A full refund guarantee (terms and conditions apply) offered by ExamsLabs will save you from fear of money loss.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q20-Q25):

NEW QUESTION # 20
Which three componentscan be used to modify the user experience in the Order Summary detail page?

- A. Related List-Single
- B. Related List - Double
- C. Tabs
- D. Accordion

Answer: A,C,D

Explanation:
Three components that can be used to modify the user experience in the Order Summary detailpage are:
Tabs. Tabs are a type of component that allow users to switch between different views or subpages on a record page. Tabs can contain other components, such as charts, reports, or custom components, that display different information orfunctionality related to a record. The administrator can use the Lightning App Builder to add and customize tabs on the Order Summary detail page to give users more options and flexibility.
Accordion. Accordion is a type of component that allow users to expand and collapse sections of a record page. Accordion can contain other components, such as fields, related lists, or custom components, that display different information or functionality related to a record. The administrator can use the Lightning App Builder to add and customize accordion on the Order Summary detail page to give users more control and visibility.
Related List-Single. Related List-Single is a type of component that displays a single related list for a record.
A related list is a list ofrecords that are linked to another record by a relationship field, such as lookup or master-detail. The administrator can use the Lightning App Builder to add and customize related list-single on the Order Summary detail page to give users more access andcontext.

NEW QUESTION # 21
How can an administrator add visibility rules for the buttons in the Highlights Panel on the Order Summary record page?

- A. Modify the Lightning Record Page Highlights Panel using Dynamic Actions
- B. Navigate to the Order Summary object in Setup and modify the Highlights Panel visibility rules
- C. Create a custom Highlights Panel component
- D. Modify the visibility rules of the Highlights Panel Actions in the page layout

Answer: A

Explanation:
Dynamic Actions allow an administrator to add visibility rules for the buttons in the Highlights Panel on the Lightning Record Page. Dynamic Actions let you configure when and where actions appear on a record page based on criteria such as record field values, user permissions, or device type.

NEW QUESTION # 22
What does a summary object represent?

- A. A dynamic view of underlying data

- B. An individual change lo financial data
- C. A change lo an underlying record.
- D. A discount to underlying data

Answer: A

Explanation:
A summary object represents a dynamic view of underlying data. A summary object is a type of object that aggregates data from related records and displays it in a single record. For example, an Order Summary object represents the financial summary of an order that is received from an external system, such as B2C Commerce or B2B Commerce. An Order Summary object aggregates data from related Order Item Summary records and displays it in fields such as total amount, tax amount, discount amount, etc.

NEW QUESTION # 23
What three steps are requiredwhen deploying changes via change sets?

- A. Create thechange set in the sandbox org
- B. Add the change set to the release schedule in the target org
- C. Upload the change set to the target org
- D. Approve the change set in the sandbox org
- E. Deploy the change set in the target org

Answer: A,C,E

Explanation:
Three steps that are required when deploying changes via change sets are:
Create the change set in the sandbox org. This is the first step where the administrator selects the metadata components that they wantto deploy and adds them to a change set in the source org, which is usually a sandbox org.
Upload the change set to the target org. This is the second step where the administrator sends the change set from the source org to the destination org, which is usually a production org or another sandbox org. The administrator needs to have a deployment connection with the target org and permission to upload change sets.
Deploy the change set in the target org. This is the final step where the administrator validates and deploys the change set in the destination org. The administrator needs to have permission to deploy change sets and resolve any deployment errors or warnings.

NEW QUESTION # 24
A customer orders a product through B2C Commerce but changes the quantity ordered after the Order Summary record is created in Order Management. Later, the customer returns one of the products. Which objects will be created in Order Management?

- A. A Return Order object and Change Order object
- B. A Cancel Order object and Return Order object
- C. A Change Order object and Cancel Order Object
- D. The Order Summary object and Change Order object

Answer: A

Explanation:
The objects that will be created in Order Management when a customer orders a product through B2C Commerce but changes the quantity ordered after the Order Summary record is created in Order Management, and then returns one of the products are:
A Return Order object. A Return Order is a record that represents a return request for an order or part of an order. A Return Order has a lookup relationship to both Order Summary and Change Order objects, and it contains information such as the return reason, status, date, etc.
A Change Order object. A Change Order is a record that represents a change request for an order or part of an order. A Change Order has a lookup relationship to the Order Summary object, and it contains information such as the change type, status, date, etc.
