Latest SAP C-IBP-2502 Exam Pass4sure & C-IBP-2502 Relevant Answers

If you are wandering for C-IBP-2502 study material and the reliable platform that will lead you to success in exam, then stop considering this issue. Itcertking is the solution to your problem. They offer you reliable and updated C-IBP-2502 exam questions. The exam questions are duly designed by the team of subject matter experts; they are highly experienced and trained in developing exam material. Itcertking offers a 100% money back guarantee, in case you fail in your C-IBP-2502. You claim revert, by showing your transcript and undergoing through the clearance process. Also, we provide 24/7 customer service to all our valued customers. Our dedicated team will answer all your all queries related to C-IBP-2502.

SAP C-IBP-2502 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Key Figures & Attributes: This section of the exam measures the skills of supply chain analysts and focuses on the key figures and attributes used in planning. It covers how to define and configure key figures to ensure accurate data representation and decision-making. Candidates are also tested on their ability to manage attributes that support various planning scenarios.
Topic 2	<ul style="list-style-type: none"> • Demand Planning: This section measures the skills of demand planners and focuses on the core concepts of demand planning. It includes understanding forecasting techniques, demand sensing, and demand propagation. Candidates are tested on their ability to manage demand signals and align planning with business objectives.
Topic 3	<ul style="list-style-type: none"> • Model Sales & Operations Processes: This section targets operations managers and evaluates knowledge of sales and operations planning. It covers the alignment of supply and demand, scenario planning, and decision-making processes to optimize operational efficiency. Candidates will be assessed on their ability to configure models that support strategic business goals.
Topic 4	<ul style="list-style-type: none"> • Model Supply Processes: This section assesses the expertise of supply chain planners in designing and managing supply processes. It includes setting up sourcing, inventory management, and supply constraints. Candidates will be evaluated on their ability to model supply networks and optimize resource allocation.
Topic 5	<ul style="list-style-type: none"> • Analytics and Reporting: This section evaluates the expertise of reporting specialists in generating and interpreting reports within SAP. It covers key analytical tools and reporting functions that provide insights into planning performance. Candidates will be assessed on their ability to extract, analyze, and present data effectively to support business decisions.

SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q44-Q49):

NEW QUESTION # 44

What are some of the prerequisites for configuring a planning area that results in a successful consistency check? Note: There are 2 correct answers to this question.

- A. Specify a planning horizon in the planning area for each level of the assigned time profile
- B. Assign the compound master data type and its component master data types
- C. Configure at least one calculated key figure for the planning area
- D. Configure at most two input key figures on the same planning level in a key figure calculation

Answer: A,B

Explanation:

A successful consistency check in SAP IBP ensures the planning area's configuration is valid, per SAP IBP's documentation.

* Option A: Configure at least one calculated key figure for the planning area This is incorrect.

Calculated key figures are optional; a planning area can function with only stored key figures.

* Option B: Specify a planning horizon in the planning area for each level of the assigned time profile This is correct. The planning horizon (e.g., past/future periods) must align with the time profile levels (e.g., week, month) for data consistency, a prerequisite, per SAP IBP's setup.

* Option C: Configure at most two input key figures on the same planning level in a key figure calculation This is incorrect. There's no such limit; calculations can use multiple inputs, depending on complexity.

* Option D: Assign the compound master data type and its component master data types This is correct. Compound types (e.g., SOURCECUSTOMER) and their components (e.g., Customer, Location) must be assigned for network consistency, per SAP IBP's documentation.

Thus, B and D are prerequisites, per SAP IBP's official consistency check requirements.

NEW QUESTION # 45

What function would you use to configure a year-to-date calculation?

- A. Last Period Aggregation
- B. Rolling Aggregation

- C. Dynamic Rolling Aggregation
- D. Cumulative Aggregation

Answer: D

Explanation:

A year-to-date (YTD) calculation in SAP IBP sums values from the start of the year to the current period, a common time-series requirement.

* Option A: Rolling Aggregation This is incorrect. Rolling aggregation typically refers to a moving window (e.g., last 3 months), not a fixed YTD scope.

* Option B: Last Period Aggregation This is incorrect. Last period aggregation focuses on the most recent period, not a cumulative YTD total.

* Option C: Cumulative Aggregation This is correct. The CUMULATE function in SAP IBP (e.g., KF2 = CUMULATE(KF1)) calculates a running total from the start of the horizon (e.g., year) to each period, ideal for YTD, per SAP IBP's calculation documentation.

* Option D: Dynamic Rolling Aggregation This is incorrect. Dynamic rolling implies a flexible window, not a fixed YTD accumulation. Thus, C is the correct function for a YTD calculation, per SAP IBP's official capabilities.

NEW QUESTION # 46

You want to maintain key figure values for a new attribute and value combination, using SAP IBP, add-in for Microsoft Excel, and you are receiving an error related to missing combinations. How can you resolve this problem? Note: There are 2 correct answers to this question.

- A. Use the Manage Master Data app to create missing combinations
- B. Use the function New Planning Object in Excel UI to create missing combination
- C. Use the Data Integration app to upload the missing combinations
- D. Use the Copy Operator to create the missing combinations

Answer: B,C

Explanation:

Errors for missing combinations in SAP IBP Excel occur when key figure data references non-existent planning objects (e.g., Product-Location pairs), per SAP IBP's documentation.

* Option A: Use the Data Integration app to upload the missing combinations This is correct. The Data Integration Jobs app can import new planning object combinations (e.g., via CSV), resolving the error, per SAP IBP's data management guides.

* Option B: Use the Manage Master Data app to create missing combinations This is incorrect. The Manage Master Data app edits existing master data, not compound combinations directly for planning objects.

* Option C: Use the function New Planning Object in Excel UI to create missing combination This is correct. The "New Planning Object" feature in the Excel add-in creates missing combinations (e.g., PERPRODLOC) on the fly, per SAP IBP's Excel capabilities.

* Option D: Use the Copy Operator to create the missing combinations This is incorrect. The Copy Operator transfers key figure data, not creates new planning object combinations.

Thus, A and C resolve the issue, per SAP IBP's official tools and processes.

NEW QUESTION # 47

The Planner Workspaces is an important User Interface of SAP IBP for Supply Chain. What are the value drivers to use this as a planner? Note: There are 3 correct answers to this question.

- A. It combines various components into one user interface
- B. It combines the data from multiple planning areas into one user interface
- C. It can trigger SAP S/4HANA transactions in real time
- D. Issues can be identified and solved with special functions
- E. Application jobs can be started from this user interface

Answer: A,D,E

Explanation:

Planner Workspaces in SAP IBP is a Fiori-based UI that integrates planning tools, analytics, and workflows, enhancing planner productivity. Its value drivers are outlined in SAP IBP's UI documentation.

* Option A: Issues can be identified and solved with special functions This is correct. Alerts and playbooks in Planner Workspaces help identify and resolve issues (e.g., supply shortages), a key value driver, per SAP IBP's features.

* Option B: It combines various components into one user interface This is correct. It integrates planning views, charts, and alerts into a single UI, streamlining workflows, a core benefit, per SAP IBP's documentation.

* Option C: It can trigger SAP S/4HANA transactions in real time This is incorrect. Planner Workspaces focuses on IBP planning, not real-time S/4HANA transaction execution, which requires integration tools like CI-DS.

* Option D: It combines the data from multiple planning areas into one user interface This is incorrect. It operates within one planning area; combining multiple areas requires separate configurations or views, not a native feature.

* Option E: Application jobs can be started from this user interface This is correct. Planners can trigger jobs (e.g., Copy Operator) directly from Planner Workspaces, enhancing efficiency, per SAP IBP's UI capabilities.

Thus, A, B, and E are value drivers, per SAP IBP's official Planner Workspaces description.

NEW QUESTION # 48

Which planning operators can be executed in a time-series-based planning area? Note: There are 2 correct answers to this question.

- A. Constrained Forecast Run
- B. Deployment Optimizer
- C. Shelf Life Heuristics
- D. Finite Heuristics

Answer: A,D
