Google ChromeOS-Administrator study guide

Our evaluation system for ChromeOS-Administrator test material is smart and very powerful. First of all, our researchers have made great efforts to ensure that the data scoring system of our ChromeOS-Administrator test questions can stand the test of practicality. Once you have completed your study tasks and submitted your training results, the evaluation system will begin to quickly and accurately perform statistical assessments of your marks on the ChromeOS-Administrator exam torrent. In a matter of seconds, you will receive an assessment report based on each question you have practiced on our ChromeOS-Administrator test material. The final result will show you the correct and wrong answers so that you can understand your learning ability so that you can arrange the learning tasks properly and focus on the targeted learning tasks with ChromeOS-Administrator test questions. So you can understand the wrong places and deepen the impression of them to avoid making the same mistake again.

Google Professional ChromeOS Administrator Exam Sample Questions (Q46-Q51):

NEW QUESTION # 46

Which management feature makes ChromeOS devices a popular choice for IT administrators in educational organizations and enterprises?

Which management feature makes ChromeOS devices enterprises?

- A. Centralized management through Admin console
- B. Inability to remotely control and monitor devices
- C. Secure management through on prem infrastructure

- D. Remote BIOS controls and firmware update

Answer: A

Explanation:

The ChromeOS Admin console provides centralized management, making it a popular choice for IT administrators. It allows them to manage policies, apps, extensions, and device settings from a single interface, streamlining administration and ensuring consistency across devices.

Option A is incorrect because ChromeOS management is primarily cloud-based, not on-premises.

Option B is incorrect because while BIOS control might be available, it's not the primary management feature.

Option D is incorrect because ChromeOS devices can be remotely controlled and monitored through the Admin console.

NEW QUESTION # 47

You are a ChromeOS Administrator of a school district. While working with a teacher in one of the schools, they mention they are having issues downloading files on their ChromeOS device. What are some ways you can help troubleshoot with the least amount of disruption to the user?

- A. Run Diagnostics from the ChromeOS device to troubleshoot
- **B. Check how much storage is being used on the device then delete or move files that aren't needed anymore**
- C. Check for system updates. If any updates are available, install them.
- D. Reset the user's ChromeOS device to its original factory settings.

Answer: B

Explanation:

When a teacher is having issues downloading files on their ChromeOS device, it's important to troubleshoot with minimal disruption. Here are steps to address the issue:

* **Check Storage:** Start by checking the available storage on the device. If the storage is full or nearly full, it could prevent new files from being downloaded.

* **Manage Files:** Guide the teacher to delete or move files that are no longer needed. This can be done through the Files app on the ChromeOS device.

* **Clear Cache:** If storage isn't the issue, clearing the browser cache can sometimes resolve download problems.

* **Check Network:** Ensure that the device has a stable internet connection, as an unstable connection can

* interrupt downloads.

References: The troubleshooting steps are based on common practices for resolving download issues on ChromeOS devices and Google's support documentation on fixing file download errors¹. These steps are designed to resolve issues without causing significant disruption to the user's experience.

* **Insufficient Storage:** A common reason for download failures on ChromeOS devices is insufficient storage space. Checking the available storage is a simple first step:

* Click on the system tray (bottom right corner) and select the Settings gear icon.

* In the Settings menu, navigate to the "Device" section and select "Storage Management."

* Review the storage usage. If it's nearly full, identify large files or unused apps that can be removed.

* Guide the teacher on how to delete files or move them to Google Drive.

* **System Updates:** Outdated software can sometimes lead to bugs or glitches. Ensuring the ChromeOS device is up-to-date is important:

* In the Settings menu, navigate to the "About ChromeOS" section.

* Click on "Check for updates." If any updates are found, install them.

* If updates are pending, ask the teacher to restart the device after the installation.

* **Additional Troubleshooting (If necessary):**

* **Check Network Connectivity:** Ensure the device is connected to a stable Wi-Fi network. Have the teacher try accessing a different website to verify internet access.

* **Clear Browser Cache:** In the Chrome browser, open the Settings menu, navigate to "Privacy and security," and select "Clear browsing data." Clear the cache for the past hour or day.

Why Other Options Are Less Ideal:

* **A. Run Diagnostics:** While diagnostics can be helpful, they are a more time-consuming step and might not be necessary if the issue is simply related to storage or updates.

* **C. Reset the Device:** This is a drastic measure that should only be considered if other troubleshooting steps fail. It involves wiping the user's data and settings, which is disruptive.

NEW QUESTION # 48

Your team has members that work remotely. Your CTO would like to verify that your fleet of ChromeOS devices remains managed by corporate policy even after a device wipe. What would you configure to complete this objective?

- A. Set the setting "Powerwash" to "Do not allow powerwash to be triggered"
- B. Edit the setting "Verified Access" to "Require verified mode for boot for verified access"
- C. Create strict password rules
- D. Set up the Admin console to force the device to automatically re-enroll after wiping

Answer: D

Explanation:

To ensure that ChromeOS devices remain managed after a wipe, you need to enable forced re-enrollment.

This setting automatically re-enrolls the device into the management domain after it has been wiped (Powerwashed). This feature is crucial for organizations that manage devices remotely, as it prevents unauthorized users from removing management settings.

Verified Answer from Official Source:

The correct answer is verified from the Google ChromeOS Device Management Best Practices Guide, which recommends enabling forced re-enrollment to maintain device management continuity.

"To ensure devices remain managed after wiping, enable the 'Forced Re-enrollment' policy in the Admin console. This setting ensures automatic re-enrollment upon startup." Forced re-enrollment prevents the loss of device management, which is essential for maintaining security and policy compliance, especially in remote or dispersed environments.

Objectives:

- * Enforce device management after Powerwash.
- * Maintain compliance in remote work environments.

NEW QUESTION # 49

Your administration team is about to deploy a fleet of ChromeOS devices. Your users have their own peripherals, and you would like them to use what they have if possible. You also would like to let your users know what peripherals work and what peripherals do not. What should you do for your users?

- A. Tell your users to try what they have and to start an IT support ticket if something isn't working right
- B. Tell your users that every peripheral works with ChromeOS
- C. Create Change Management documentation that provides them with information on how to check their current peripherals and instructions on how to get new equipment
- D. Send them all new peripherals and have your users send in their old equipment even if the old equipment works

Answer: C

Explanation:

The best way to handle this situation is to create Change Management documentation that clearly outlines how users can check the compatibility of their peripherals with ChromeOS. This documentation should also include instructions on how to obtain new peripherals if needed. This proactive approach reduces confusion and ensures that users know how to verify their existing equipment.

Verified Answer from Official Source:

The correct answer is verified from the Google Workspace Deployment Guide, which emphasizes proactive user communication through change management documentation during device rollouts.

"To ensure smooth transitions, provide users with detailed change management documentation, including steps to verify peripheral compatibility and obtain replacements if necessary." Creating clear documentation helps reduce support requests and empowers users to verify their own equipment, streamlining the deployment process.

Objectives:

- * Facilitate smooth ChromeOS device rollout.
- * Enhance user self-service with comprehensive guidance.

NEW QUESTION # 50

You need to set a policy that prevents the device from shutting down while idling on the sign-in screen. Where should you navigate to?

- A. Device Settings > Allow shutdown
- B. User Settings > User Experience
- **C. Device Settings > Power management**
- D. User Settings > Idle settings

Answer: C

Explanation:

To prevent a ChromeOS device from shutting down while idling on the sign-in screen, you need to adjust the power management settings. This can be done through the following steps:

- * Go to the Google Admin console.
- * Navigate to Device Management > Chrome Management > Device Settings.
- * Find the Power management section and locate the setting that controls idle behavior on the sign-in screen.
- * Adjust the setting to prevent shutdown during idle periods.

Option A is incorrect because idle settings primarily control screen dimming and sleep behavior.

Option B is incorrect because user experience settings generally focus on visual and interaction aspects, not power management.

Option C is incorrect because there isn't a specific "Allow shutdown" setting in ChromeOS device settings.

NEW QUESTION # 51

.....

The ValidDumps wants to win the trust of Professional ChromeOS Administrator Exam (ChromeOS-Administrator) exam candidates at any cost. To fulfill this objective the ValidDumps is offering top-rated and real ChromeOS-Administrator exam practice test in three different formats. These Google ChromeOS-Administrator exam question formats are PDF dumps, web-based practice test software, and web-based practice test software. All these three ValidDumps exam question formats contain the real, updated, and error-free Google ChromeOS-Administrator Exam Practice test.
