Which function does this command accomplish?

- A. It shows policy counters for a configured policy.
- B. It displays details about the default security policy.
- C. It shows the system log files for the local SRX Series device.
- D. It identifies the different custom policies enabled.

Answer: A

Explanation:

The function that the show security policies policy-name <name> detail command accomplishes is showing policy counters for a

configured policy. Policy counters are statistics that indicate how many times a policy has been matched by traffic and what actions have been taken by the policy. Policy counters can help you monitor and troubleshoot the performance and effectiveness of your security policies. The show security policies policy-name <name> detail command displays detailed information about a specific policy, such as its source zone, destination zone, description, state, hit count, byte count, packet count, action count, and session count.

Reference: = show security policies, show security policies information, [SRX] How to troubleshoot a security policy that is not passing data

NEW QUESTION # 84

Which two statements are correct about Juniper ATP Cloud? (Choose two.)

- A. Once the target threshold is met, Juniper ATP Cloud continues looking for threats from 0 to 5 minutes.
- B. The threat levels range from 0-100.
- C. Once the target threshold is met, Juniper ATP Cloud continues looking for threats levels range from 0 to 10 minutes.
- D. The threat levels range from 0-10.

Answer: B,D

Explanation:

In many threat intelligence and evaluation systems, including Juniper ATP Cloud, the threat levels are often scored on a scale to provide a quick reference of the potential risk associated with a threat. A common range for these threat levels is from 0 to 10, with 0 representing minimal or no threat and 10 representing a severe threat.

Alternatively, some systems may use a more granular scoring system ranging from 0 to 100, providing a more nuanced assessment of threat levels. This range allows for finer differentiation between the levels of threat severity.

NEW QUESTION # 85

.....

You may find that on our website, we have free renewal policy for customers who have bought our JN0-336 practice quiz. You can enjoy one year free updated service. This policy greatly increase the pass percentage of the candidates if they can't pass in one time or in the limited date. And they can enjoy 50% off if they buy them again one year later. All in all, our service is completely considerate. Come to experience our JN0-336 Training Materials.
