**Quiz CheckPoint 156-215.82 - Check Point Certified Security Administrator - R82 Marvelous Valid Exam Vce Free**

If you are the first time to prepare the 156-215.82 exam, it is better to choose a type of good study materials. After all, you cannot understand the test syllabus of the 156-215.82 exam in the whole round. It is important to predicate the tendency of the 156-215.82 study materials if you want to easily pass the exam. And our 156-215.82 Exam Questions are the one which can exactly cover the latest information of the exam in the first time for our professionals are good at this subject and you can totally rely on us.

## CheckPoint Check Point Certified Security Administrator - R82 Sample Questions (Q282-Q287):

### NEW QUESTION # 282

In order to see real-time and historical graph views of Security Gateway statistics in SmartView Monitor, what feature needs to be enabled on the Security Gateway?

- **A. Monitoring Blade**
- B. Logging & Monitoring
- C. None - the data is available by default
- D. SNMP

**Answer: A**

Explanation:

In order to see real-time and historical graph views of Security Gateway statistics in SmartView Monitor, the Monitoring Blade feature needs to be enabled on the Security Gateway. The Monitoring Blade is a software blade that collects and displays network and security performance data from the Security Gateway, such as traffic, throughput, connections, CPU usage, memory usage, etc. The Monitoring Blade can be enabled or disabled on each Security Gateway from the SmartConsole. [Monitoring Blade], [SmartView Monitor]

### NEW QUESTION # 283

R80.10 management server can manage gateways with which versions installed?

- **A. Versions R76 and higher**
- B. Version R75 and higher
- C. Versions R75.20 and higher
- D. Versions R77 and higher

**Answer: A**

Explanation:

The R80.10 management server can manage gateways with versions R76 and higher<sup>34</sup>. Versions lower than R76 are not supported by the R80.10 management server. Check Point R80.10 Release Notes, Free Check Point CCSA Sample Questions and Study Guide

### NEW QUESTION # 284

Which one of the following is TRUE?

- A. Pre-R80 Gateways do not support ordered layers
- B. Ordered policy is a sub-policy within another policy
- C. One policy can be either inline or ordered, but not both
- **D. Inline layer can be defined as a rule action**

**Answer: D**

Explanation:

The answer is C because inline layer can be defined as a rule action in a policy layer. Inline layer is a sub-policy that contains additional rules that are applied only if the parent rule matches. Ordered layer is a policy layer that contains rules that are applied in order, from top to bottom. One policy can be either inline or ordered, but not both. Pre-R80 Gateways do support ordered layers, but not inline layers<sup>5</sup> Check Point R81 Policy Layers and Sub-Policies, [Check Point R81 Security Gateway Administration Guide]

### NEW QUESTION # 285

The Network Operations Center administrator needs access to Check Point Security devices mostly for troubleshooting purposes. You do not want to give her access to the expert mode, but she still should be able to run tcpdump. How can you achieve this requirement?

- A. Add tcpdump to CLISH using add command. Create a new access role. Add tcpdump to the role. Create new user with any UID and assign role to the user.
- B. Add tcpdump to CLISH using add command. Create a new access role. Add tcpdump to the role. Create new user with UID 0 and assign role to the user.
- C. Create a new access role. Add expert-mode access to the role. Create new user with UID 0 and assign role to the user.
- D. Create a new access role. Add expert-mode access to the role. Create new user with any UID and assign role to the user.

**Answer: A**

Explanation:

To achieve the requirement of giving the Network Operations Center administrator access to Check Point Security devices mostly for troubleshooting purposes, but not to the expert mode, and still allowing her to run tcpdump, you need to:

Add tcpdump to CLISH using add command. This command adds a new command to the Command Line Interface Shell (CLISH) that allows running tcpdump without entering the expert mode .

Create a new access role. This option defines a set of permissions and commands that can be assigned to a user or a group of users. Add tcpdump to the role. This option grants the permission to run tcpdump to the role.

Create new user with any UID and assign role to the user. This option creates a new user account with any User ID (UID) and assigns the role that has tcpdump permission to the user.

### NEW QUESTION # 286

John is using Management HA. Which Smartcenter should be connected to for making changes?

- A. primary Smartcenter
- B. active Smartcenter
- C. connect virtual IP of Smartcenter HA
- D. secondary Smartcenter

**Answer: B**

Explanation:

The SmartCenter that should be connected to for making changes is the active SmartCenter. The active SmartCenter is the one that is currently synchronizing its configuration with the secondary SmartCenter and handling the communication with the gateways . The primary SmartCenter is the one that was initially configured as the main server, but it may become inactive if a failover occurs. The virtual IP of SmartCenter HA is used to access the SmartConsole, not to make changes.
