

Quiz 2026 Huawei H12-725_V4.0 Latest Reliable Test Test

BONUS!!! Download part of Prep4sures H12-725_V4.0 dumps for free: <https://drive.google.com/open?id=1x1f2dTuiS5JmHu535MpFxSbBN4RtR6m>

In the course of your study, the test engine of H12-725_V4.0 actual exam will be convenient to strengthen the weaknesses in the learning process. This can be used as an alternative to the process of sorting out the wrong questions of H12-725_V4.0 learning torrent in peacetime learning, which not only help you save time, but also makes you more focused in the follow-up learning process with our H12-725_V4.0 Learning Materials. Choose our H12-725_V4.0 guide materials and you will be grateful for your right decision.

Huawei H12-725_V4.0 (HCIP-Security V4.0) Certification Exam is ideal for security professionals who want to enhance their skills and knowledge in the field of security. HCIP-Security V4.0 certification exam provides a great opportunity for candidates to demonstrate their expertise in Huawei's security solutions and become recognized as experts in the field. With the HCIP-Security V4.0 certification, candidates can enhance their career prospects and open up new doors of opportunities in the field of security. HCIP-Security V4.0 certification also provides a solid foundation for candidates to pursue higher-level certifications, such as the H12-731_V2.0 (HCIE-Security V2.0) certification.

H12-725_V4.0 Exam Actual Tests - Braindump H12-725_V4.0 Pdf

Someone asked, where is success? Then I tell you, success is in Prep4sures. Select Prep4sures is to choose success. Prep4sures's Huawei H12-725_V4.0 exam training materials can help all candidates to pass the IT certification exam. Through the use of a lot of candidates, Prep4sures's Huawei H12-725_V4.0 Exam Training materials is get a great response around candidates, and to establish a good reputation. This is turn out that select Prep4sures's Huawei H12-725_V4.0 exam training materials is to choose success.

Huawei HCIP-Security V4.0 Sample Questions (Q60-Q65):

NEW QUESTION # 60

When an IPsec VPN is established in aggressive mode, AH+ESP can be used to encapsulate packets in NAT traversal scenarios.

- A. TRUE
- B. FALSE

Answer: B

Explanation:

Comprehensive and Detailed Explanation:

- * Aggressive mode is a faster IKE Phase 1 negotiation method but does not support NAT traversal (NAT-T) with AH.
- * NAT-T only works with ESP, because:
- * AH includes the original IP header in its integrity check, which breaks when NAT modifies the IP address.
- * ESP works with NAT-T since it does not include the original IP header in its integrity check.
- * Why is this statement false?
- * AH does not support NAT-T, so AH+ESP cannot be used in NAT traversal scenarios.

HCIP-Security References:

- * Huawei HCIP-Security Guide # IPsec VPN NAT Traversal

NEW QUESTION # 61

The Nginx application is deployed on a Linux host. By checking Nginx logs, O&M engineers can obtain the complete URL information submitted by users and determine whether the Linux host is under SQL injection attacks.

- A. TRUE
- B. FALSE

Answer: A

Explanation:

Comprehensive and Detailed Explanation:

- * Nginx logs store detailed HTTP request information, including:
- * Requested URLs
- * Client IP addresses
- * Query parameters (which may contain SQL injection attempts)
- * SQL injection detection using logs:
- * Suspicious SQL keywords in GET/POST requests (e.g., ' OR 1=1 -- or UNION SELECT).
- * Repeated attack attempts from a single source IP.
- * Why is this statement true?
- * Nginx logs provide full request details, enabling engineers to detect SQL injection attempts.

HCIP-Security References:

- * Huawei HCIP-Security Guide # Web Attack Detection & Log Analysis

NEW QUESTION # 62

The Common Vulnerability Scoring System (CVSS) is a widely used open standard for vulnerability scoring. It uses a modular scoring system. Which of the following is not included in the CVSS?

- A. Base
- B. Environmental
- C. Temporal
- D. Spatial

Answer: D

Explanation:

Comprehensive and Detailed Explanation:

- * CVSS (Common Vulnerability Scoring System) is used to evaluate the severity of security vulnerabilities.
- * It consists of three metric groups:
- * A. Temporal # Measures how the vulnerability changes over time.
- * B. Base # Measures the inherent severity of the vulnerability.
- * C. Environmental # Measures the impact based on the user's specific environment.
- * Why is D incorrect?
- * "Spatial" is not a part of the CVSS scoring system.

HCIP-Security References:

- * Huawei HCIP-Security Guide # CVSS and Risk Scoring

NEW QUESTION # 63

During deployment of Portal authentication, an authentication-free rule profile needs to be configured to ensure Portal pages can be opened on authentication terminals. To achieve this purpose, the following traffic needs to be permitted in the authentication-free rule profile: DNS resolution traffic of user terminals, traffic from user terminals for accessing Portal pages, and traffic from user terminals to the RADIUS server.

- A. TRUE
- B. FALSE

Answer: A

Explanation:

Comprehensive and Detailed Explanation:

- * Authentication-free rules allow unauthenticated users to access essential services before login.
- * The following traffic must be allowed before authentication:
- * DNS traffic# Users need to resolve domain names for the Portal page.
- * Portal page access# The captive portal must be reachable.
- * RADIUS server communication# Users must authenticate via RADIUS.
- * Why is this statement true?
- * Without these authentication-free rules, users would be unable to reach the Portal login page.

HCIP-Security References:

- * Huawei HCIP-Security Guide # Portal Authentication-Free Rules

NEW QUESTION # 64

Match the description about virtual systems and VPN instances.

Virtual system		Services and routes can be isolated.
VPN instance		Only route isolation can be implemented.
		VPN instances are automatically generated.
		An instance needs to be manually created.

Answer:

Explanation:

Virtual system	Virtual system	Services and routes can be isolated.
VPN instance	VPN instance	Only route isolation can be implemented.
	VPN instance	VPN instances are automatically generated.
	Virtual system	An instance needs to be manually created.

Explanation:

1. Virtual System # Services and routes can be isolated.
 - * A virtual system (VS) in Huawei firewalls is a fully isolated security instance within a single physical firewall.
 - * Each virtual system has separate services, routing tables, policies, and security rules, ensuring full isolation between different users or tenants.
2. VPN Instance # Only route isolation can be implemented.

* AVPN instance (VRF - Virtual Routing and Forwarding) provides route isolation for different customer networks but does not isolate services or security policies.

* This is typically used in MPLS VPN deployments where different customers share the same physical device but need isolated routing tables.

3. VPN Instance # VPN instances are automatically generated.

* In some MPLS VPN or SDN-managed networks, VPN instances can be automatically created when customer configurations are pushed via controllers.

* Dynamic routing protocols (e.g., BGP/MPLS VPN) can automatically generate VRF instances based on network policies.

4. Virtual System # An instance needs to be manually created.

* Unlike VPN instances, virtual systems must be manually created by an administrator on the firewall.

* Each virtual system functions as a completely independent firewall, requiring manual configuration of interfaces, policies, and routing settings.

NEW QUESTION # 65

.....

In order to have better life, attending certification exams and obtaining certifications will be essential on the path to success. H12-725_V4.0 latest test cram sheet will help you achieve your goal. Only if you receive the certificate the companies require you can have the opportunities for raising salary and promotion. Thousands of companies think highly of this certification. You will be popular if you pass exam with H12-725_V4.0 Latest Test Cram sheet.
