Best of luck in the CyberArk CPC-CDE-RECERT exam and career!!!

CyberArk CDE-CPC Recertification Sample Questions (Q81-Q86):

NEW QUESTION # 81

What is recommended when applying GPO (Group Policy Object) hardening for in-domain PSM servers?

- A. After installation, remove the PSM servers from the domain to maximize security.
- **B. Place the servers which have PSM installed into a dedicated organizational unit (OU).**
- C. Apply the GPO hardening to all hosts that end-users will connect to through the PSM.
- D. Apply the GPO provided by CyberArk onto the servers after other GPOs.

Answer: B

Explanation:

CyberArk's PSM hardening procedure for In Domain deployments explicitly recommends linking the hardening GPO to a dedicated OU and ensuring the CyberArk servers are located under that OU so the hardening GPO does not affect any other server. This directly matches D.

NEW QUESTION # 82

You are configuring firewall rules between the Privilege Cloud components and the Privilege Cloud. Which firewall rules should be

set up to allow connections?

- A. from the Privilege Cloud components to CyberArk.com
- B. from the CyberArk Privilege Cloud to the Privilege Cloud components
- C. from the Privilege Cloud components to the CyberArk Privilege Cloud
C bi-directionally between the Privilege Cloud components and the CyberArk Privilege cloud

Answer: C

Explanation:

<https://docs.cyberark.com/privilege-cloud-standard/latest/en/content/privilege%20cloud/privcloud-sys-req- networks.htm>

NEW QUESTION # 83

What is a requirement for increasing the redundancy of PSMs?

- A. Install the Vault in an HA cluster.
- B. Set it by adding parameters to the basic_PSM.ini configuration file.
- C. Use a load balancer.
- D. CPM must be in all data centers.

Answer: C

Explanation:

CyberArk's Privilege Cloud guidance for PSM high availability explicitly ties multiple PSM instances to high availability and load balancing implementations, i.e., redundancy is achieved by deploying multiple PSMs and placing them behind a load balancer.

NEW QUESTION # 84

You are working with a customer who needs to create a new Safe Design. The customer wants to define a specific role named "Simple User" giving access to the Connect button only. Which rights should be given to this role on the Safes? (Choose two.)

- A. Use Accounts
- B. Create folders
- C. Update account properties
- D. View audit log
- E. List accounts

Answer: A,E

Explanation:

CyberArk's Safe permission definitions state:

* List accounts allows the user to view the Accounts/Files list (so they can see the account to connect to).

* Use Accounts explicitly enables the user to log on through PSM by clicking the "Connect" /

"Connect with account" button from the Accounts List or Account Details.

Therefore, the minimum Safe rights to allow "Connect only" are List accounts (C) + Use Accounts (A).

NEW QUESTION # 85

(Typing correction / missing stem noted)

Your last item only lists answer choices (no question text). Based on Privilege Cloud documentation, these choices most commonly appear with the question:

"Which tools can be used to upgrade Privilege Cloud Connector components (CPM/PSM)?" (Choose two.)

- A. Privilege Cloud Auto Installer
- B. Connector Configurator
- C. Connector Management Installer
- D. Component Installer
- E. Privilege Cloud Installer

Answer: C,E

Explanation:

CyberArk documents that for upgrading Privilege Cloud connector components, there are two upgrade tools:

* Connector Management installer (recommended)

* Privilege Cloud installer (legacy)

That corresponds to B and C.

NEW QUESTION # 86

.....

Consider sitting for an CyberArk CDE-CPC Recertification exam and discovering that the practice materials you've been using are incorrect and useless. The technical staff at PassExamDumps has gone through the CyberArk certification process and knows the need to be realistic and exact. Hundreds of professionals worldwide examine and test every CyberArk CPC-CDE-RECERT Practice Exam regularly.
