Nokia 4A0-D01 考試大綱：

主題	簡介
主題 1	SR Linux Configuration and Routing: This section of the exam measures skills of a Network Automation Specialist and focuses on configuring and managing SR Linux systems. It examines the YANG-driven CLI, JSON output, environment variables, and static and dynamic routing. Learners also explore BGP, ECMP, IP-VRF, MAC-VRF, and the use of VXLAN with EVPN to implement both Layer 2 and Layer 3 overlays, including symmetric and asymmetric models.
主題 2	This section of the exam measures skills of a Network Automation Specialist and introduces the principles of Event Driven Automation in SR Linux environments. It covers integration with Kubernetes and explores core use cases such as intent-based automation for fabrics and services, as well as enhanced network observability.
主題 3	Module 5 – EDA (Event Driven Automation) Introduction

患難可以試驗一個人的品格，非常的境遇方才可以顯出非常的氣節；風平浪靜的海面，所有的船隻都可以並驅競勝。命運的鐵拳擊中要害的時候，只有大勇大智的人才能夠處之泰然。你是大智大勇的人嗎？如果你的IT認證考試沒有做好考前準備，你還處之泰然嗎？當然，因為你有 NewDumps Nokia的4A0-D01考試培訓資料在手上，任何考試困難都不會將你打到。

最新的 Nokia Certified Data Center Fabric Professional 4A0-D01 免費考試真題 (Q10-Q15):

問題 #10

Which of the following statements about using BFD with BGP is FALSE?

- A. The BFD endpoints agree on the send/receive rate of control packets.
- **B. Using BFD can speed up the BGP advertisement interval.**
- C. BGP is notified if several BFD control packets are missed.
- D. It can help rapidly detect link failures.

答案: B

解題說明:

BFD helps detect link failures rapidly and notifies BGP to trigger route updates quickly, but it does not speed up the BGP advertisement interval itself. BGP advertisement intervals are controlled by BGP timers, not by BFD.

問題 #11

Which of the following statements about configuration checkpoints in Nokia SR Linux is FALSE?

- **A. Checkpoint 0 is always the oldest checkpoint.**
- B. The current running configuration can be saved as a JSON-formatted checkpoint file.
- C. The operator can revert to any existing checkpoint.
- D. The operator can generate a new checkpoint when committing configuration changes.

答案: A

解題說明:

In Nokia SR Linux, checkpoint numbering is dynamic. The system assigns the lowest available number to the most recent checkpoint, not necessarily "0." When the number of saved checkpoints exceeds the configured maximum, the oldest checkpoint is removed, and the remaining checkpoints are renumbered accordingly. Therefore, checkpoint "0" is not always the oldest checkpoint.

問題 #12

Based on the exhibit output, what CLI command can be used to display the contents of "bgp-log" in Nokia's SR Linux?

```
--( + candidate shared default )--[ system logging ]--
A:dc-leaf-1# info
:
:
file bgp-log {
    format "%TIMEGENERATED:::date-utc3339% %HOSTNAME% %syslogfacility-text%|%syslogseverity-text:1:4:uppercase%
%SYSLOGTAG%MSG:::sp-if-no-1st-sp%MSG:::drop-last-1f%\n"
    subsystem bgp {
    }
    subsystem netinst {
    }
}
```

- A. info system logging buffer bgp-log
- **B. show system logging file bgp-log**
- C. show system logging buffer bgp-log
- D. info system logging file bgp-log

答案: B

解題說明:

The "bgp-log" is defined as a log file in the configuration, so the correct command to display its contents is show system logging file bgp-log.

問題 #13

A static route is configured in two steps in Nokia's SR Linux. Which of the following items CANNOT be configured in the static-routes container?

- A. IPv4 destination prefix

- B. blackhole
- C. Next-hop group
- D. Preference value

答案： B

解題說明：

The static-routes container in Nokia SR Linux does not support configuring a blackhole route directly; it is used to configure destination prefixes, preference values, and next-hop groups for static routing.

問題 #14

Which of the following statements about Nokia's Fabric Services System is FALSE?

- A. Digital sandbox provides notification of performance issues in the data center fabric.
- B. Data center fabric configuration is represented as the fabric intent in a declarative YAML format.
- C. Cloud-native design enables easy integration with the customer's environment.
- D. Telemetry data is provided in a context that is relevant to the fabric intent.

答案： A

解題說明：

The Digital Sandbox in Nokia's Fabric Services System is primarily used for simulation and validation of fabric intent, not for providing notifications of performance issues.

問題 #15
