

Valid Associate-Cloud-Engineer Exam Notes - Reliable Associate-Cloud-Engineer Braindumps Ebook

2026 Latest Exam4Free Associate-Cloud-Engineer PDF Dumps and Associate-Cloud-Engineer Exam Engine Free Share: <https://drive.google.com/open?id=1UMysdBm-BgnSa4eSN-Wn1nCXyhQBskHP>

The pass rate is 98% for Associate-Cloud-Engineer training materials, and our exam materials have gained popularity in the international for its high pass rate. If you choose us, we can ensure that you can pass your exam just one time. In addition, Associate-Cloud-Engineer exam dumps are high-quality, and you can use it with ease. You can obtain Associate-Cloud-Engineer exam materials within ten minutes, and if you don't receive, you can email to us, and we will solve this problem for you immediately. You can enjoy the free update for 365 days after purchasing, and the update version for Associate-Cloud-Engineer Exam Braindumps will be sent to you automatically, you just need to exam your email and change your practicing ways according to the new changes.

To earn the Google Associate-Cloud-Engineer Certification, candidates must pass a 2-hour online exam that consists of multiple-choice and multiple-select questions. Associate-Cloud-Engineer exam covers a range of topics, including cloud computing, networking, security, storage, and database management. Candidates must also demonstrate an understanding of Google Cloud Platform's key components, such as Compute Engine, Kubernetes Engine, App Engine, and Cloud Storage. With this certification, individuals can showcase their expertise in Google Cloud Platform and stand out among other cloud professionals in the industry.

Ensuring Operation Success of a Cloud Solution

- Manage database and storage solutions: this area requires your competence in setting object lifecycle management policies for Cloud Storage buckets; moving different objects between Cloud Storage buckets; estimating costs for BigQuery; executing queries for the retrieval of data from data instances. It also requires your capability to backup and restores data instances; review a job status in BigQuery, Cloud Dataflow, or Cloud Dataproc; work with management interfaces;
- Manage Google Kubernetes Engine resources: this requires one's competence in viewing on-going running cluster inventory;

browsing container image depository and viewing the details of container images; working with pods, node pools, services, stateful applications, and management interfaces;

- Manage network resources: this part requires the capability to add subnets to existing VPCs; expand subnets to include more IP addresses; reserve static internal or external IP address; work with management interfaces;
- Manage Compute Engine resources: the test takers should demonstrate their capability to manage single VM instances; RDP/SSH to instance; attach GPU to new instances and install CUDA libraries; view on-going running virtual machine inventory; work with snapshots, images, management interfaces, and instance groups;
- Monitor and log: this subject includes the examinees' ability to create Stackdriver custom metrics and Stackdriver alerts according to resource metrics; use Cloud diagnostics to analyze application issues; check and filter logs within Stackdriver; configure log sinks for the exportation of logs into external systems; view the status of Google Cloud Platform.

100% Pass Google - Latest Associate-Cloud-Engineer - Valid Google Associate Cloud Engineer Exam Exam Notes

So rest assured that with the Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) practice questions you will not only make the entire Associate-Cloud-Engineer exam dumps preparation process and enable you to perform well in the final Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) certification exam with good scores. To provide you with the updated Google Associate-Cloud-Engineer Exam Questions the Google offers three months updated Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) exam dumps download facility, Now you can download our updated Associate-Cloud-Engineer practice questions up to three months from the date of Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) exam purchase.

Google Associate Cloud Engineer Exam Sample Questions (Q41-Q46):

NEW QUESTION # 41

You are working with a user to set up an application in a new VPC behind a firewall. The user is concerned about data egress. You want to configure the fewest open egress ports. What should you do?

- A. Set up a high-priority (1000) rule that pairs both ingress and egress ports.
- B. Set up a high-priority (1000) rule to allow the appropriate ports.
- C. Set up a low-priority (65534) rule that blocks all egress and a high-priority rule (1000) that allows only the appropriate ports.
- D. Set up a high-priority (1000) rule that blocks all egress and a low-priority (65534) rule that allows only the appropriate ports.

Answer: C

Explanation:

Implied rules Every VPC network has two implied firewall rules. These rules exist, but are not shown in the Cloud Console: Implied allow egress rule. An egress rule whose action is allow, destination is 0.0.0.0/0, and priority is the lowest possible (65535) lets any instance send traffic to any destination, except for traffic blocked by Google Cloud. A higher priority firewall rule may restrict outbound access. Internet access is allowed if no other firewall rules deny outbound traffic and if the instance has an external IP address or uses a Cloud NAT instance. For more information, see Internet access requirements. Implied deny ingress rule. An ingress rule whose action is deny, source is 0.0.0.0/0, and priority is the lowest possible (65535) protects all instances by blocking incoming connections to them. A higher priority rule might allow incoming access. The default network includes some additional rules that override this one, allowing certain types of incoming connections.

https://cloud.google.com/vpc/docs/firewalls#default_firewall_rules

NEW QUESTION # 42

You are monitoring an application and receive user feedback that a specific error is spiking. You notice that the error is caused by a Service Account having insufficient permissions. You are able to solve the problem but want to be notified if the problem recurs. What should you do?

- A. Create a sink to BigQuery to export all the logs.
Create a Data Studio dashboard on the exported logs.
- B. In the Log Viewer, filter the logs on severity 'Error' and the name of the Service Account.

- C. Create a custom log-based metrics for the specific error to be used in an Alerting Policy.
- D. Grant Project Owner access to the Service Account.

Answer: B

Explanation:

<https://cloud.google.com/logging/docs/view/advanced-queries8E6BA412E7DB6A14A62CC68E5EB6DAE3>

NEW QUESTION # 43

You have an object in a Cloud Storage bucket that you want to share with an external company.

The object contains sensitive data. You want access to the content to be removed after four hours. The external company does not have a Google account to which you can grant specific user-based access privileges. You want to use the most secure method that requires the fewest steps. What should you do?

- A. Configure the storage bucket as a static website and furnish the object's URL to the company. Delete the object from the storage bucket after four hours.
- B. Set object access to 'public' and use object lifecycle management to remove the object after four hours.
- C. Create a new Cloud Storage bucket specifically for the external company to access. Copy the object to that bucket. Delete the bucket after four hours have passed.
- D. Create a signed URL with a four-hour expiration and share the URL with the company.

Answer: D

Explanation:

Signed URLs are used to give time-limited resource access to anyone in possession of the URL, regardless of whether they have a Google account.

<https://cloud.google.com/storage/docs/access-control/signed-urls>

NEW QUESTION # 44

Your team uses a third-party monitoring solution. They've asked you to deploy it to the nodes in your Kubernetes Engine Cluster. What's the best way to do that?

- A. Deploy the monitoring pod as a DaemonSet.
- B. Deploy the monitoring pod as a Deployment.
- C. Connect to each node via SSH and install the monitoring solution.
- D. Use Deployment Manager to deploy the monitoring solution.

Answer: A

NEW QUESTION # 45

Your Dataproc cluster runs in a single Virtual Private Cloud (VPC) network in a single subnet with range 172.16.20.128/25. There are no private IP addresses available in the VPC network. You want to add new VMs to communicate with your cluster using the minimum number of steps.

What should you do?

- A. Create a new VPC network for the VMs. Enable VPC Peering between the VMs' VPC network and the Dataproc cluster VPC network.
- B. Create a new VPC network for the VMs with a subnet of 172.32.0.0/16. Enable VPC network Peering between the Dataproc VPC network and the VMs VPC network. Configure a custom Route exchange.
- C. Modify the existing subnet range to 172.16.20.0/24.
- D. Create a new Secondary IP Range in the VPC and configure the VMs to use that range.

Answer: C

Explanation:

gcloud compute networks subnets expand-ip-range

NAME

gcloud compute networks subnets expand-ip-range - expand the IP range of a Compute Engine subnetwork

NEW QUESTION # 46

.....

In today's world, the Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) certification exam has become increasingly popular, providing professionals with the opportunity to upskill and stay competitive in the tech industry. At Exam4Free, we understand the importance of obtaining the Google Associate-Cloud-Engineer Certification in the Google sector, where technological advancements constantly evolving.
