Valid NSE6_OT5_AR-7.6 Test Dumps Pdf, Latest NSE6_OT5_AR-7.6 Exam Topics

Studying for attending Fortinet NSE 6 - OT Security 7.6 Architect exam pays attention to the method. The good method often can bring the result with half the effort, therefore we in the examination time, and also should know some test-taking skill. The NSE6_OT5_AR-7.6 quiz guide on the basis of summarizing the past years, found that many of the questions, the answers have certain rules can be found, either subjective or objective questions, we can find in the corresponding module of similar things in common. To this end, the Fortinet NSE 6 - OT Security 7.6 Architect exam dumps have summarized some types of questions in the qualification examination, so that users will not be confused when they take part in the exam, to have no emphatic answers. It can be said that the template of these questions can be completely applied. The user only needs to write out the routine and step points of the NSE6_OT5_AR-7.6 test material, so that we can get good results in the exams.

Fortinet NSE 6 - OT Security 7.6 Architect Sample Questions (Q74-Q79):

NEW QUESTION # 74

To increase security protection in an OT network, how does application control on FortiGate detect industrial traffic?

- A. By inspecting software and software-based vulnerabilities
- B. By inspecting applications with more granularity by inspecting subapplication traffic
- C. By inspecting applications only on nonprotected traffic
- D. By inspecting protocols used in the application traffic

Answer: D

Explanation:

FortiGate's application control identifies OT traffic by deep-inspecting the industrial protocols carried in the flows (Modbus, DNP3, IEC-104, etc.). It matches protocol signatures to classify the application and enforce policy.

NEW QUESTION # 75

Refer to the exhibit. You are creating a new operational technology (OT) rule to monitor Modbus protocol traffic on FortiSIEM. Which action must you take to ensure that all Modbus messages on the network match the rule?

- A. In the Aggregate section, set the attribute value to equal to or greater than 0.
- B. Add a new condition to filter Modbus traffic based on the source TCP/UDP port.
- C. In the Group By section, remove all attributes that are not configured in the Filter section.
- D. The condition on the SubPattern filter must use the AND logical operator.

Answer: A

Explanation:

The current Aggregate condition is set to COUNT(Matched Events) >= 1, which only triggers the rule after at least one event. To ensure all Modbus messages (including the first one) match the rule, the condition must be >= 0, so every event is considered, including the very first occurrence.

NEW QUESTION # 76

Which industrial protocol does not support VLANs? (Choose one answer)

- A. Modbus over TCP
- B. Ethernet over industrial protocol
- C. EtherCAT
- D. Ethernet POWERLINK

Answer: C

NEW QUESTION # 77

How can you achieve remote access and internet availability in an OT network?

- A. Add additional internal firewalls to access OT devices.
- B. Create more access policies to prevent unauthorized access.
- C. Implement SD-WAN to manage traffic on each ISP link.
- D. Create a back-end backup network as a redundancy measure.

Answer: C

Explanation:

SD-WAN provides reliable and efficient management of multiple ISP links, ensuring high availability and optimized traffic routing. It offers redundancy and performance improvements critical for OT networks where continuous availability is essential.

SD-WAN can dynamically route traffic, maintain session persistence, and provide secure connectivity between remote and internal OT environments.

NEW QUESTION # 78

An OT administrator has configured FSSO and local firewall authentication. A user who is part of a user group is not prompted for credentials during authentication.

What is a possible reason?

- A. Two-factor authentication is not configured with RADIUS authentication method
- B. FortiGate determined the user by passive authentication
- C. FortiNAC determined the user by DHCP fingerprint method
- D. The user was determined by Security Fabric

Answer: B

Explanation:

Fortinet Single Sign-On (FSSO) includes a method called passive authentication. This allows FortiGate to identify and authenticate a user based on their existing Windows login session without prompting the user again for credentials.

Because of this passive authentication, the user will not see a prompt for credentials when accessing resources protected by FortiGate.

This behavior is expected in FSSO deployments where FortiGate can retrieve user login information from the domain controller or through the FSSO agent.

The other options (Security Fabric, two-factor with RADIUS, FortiNAC DHCP fingerprint) are less relevant to this scenario or would not explain the lack of prompt during authentication.

NEW QUESTION # 79
