Plat-Admn-301 Neuesten und qualitativ hochwertige Prüfungsmaterialien bietet - quizfragen und antworten

Die simulierten Prüfungen zu machen können Ihre Selbstbewusstsein erstarken. Mit der Simulations-Software Testing Engine von unserer Salesforce Plat-Admn-301 können Sie die realistische Atmosphäre dieser Prüfung erfahren. Diese Erfahrungen sind sehr wichtig für Sie bei der späteren echten Salesforce Plat-Admn-301 Prüfung. Neben Salesforce Plat-Admn-301 haben wir auch viele andere IT-Prüfungsunterlagen geforscht. Diese Prüfungshilfe können Sie auf unserer Webseite finden. Wenn Sie irgend bezügliche Fragen haben, können Sie einfach mit unserem 24/7 online Kundendienst Personal kommunizieren.

Salesforce Certified Platform Administrator II Plat-Admn-301 Prüfungsfragen mit Lösungen (Q67-Q72):

67. Frage

Ursa Major Solar allows accounts to apply for loans to purchase solar panrnts. Financial information will be stored in a custom object. Only finance team members should see the related financial information about the account.

What kind of field should the administrator create in the custom object?

- A. Hierarchical Relationship
- B. Lookup Relationship
- C. External Relationship
- **D. Master-Detail Relationship**

Antwort: D

Begründung:

A lookup relationship is a type of field that links one object to another object. It allows you to access related data from another object and display it on a record page. A lookup relationship can be used to link the custom object that stores financial information to the Account object, so that only finance team members can see the related financial information about the account. References: https://help.salesforce.com/s/articleView?id=sf.relationships_lookup.htm&type=5

68. Frage

The accounting team at Universal Containers is looking to roll out two new custom objects: a parent Invoice object and a child Payment object. Whenever a Payment record is created, the Invoice object should be updated to reflect the current outstanding value of the Invoice.

What should the administrator do to build this functionality?

- A. Create a master-detail relationship on the Payment and a workflow cross object field update.
- B. Create a lookup-relationship on the Payment and a workflow cross object field update.
- **C. Create a master-detail relationship on the Payment with a Roll-up Summary field on the Invoice.**
- D. Create a lookup-relationship on the Payment with a Roll-up Summary field on the Invoice.

Antwort: C

Begründung:

Creating a master-detail relationship on the Payment with a Roll-up Summary field on the Invoice will build this functionality. A master-detail relationship creates a parent-child relationship between two objects, where the child records inherit the sharing and security settings of their parent. A Roll-up Summary field calculates values from related child records, such as count, sum, min, or max. In this case, the Roll-up Summary field on the Invoice can calculate the sum of all Payments related to it and subtract it from the Invoice amount to get the current outstanding value. References: https://help.salesforce.com/s/articleView?id=sf.relationships_considerations.htm&type=5 https://help.salesforce.com/s/articleView?id=sf.fields_about_roll_up_summary_fields.htm&type=5

69. Frage

A custom object called Item has a many-to-many relationship with the Account and Quota objects. At Cloud Kicks, account owners are changed frequently while ownership of Quota records remains unchanged. When an account owner is updated, the new account owner can only see Item records if they are also the owner of the Quota record.

What step should the administrator take to give access to all Item records?

Change the data format of the Quota relationship field from master-detail to lookup.

- A. Re-assign the Quota master-detail to the primary and the
- B. Create a Quota criteria-based sharing rule using ISCHANGED for the Account Owner field.
- **C. Give the account owner Read access to both the Account and the Quota objects**
- D. Account master-detail to secondary.

Antwort: C

Begründung:

Giving the account owner Read access to both the Account and the Quota objects will give access to all Item records. Since Item is a junction object between Account and Quota, users need to have at least Read access to both parent objects to see Item records. If users have access to only one parent object, they will not be able to see Item records related to the other parent object.

70. Frage

The sales department has asked to limit access to the Amount field on the Opportunity to only those users. In the sales department and on the executive team, Northern Trail Outfitters uses six custom profiles including Sales User, Marketing user, call Center user, Executive User, Sales Manager user, and a call Center Manager user. Field level access is removed from three of the profiles in the sandbox.

What action should an administrator take to make sure this change is in production?

- A. Create a sandbox template and push it to production to reflect the update.
- B. Process a change set with the profiles that should no longer have access to the field.
- **C. Deploy a change set from the sandbox to production including the Amount field with all the custom profiles.**
- D. Manually restrict access to this field for each profile via Setup Just like the sandbox.

Antwort: C

Begründung:

A change set is a tool that allows you to send customizations from one Salesforce org to another. A change set can contain components such as objects, fields, profiles, permission sets, workflows, and more. You can use change sets to migrate changes from a sandbox org to a production org or between two sandbox orgs that are affiliated with the same production org. In this case, you can deploy a change set from the sandbox to production that includes the Amount field and all the custom profiles that need access to it. This way, you can update the field-level security settings for the field on each profile in one deployment. References: <https://help.salesforce.com/s/articleView?id=sf.changesets.htm&type=5>

71. Frage

The finance director at Cloud Kicks asks the administrator for an exception report that shows all B2C accounts that are missing the credit card number. The credit card number is a classic encrypted field.

What action should the administrator take to meet this requirement?

- A. Add 'View Encrypted Fields' to a permission set assigned to Finance and system administrators and a summary report filtered by credit card number.
- B. Unmask the encrypted credit card number field to make it available and add a custom filter to a report where credit card number is blank.
- **C. Create a summary report that includes a cross-filter to the Account object with a sub-filter for credit card number equal to null.**
- D. Build a custom checkbox called 'Has Credit Card' that Finance checks when a credit card is recorded and a tabular report filtered on the checkbox equal to false.

Antwort: C

Begründung:

A summary report with a cross-filter is a type of report that allows you to summarize data by grouping rows and columns and applying filters based on related objects and fields. A cross-filter is a filter that lets you include or exclude records in your report based on related objects and their fields. In this case, you can create a summary report that includes a cross-filter to the Account object with a sub-filter for credit card number equal to null. This will show you all B2C accounts that are missing the credit card number, regardless of whether it is encrypted or not.
