Our MCCQE Part 1 Exam torrent prep can apply to any learner whether students or working staff, novices or practitioners with years of experience. To simplify complex concepts and add examples, simulations, and diagrams to explain anything that might be difficult to understand, studies can easily navigate learning and become the master of learning. Our MCCQE exam questions are committed to instill more important information with fewer questions and answers, so you can learn easily and efficiently in this process. In the meantime, our service allows users to use more convenient and more in line with the user's operating habits of MCCQE Test Guide, so you will not feel tired and enjoy your study. With timing and practice exam features, studies can experience the atmosphere of the exam and so you can prepare for the next exam better.

You can take the online Medical Council of Canada MCCQE practice exam multiple times. At the end of each attempt, you will get your progress report. By analyzing this report you can eliminate and overcome your mistakes. Medical Council of Canada MCCQE real dumps increase your chances of passing the MCCQE certification exam. A huge number of professionals got successful by using ITExamDownload MCCQE practice test material. In case you don't pass the MCCQE Part 1 Exam, MCCQE test after using Medical Council of Canada MCCQE pdf questions and practice tests, you can claim your refund. You can download a free demo of any MCCQE exam dumps format and check the features before buying. Start Medical Council of Canada MCCQE test preparation today and obtain the highest marks in the actual MCCQE exam

## Reliable MCCQE Cram Materials - MCCQE Actual Exam

We have handled professional MCCQE practice materials for over ten years. Our experts have many years' experience in this particular line of business, together with meticulous and professional attitude towards jobs. Their abilities are unquestionable, besides, MCCQE Exam Questions are priced reasonably with three kinds: the PDF, Software and APP online. Though the content is the same, but their displays are totally different and functional.

### Medical Council of Canada MCCQE Part 1 Exam Sample Questions (Q135-Q140):

#### NEW QUESTION # 135

A 55-year-old woman presents with a 6-month history of poor memory and impaired concentration. She has bipolar I disorder that has been treated with lithium carbonate for 4 years. She has gained a lot of weight since starting lithium. Physical examination findings are otherwise normal. She is concerned about her memory issues, but there are no other perception, mood, or cognition abnormalities. Which one of the following tests is most likely to have abnormal findings?

- A. Creatinine clearance
- **B. Serum thyrotropin (thyroid-stimulating hormone) level**
- C. Parathyroid hormone
- D. Serum sodium level
- E. Liver function tests

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation:

Lithium commonly causes hypothyroidism, which can lead to fatigue, cognitive slowing, weight gain, and memory impairment.

Thyroid-stimulating hormone (TSH) levels are often elevated in such cases.

Toronto Notes 2023 - Psychiatry / Endocrinology:

"Lithium is associated with hypothyroidism and renal impairment. Monitor TSH regularly in patients on lithium therapy." MCCQE1

Objectives (Psychiatry > 71-5: Mood Stabilizers):

"Candidates must recognize the endocrine side effects of lithium, including hypothyroidism and the importance of TSH monitoring."

Creatinine clearance (C) may also be affected but is less directly associated with memory issues. Liver function (A), sodium (D), and PTH (E) are not typically the first abnormal values in this presentation.

#### NEW QUESTION # 136

A 38-year-old woman, gravida 3, para 2, aborta 0, presents to the labour and delivery unit for induction of labour. Her pregnancy is at 42 weeks' gestation and has been uncomplicated to date. Which one of the following is the most appropriate information to provide to the patient?

- A. Prostaglandin induction of labour is contraindicated.
- **B. Continuous electronic fetal monitoring in labour is recommended.**
- C. Cesarean delivery is preferred.

**Answer: B**

Explanation:

This patient has a post-term pregnancy (#42 weeks' gestation). Post-term pregnancies are associated with increased risks including placental insufficiency, oligohydramnios, meconium aspiration, fetal macrosomia, and stillbirth. During induction and labour in post-term pregnancies, continuous electronic fetal monitoring (EFM) is recommended to assess fetal well-being and detect signs of fetal distress early.

Prostaglandin induction is not contraindicated; it is commonly used for cervical ripening when indicated, provided there are no standard contraindications (e.g., prior classical cesarean). Cesarean delivery is not routinely preferred solely due to post-term status; mode of delivery should be based on obstetric indications.

According to MCCQE objectives, candidates must recognize the risks associated with post-term pregnancy and understand appropriate intrapartum management, including fetal surveillance. Continuous EFM is recommended in higher-risk situations such as post-term gestation to optimize perinatal outcomes while still aiming for safe vaginal delivery when no contraindications exist.

### NEW QUESTION # 137

A 42-year-old woman, gravida 2, para 2, aborta 0, comes to the office for the first time. She reports a 6-month history of thirst, urinary frequency, and recurrent vaginitis. Aside from a BMI of 28, her physical examination findings are unremarkable. She takes no medications. Which one of the following would support the most likely diagnosis?

- A. Recent antibiotic use.
- B. Family history of hypertension.
- C. High-risk sexual behaviours.
- D. Dry eyes.
- E. Delivery of a macrosomic newborn.

**Answer: E**

Explanation:

This patient's symptoms of polyuria, polydipsia, and recurrent vaginitis are classic for type 2 diabetes mellitus (T2DM). Recurrent vaginal candidiasis occurs due to glycosuria promoting yeast overgrowth. MCCQE objectives emphasize identifying risk factors and historical features supporting diabetes. A prior delivery of a macrosomic infant (> 4000-4500 g) is strongly associated with gestational diabetes mellitus (GDM), which significantly increases the future risk of developing T2DM. Therefore, a history of macrosomia supports undiagnosed or previous gestational hyperglycemia and increases suspicion for current diabetes.

High-risk sexual behaviors relate to sexually transmitted infections, not diabetes. Family history of hypertension is a cardiovascular risk factor but does not specifically support diabetes. Recent antibiotic use may predispose to candidiasis but would not explain polyuria and polydipsia. Dry eyes are more suggestive of autoimmune conditions (e.g., Sjogren syndrome).

Thus, prior delivery of a macrosomic newborn strengthens the likelihood that her current symptoms are due to type 2 diabetes mellitus.

### NEW QUESTION # 138

A 56-year-old woman comes to your office because she has not been herself since her husband died in a car crash 6 weeks ago. She has no prior psychiatric history. Her son is concerned because she cries frequently, has a poor appetite, rarely leaves home and is distraught. Her sadness fluctuates and increases when she thinks of her husband. She often thinks about death, and she wishes she could join her deceased husband. Which one of the following is the best next step?

- A. Offer reassurance.
- B. Admit to day hospital.
- C. Arrange for family systems therapy.
- D. Refer to a social worker.

**Answer: D**

Explanation:

Her presentation at 6 weeks after a spouse's death is most consistent with acute/normal grief: intense sadness, crying, social withdrawal, reduced appetite, and waves of distress triggered by reminders of the deceased.

MCCQE objectives stress distinguishing grief from major depressive disorder by the fluctuating nature of symptoms, grief "pangs," and the link to thoughts of the deceased. Although she expresses wishing to "join" her husband, this can occur in normal bereavement; the key clinical duty is to assess safety (suicidal intent, plan, means, past attempts, protective factors). In the absence of imminent risk or psychosis, inpatient/day-hospital admission is not the default. "Reassurance" alone is insufficient because she is significantly impaired and needs structured support. The best next step is referral for bereavement-focused support (often via social work), which can provide grief counseling, coping strategies, mobilization of supports, and monitoring, and can facilitate escalation if complicated grief or major depression emerges. Family systems therapy may help later, but immediate practical and grief-specific support plus safety assessment is the priority.

### NEW QUESTION # 139

On screening for dyslipidemia, a 45-year-old man is found to have a low high-density lipoprotein (HDL) cholesterol level. Which one of the following recommendations is the most appropriate?

- A. Alcohol cessation.
- B. Low-salt diet.
- C. Elimination of caffeine.
- D. Vigorous exercise program.
- E. Garlic supplementation.

**Answer: D**

Explanation:

Low HDL is best managed with lifestyle changes such as increased aerobic physical activity, smoking cessation, and weight loss. Vigorous exercise has the strongest evidence for raising HDL levels.

Toronto Notes 2023 - Cardiology, Dyslipidemia:

"Increasing physical activity is among the most effective ways to raise HDL cholesterol. There is no consistent benefit to supplements such as garlic, nor does reducing salt or caffeine meaningfully raise HDL." MCCQE1 Objectives - Population Health >

Cardiovascular Risk Management:

"Candidates should recommend evidence-based lifestyle interventions such as exercise to improve lipid profiles, particularly to increase HDL." Alcohol cessation (C) is generally beneficial for overall health but may actually lower HDL slightly. Garlic (D) and caffeine (E) are not evidence-based interventions for dyslipidemia.

## NEW QUESTION # 140

.....

Purchasing a product may be a cautious thing for all of us, because we not only need to consider the performance of the product but also need to think about the things after purchasing. Our product will provide free demo for trying, and after you have bought the product of the MCCQE exam, we will send you the product by email in ten minutes after we have received the payment. After you bought the practice materials for the MCCQE Exam, if you have any question in the process of using, you can ask the service staff for help by email. Free update for having bought product is also available.
