

Valid SPLK-2002 Learning Materials - SPLK-2002 Pdf Braindumps

2026 Latest PassSureExam SPLK-2002 PDF Dumps and SPLK-2002 Exam Engine Free Share: <https://drive.google.com/open?id=1XW45NUULmDggbLdRFf29Pg7eM-yis1RF>

Once the clients order our SPLK-2002 cram training materials we will send the SPLK-2002 exam questions quickly by mails. The clients abroad only need to fill in correct mails and then they get our SPLK-2002 training guide conveniently. Our SPLK-2002 cram training materials provide the version with the language domestically and the version with the foreign countries' language so that the clients at home and abroad can use our SPLK-2002 Study Tool conveniently. And after study for 20 to 30 hours, you can pass the SPLK-2002 exam with ease.

Splunk SPLK-2002 exam covers a wide range of topics, including search processing and optimization, data lifecycle management, security and authentication, Splunk deployment and configuration, and advanced dashboard development. Candidates are expected to have a deep understanding of Splunk's architecture, search language, data models, and field extractions.

To be eligible for the Splunk SPLK-2002 Exam, candidates must have at least two years of experience in designing and deploying Splunk solutions. They must also have completed the Splunk Enterprise Certified Architect certification path, which includes the completion of Splunk Fundamentals I & II, Splunk for Enterprise Security, and Splunk App Development courses. Passing the SPLK-2002 Exam demonstrates a candidate's competency in architecting and deploying complex Splunk solutions in large-scale environments. Moreover, it validates the candidate's ability to effectively manage data and ensure the security of Splunk deployments.

Splunk SPLK-2002 certification exam is designed for professionals who wish to demonstrate their expertise in using Splunk

Enterprise software to analyze and manage machine-generated data. Splunk Enterprise Certified Architect certification exam is targeted towards experienced Splunk users who have the necessary knowledge and skills to design and deploy complex Splunk environments, develop advanced searches and reports, and troubleshoot Splunk performance issues.

SPLK-2002 Pdf Braindumps | New SPLK-2002 Exam Simulator

The Splunk SPLK-2002 practice tests on this software will allow you to self-assess your progress. It also allows you to schedule your Splunk SPLK-2002 practice exam. It imitates the actual pattern of the SPLK-2002 Exam. This format works on Windows-based devices and requires no internet connection. The dedicated support team works hard to resolve any problem at any time.

Splunk Enterprise Certified Architect Sample Questions (Q156-Q161):

NEW QUESTION # 156

Which Splunk internal index contains license-related events?

- A. `_license`
- B. `_audit`
- C. `_introspection`
- D. `_internal`

Answer: D

Explanation:

Explanation/Reference: <https://answers.splunk.com/answers/579494/how-to-display-license-consumed-by-an-index-over-2.html>

NEW QUESTION # 157

The guidance Splunk gives for estimating size on for syslog data is 50% of original data size. How does this divide between files in the index?

- A. rawdata is: 40%, tsidx is: 10%
- B. rawdata is: 15%, tsidx is: 35%
- C. rawdata is: 35%, tsidx is: 15%
- D. rawdata is: 10%, tsidx is: 40%

Answer: B

Explanation:

The guidance Splunk gives for estimating size on for syslog data is 50% of original data size. This divides between files in the index as follows: rawdata is 15%, tsidx is 35%. The rawdata is the compressed version of the original data, which typically takes about 15% of the original data size. The tsidx is the index file that contains the time-series metadata and the inverted index, which typically takes about 35% of the original data size. The total size of the rawdata and the tsidx is about 50% of the original data size. For more information, see [Estimate your storage requirements] in the Splunk documentation.

NEW QUESTION # 158

What is the algorithm used to determine captaincy in a Splunk search head cluster?

- A. Rapt distributed consensus.
- B. Rift distributed consensus.
- C. Round-robin distribution consensus.
- D. Raft distributed consensus.

Answer: D

Explanation:

Explanation

The algorithm used to determine captaincy in a Splunk search head cluster is Raft distributed consensus. Raft is a consensus algorithm that is used to elect a leader among a group of nodes in a distributed system. In a Splunk search head cluster, Raft is used to elect a captain among the cluster members. The captain is the cluster member that is responsible for coordinating the search activities, replicating the configurations and apps, and pushing the knowledge bundles to the search peers. The captain is dynamically elected based on various criteria, such as CPU load, network latency, and search load. The captain can change over time, depending on the availability and performance of the cluster members. Rapt, Riff, and Round-robin are not valid algorithms for determining captaincy in a Splunk search head cluster

NEW QUESTION # 159

Which of the following statements describe licensing in a clustered Splunk deployment? (Select all that apply.)

- A. Each cluster member requires its own clustering license.
- B. Replicated data does not count against licensing.
- C. Cluster members must share the same license pool and license master.
- D. Free licenses do not support clustering.

Answer: B,D

Explanation:

The following statements describe licensing in a clustered Splunk deployment: Free licenses do not support clustering, and replicated data does not count against licensing. Free licenses are limited to 500 MB of daily indexing volume and do not allow distributed searching or clustering. To enable clustering, a license with a higher volume limit and distributed features is required. Replicated data is data that is copied from one peer node to another for the purpose of high availability and load balancing. Replicated data does not count against licensing, because it is not new data that is ingested by Splunk. Only the original data that is indexed by the peer nodes counts against licensing. Each cluster member does not require its own clustering license, because clustering licenses are shared among the cluster members. Cluster members must share the same license pool and license master, because the license master is responsible for distributing licenses to the cluster members and enforcing the license limits

NEW QUESTION # 160

What is the minimum reference server specification for a Splunk indexer?

- A. 24 CPU cores, 16GB RAM, 1200 IOPS
- B. 28 CPU cores, 32GB RAM, 1200 IOPS
- C. 12 CPU cores, 12GB RAM, 800 IOPS
- D. 16 CPU cores, 16GB RAM, 800 IOPS

Answer: C

Explanation:

The minimum reference server specification for a Splunk indexer is 12 CPU cores, 12GB RAM, and 800 IOPS. This specification is based on the assumption that the indexer will handle an average indexing volume of 100GB per day, with a peak of 300GB per day, and a typical search load of 1 concurrent search per 1GB of indexing volume. The other specifications are either higher or lower than the minimum requirement. For more information, see [Reference hardware] in the Splunk documentation.

NEW QUESTION # 161

.....

To do this you just need to pass the Splunk Enterprise Certified Architect (SPLK-2002) exam which is quite challenging and not easy to pass. However, proper planning, firm commitment, and complete real Splunk SPLK-2002 Exam QUESTIONS preparation can enable you to crack the final SPLK-2002 exam easily. For the quick and complete SPLK-2002 Exam Preparation the SPLK-2002 exam practice test questions are the ideal and recommended study material. With the "PassSureExam" exam questions you will get everything that you need to pass the final Splunk Enterprise Certified Architect (SPLK-2002) exam easily.
