## CTAL-TM-001測試引擎 & CTAL-TM-001最新考古題

沒有人除外，我們PDFExamDumps保證你100%的比例，今天你選擇PDFExamDumps，選擇你要開始的訓練，並通過你的下一次的考題，你將得到最好的資源與市場的相關性和可靠性保證。PDFExamDumps ISTQB的CTAL-TM-001考題和答案反映的問題問CTAL-TM-001考試。

### ISTQB CTAL-TM-001 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none"><li>Managing the Test Activities: This section of the exam measures the skills of a Test Manager and covers the end-to-end coordination of testing work. Candidates must demonstrate how to plan testing—defining objectives, scope, resources, schedule, and risk treatments—then how to monitor progress against those plans, control deviations through corrective actions, and conclude testing with completion reports, archival of testware, and lessons-learned sessions. The syllabus also explores tailoring test activities to project context, applying risk-based testing to focus effort where it matters most, shaping a coherent project test strategy, leading process-improvement initiatives, and selecting and managing test tools throughout their lifecycle.</li></ul>

主題 2	<ul style="list-style-type: none"> <li>Managing the Product: This section of the exam measures the skills of a Test Analyst and focuses on the artefacts under test and the metrics that describe them. Examinees show how to define and collect test metrics to monitor quality and progress, estimate effort and resources for different test scopes, and organize defect management workflows that fit sequential, iterative, or hybrid lifecycles. The aim is to ensure test outcomes align with objectives and inform stakeholders through clear reporting, while using estimation techniques and defect data to guide ongoing test and process improvements.</li> </ul>
主題 3	<ul style="list-style-type: none"> <li>Managing the Team: This section of the exam measures the skills of a Test Lead and addresses the human side of test management. Candidates must demonstrate how to identify the skills required for each project, assess and develop team competence, and apply motivating leadership practices. The syllabus also covers stakeholder relationship management, understanding interests and influence, articulating the business case for testing, and balancing cost of quality considerations to ensure testing is properly resourced, communicated, and valued within the wider project.</li> </ul>

## 最新的 ISTQB Test Manager Advanced CTAL-TM-001 免費考試真題 (Q109-Q114):

### 問題 #109

Test results are reported as "Requirements tested, passed, and failed".

What test strategy are you using? [1]

- A. Reactive
- **B. Analytical**
- C. Model-based
- D. Exploratory

答案: B

#### 解題說明:

An analytical test strategy is a test strategy that is based on the analysis of the factors that affect the quality of the software under test, such as the requirements, the risks, the complexity, or the criticality<sup>1</sup>. An analytical test strategy uses these factors to define the test objectives, scope, approach, and techniques, as well as to prioritize and allocate the test resources<sup>2</sup>. Reporting the test results as "Requirements tested, passed, and failed" implies that the testing is driven by the requirements, which are the specifications of the desired features and functions of the software under test. Testing based on the requirements is an example of an analytical test strategy, as it uses the requirements as the main factor to guide the testing activities. Therefore, option C is the correct answer. Option A is incorrect because a model-based test strategy is a test strategy that uses models to represent the desired behavior and structure of the software under test, and to derive test cases, test data, test procedures, and test oracles. A model-based test strategy does not necessarily report the test results as "Requirements tested, passed, and failed", as it may use other types of models, such as state diagrams, data flow diagrams, or decision tables, to generate and execute the tests. Option B is incorrect because an exploratory test strategy is a test strategy that uses the tester's knowledge, skills, and creativity to design and execute tests dynamically, without predefined test cases or test procedures. An exploratory test strategy does not report the test results as "Requirements tested, passed, and failed", as it does not follow a formal or structured testing process, but rather relies on the tester's intuition, experience, and feedback. Option D is incorrect because a reactive test strategy is a test strategy that uses the actual behavior and results of the software under test to design and execute tests, without prior knowledge or documentation of the software. A reactive test strategy does not report the test results as "Requirements tested, passed, and failed", as it does not have any requirements or specifications to compare the software against, but rather uses the software itself as the test basis. ### 問題 #110

The development manager is managing the review of the responses received from bidders, and has asked the in-house test manager to provide a review checklist for the test management aspects of the responses. Which of the following checkpoints would be appropriate? 2 credits

- A. The bidder's test policy should enforce that incident management fully conforms to IEEE 1044.
- B. The bidder's test plan shows that the application will be delivered for acceptance in six months time.
- C. The bidder's project test plan depicts a phased implementation with later delivery dates to be confirmed and states that test deliverables will be developed using IEEE 829 as a guide.
- D. The bidder's project strategy shows that the data content of all the test environments conforms to EU standards.

答案： C

解題說明：

#### 問題 #111

Refer to SCENARIO 2 - You are the test manager for Project 3 and have performed a skills assessment of your Safe as Houses' test team. You must now decide what training or skills development is required.

The matrix shows the skill level (5 being highest, 1 lowest) for each team member. Which two of the above skills need the closest attention for potential training or development on this project?

SELECT ONE OPTION

- A. Knowledge of Light Imagery software and Test control.
- B. Performance testing & Test planning for incremental life-cycles.
- C. Integration testing and Knowledge of Light Imagery software.
- D. Acceptance testing and Knowledge of Light Imagery software.

答案： A

#### 問題 #112

You tend to be conservative in your project estimations because you know how many things can go wrong and extend the schedule. Your manager is not happy with your estimates and thinks you are being too negative with your numbers and not trying hard enough. Which estimation method should you use to provide your manager with a positive number while still also providing the number you think is more realistic?

- A. Wideband Delphi
- B. Extrapolation
- C. Three-point estimation
- D. Planning poker

答案： C

解題說明：

\* Context Analysis:

\* The manager perceives conservative estimates as overly negative. The goal is to balance optimism with realism to satisfy both the team and the manager.

\* Three-point estimation provides a range of estimates: optimistic, pessimistic, and most likely, addressing the need for a positive yet realistic projection.

\* Evaluation of Options:

\* A. Wideband Delphi:

\* Involves group-based estimation using consensus techniques. While reliable, it does not explicitly offer optimistic vs. realistic estimates.

\* B. Planning Poker:

\* Often used in Agile projects, this technique involves relative estimation but does not inherently provide optimistic and pessimistic figures.

\* C. Three-point estimation:

\* Correct. Combines optimistic, pessimistic, and realistic estimates to calculate a weighted average. This allows presentation of both realistic and "positive" numbers to the manager.

\* D. Extrapolation:

\* Based on past data trends but does not offer a range of estimates or a way to address manager concerns directly.

\* Syllabus Alignment: The ISTQB syllabus mentions estimation methods like three-point estimation as effective techniques for providing balanced and transparent project timelines (TM-2.2.1).

#### 問題 #113

Which of the following organizational structures would be considered unorthodox? [1]

- A. After developers are done unit testing, business analysts alpha test the system before handing over to a separate testing team for system testing
- B. DBAs confirm the referential integrity of the database and developers complete their unit testing before handing over to external organization for system testing
- C. Developers within the same team unit test each others' code prior to handing over to a separate testing team for system testing
- D. Developers and testers are integrated within the same project team, each role focusing on a different level of testing

答案：A

#### 解題說明：

The unorthodox structure mentioned in option C involves business analysts performing alpha testing.

Typically, alpha testing is conducted by internal staff or a team close to the development environment, not specifically by business analysts. This step is unusual as business analysts are generally responsible for requirements analysis and ensuring that the developed system meets business needs, rather than conducting alpha testing, which is more focused on identifying bugs and issues from a user's perspective.
