Our Mule-Dev-202 valid study guide is edited by out IT professional experts and focus on providing you with the most updated study material for all of you. You will pass your Mule-Dev-202 actual test in your first attempt. With the help of Salesforce Mule-Dev-202 Current Exam Content, you will be more confident and positive to face your coming test. After you get your Mule-Dev-202 certification, you will be getting close to your dream.

Just download the Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) PDF dumps file and start the Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) exam questions preparation right now. Whereas the other two Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) practice test software is concerned, both are the mock Salesforce Mule-Dev-202 Exam Dumps and help you to provide the real-time Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) exam environment for preparation.

>> Mule-Dev-202 Valid Practice Questions <<

How Can Salesforce Mule-Dev-202 Exam Questions Help You in Exam Preparation?

A good deal of researches has been made to figure out how to help different kinds of candidates to get Mule-Dev-202 certification. We revise and update the Mule-Dev-202 test torrent according to the changes of the syllabus and the latest developments in theory.

and practice. We base the Mule-Dev-202 Certification Training on the test of recent years and the industry trends through rigorous analysis. Therefore, for your convenience, more choices are provided for you, we are pleased to suggest you to choose our Mule-Dev-202 exam question for your exam.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q37-Q42):

NEW QUESTION # 37

A MuleSoft developer at AnyAirlines is tasked with creating a new API for an integration. According to best practices, what is the first step they need to perform?

- A. Install a standalone Mule runtime on their local machine.
- B. Create a new project in Anypoint Studio.
- C. Create a case in Salesforce.
- **D. Create a RAML definition in Design Center.**

Answer: D

Explanation:

RAML Definition Creation: The first step in creating a new API as per MuleSoft best practices is to create a RAML (RESTful API Modeling Language) definition in the Design Center. This step is critical as it outlines the API's structure, endpoints, methods, and data types, providing a clear blueprint for subsequent development.

Reference: MuleSoft API Design Best Practices

Project Creation in Anypoint Studio: Once the RAML definition is created, the next step would be to generate the API project in Anypoint Studio. This IDE allows developers to implement the API logic as defined in the RAML.

Reference: Getting Started with Anypoint Studio

Mule Runtime Installation: Installing Mule runtime is necessary for running and testing Mule applications locally. However, this step is secondary to defining the API's structure.

Reference: Mule Runtime Installation

Case Creation in Salesforce: Creating a case in Salesforce is not relevant to the API development process but may be necessary for support or project management purposes.

Reference: Salesforce Case Management

NEW QUESTION # 38

A Salesforce admin for AnyAirlines constructs a MuleSoft Composer flow that retrieves a record based on a unique ID using the Get Records action from a Salesforce connector. They will use the result to send a Slack message. How can they achieve this task?

- A. 1. Add a For Each loop after the Salesforce action step iterating over the collection of Salesforce records. 2. Use a Slack action step to construct the messages from the record being processed.
- B. 1. Add a Slack action step after the Salesforce action step. 2. Use the first record from the collection of Salesforce records to construct the message.
- C. 1. Add an If/Else Block after the Salesforce action step, which contains a branch checking if the Salesforce action step returned exactly one record. 2. In the branch, add a Slack action step and use the record to construct the message.
- **D. 1. Add a Slack action step after the Salesforce action step. 2. Use the record to construct the message.**

Answer: D

Explanation:

Salesforce Action Step: Start by adding a Salesforce action step that uses the Get Records action to retrieve the record based on a unique ID. This action retrieves the specific record needed.

Reference: MuleSoft Composer Salesforce Connector

Add Slack Action Step: After retrieving the record, add a Slack action step. This step will be used to send the message to Slack.

Reference: MuleSoft Composer Slack Connector

Use the Record: Use the retrieved record directly to construct the message in the Slack action step. This ensures the message contains the relevant information from the Salesforce record.

Reference: Building Messages in Composer

No Need for Collection Handling: Since the Get Records action retrieves a single record based on a unique ID, there is no need to handle collections or iterate through records.

Reference: Get Records Action

NEW QUESTION # 39

A Salesforce administrator asks for advice on how to build their Salesforce flow. They need to complete several DML actions as part of their Salesforce flow and are running into DML governor limits during testing.

Which two pieces of advice should be given to the Salesforce administrator to improve their flow? (Choose two.)

- A. Avoid putting DML statements inside of For Loop occurrences.
- B. Use the upsert action to reduce the amount of DML statements required during the flow runtime.
- C. Loop through a collection variable to save more records with a single DML statement.
- D. Use DML statements at the end of the flow wherever possible.

Answer: A,C

Explanation:

Avoid DML in For Loops: Placing DML (Data Manipulation Language) operations inside a loop can quickly exceed Salesforce governor limits, as each iteration performs a separate DML operation. It's best to collect records in a list and perform DML operations outside the loop.

Reference: Salesforce Governor Limits

Use Collection Variables: By looping through a collection variable and adding records to it, you can perform bulk DML operations, which are more efficient and less likely to hit governor limits.

Reference: Apex Collections and Bulk Processing

Use Upsert Action: Using the upsert action can reduce the number of DML statements by combining insert and update operations. However, this strategy depends on the specific flow requirements and data structure.

Reference: Salesforce Upsert Operation

DML Statements at the End: Consolidating DML operations to the end of the flow is advisable, but care should be taken to handle errors and exceptions appropriately.

Reference: Error Handling in Flows

NEW QUESTION # 40

A non-technical employee from AnyAirlines creates a hyperautomation solution. The solution needs to meet the following criteria:

The process needs to begin when a record is created in Salesforce.

Then, it needs to pass data to a pre-existing RPA process which includes a User Task for data integrity purposes.

The output of the RPA process needs to be used to create a record in NetSuite.

According to best practices, how should this automated process be structured?

- A. 1. A Salesforce flow triggers on the creation of the record and makes an outbound request to a MuleSoft Composer flow. 2. Then, the same MuleSoft Composer flow calls the RPA process and uses the result to create a record in NetSuite.
- B. 1. A MuleSoft Composer flow triggers on the creation of the record and calls the RPA process. 2. Then, the same flow uses the response to create a record in NetSuite. B 1. A Salesforce flow triggers on the creation of the record and calls too RPA process. 2. Then, the same flow uses the response to create a record in NetSuite.
- C. 1. A MuleSoft Composer flow triggers on the creation of the record and calls the RPA process. 2. Then, a second MuleSoft Composer flow triggers when the RPA process is completed and creates a record in NetSuite.

Answer: B

Explanation:

To structure the automated process to meet the given criteria, the following approach is recommended:

MuleSoft Composer Flow Triggers on Record Creation:

Use MuleSoft Composer to create a flow that is triggered when a new record is created in Salesforce. This is done by setting up a trigger event in MuleSoft Composer that listens for new record creation events in Salesforce.

Call the RPA Process:

Once the flow is triggered, it should call the pre-existing RPA process. MuleSoft Composer can invoke MuleSoft RPA bots, and you can pass the necessary data from the Salesforce record to the RPA process.

The RPA process will include the User Task for data integrity purposes.

Use the RPA Process Output to Create a Record in NetSuite:

After the RPA process completes, the MuleSoft Composer flow can capture the output from the RPA process.

The same MuleSoft Composer flow will then use this output to create a record in NetSuite, ensuring a seamless data transfer and process automation.

NEW QUESTION # 41

Northern Trail Outfitters developed an integration between its two Salesforce orgs using MuleSoft Composer. Which two actions should be taken before testing the Composer flow? (Choose two.)

- A. Ensure the flow trigger is connected to a sandbox instance of Salesforce.
- B. Ensure action steps are connected to a sandbox instance of Salesforce.
- C. Ensure MuleSoft Composer is installed on both the source and target orgs.
- D. Ensure the credentials to the target production org are still valid.

Answer: A,B

NEW QUESTION # 42

.....

We take so much pride in the high pass rate of our Mule-Dev-202 study questions because according to the statistics from the feedbacks of all of our customers, under the guidance of our Mule-Dev-202 exam materials the pass rate has reached as high as 98% to 100%, which marks the highest pass rate in the field. So if you really want to pass the Mule-Dev-202 Exam as well as getting the certification with no danger of anything going wrong, just feel rest assured to buy our Mule-Dev-202 learning guide.
