

100% Pass 2026 Reliable VMware Questions 3V0-22.25 Exam

P.S. Free & New 3V0-22.25 dumps are available on Google Drive shared by Free4Dump: <https://drive.google.com/open?id=1tm-HUt7ynkVGozYWO-RUmp-j0nx1HJGW>

If you really want to pass the 3V0-22.25 exam faster, choosing a professional product is very important. Our 3V0-22.25 study materials can be very confident that we are the most professional in the industry's products. We are constantly improving and just want to give you the best 3V0-22.25 learning braindumps. And we have engaged for years to become a trustable study platform for helping you pass the 3V0-22.25 exam.

Together with our excellent 3V0-22.25 learning guide, the after-sale service staffs in our company share a passion for our customers on our 3V0-22.25 exam questions, an intense focus on teamwork, speed and agility, and a commitment to trust and respect for all individuals. At present, our company is a leading global provider of 3V0-22.25 Preparation exam in the international market. You may hear our website from your friends, colleagues or classmates for we have become a brand and professional on the 3V0-22.25 practice engine.

3V0-22.25 Relevant Exam Dumps | 3V0-22.25 Reliable Braindumps Free

Free4Dump is a professional website. It focuses on the most advanced VMware 3V0-22.25 for the majority of candidates. With Free4Dump, you no longer need to worry about the VMware 3V0-22.25 exam. Free4Dump exam questions have good quality and good service. As long as you choose Free4Dump, Free4Dump will be able to help you pass the exam, and allow you to achieve a high level of efficiency in a short time.

VMware Advanced VMware Cloud Foundation 9.0 Operation Sample Questions (Q27-Q32):

NEW QUESTION # 27

An administrator is tasked with configuring the allocation model in the VCF Operations Policies. The allocation model must be enabled at the level of the datastore. The current disk space usage on datastore of an existing virtual machine must be used to

determine how many virtual machines will fit on the datastore. What two settings must the administrator configure in the policy definition at the datastore level? (Choose two.)

- A. The disk space allocation
- **B. The custom profile**
- C. The capacity buffer
- D. Peak Utilization
- **E. The overcommit ratio**

Answer: B,E

Explanation:

The administrator must configure the overcommit ratio and activate the appropriate custom profile at the datastore policy level. In VCF Operations, the Allocation Model is enabled from the policy Capacity card by unlocking Allocation Model and setting the overcommit ratio for CPU, memory, or disk space. For a Datastore, the allocation model specifically allows the administrator to set the overcommit ratio for datastore disk space, which controls how allocated storage capacity is calculated rather than relying only on demand-based usage. The second requirement is to use the current disk space usage of an existing VM to determine how many similar VMs can fit on the datastore. That is handled by a custom profile. Custom profiles define a hypothetical VM configuration and calculate VM remaining for objects such as datastores, datastore clusters, and cluster compute resources. The custom profile wizard also allows metric values to be copied from an existing object, including by VM name, vCenter, VM tag, or custom group. Peak utilization and capacity buffer do not enable allocation modeling or define VM-fit profiles. Reference topic: Objective 4.2 - Manage VCF Capacity / Allocation Model / Custom Profiles / Policy Capacity Settings.

NEW QUESTION # 28

A user complains that they are receiving email notifications for an alert named "vCenter - VM Created", even though they never created this alert and cannot find it in their "My Alerts" list.

What is the mostly likely reason?

- A. The user's email address was hardcoded into the liagent.ini file.
- B. The user has a virus.
- C. The system is sending emails to "Everyone".
- **D. The alert is a Content Pack Alert or a Shared Alert created by an administrator, and the user's email was added to the Subscription list (or the user is part of a distribution list that was subscribed).**

Answer: D

NEW QUESTION # 29

A DevOps team uses a modern ChatOps platform (e.g., Slack, Microsoft Teams) for incident management. They require VCF Operations for Logs alerts to be sent to a specific channel URL with a custom JSON payload format.

Which notification channel provides this flexibility?

- A. SNMP Trap.
- B. vRealize Operations Integration.
- **C. Webhook. This channel allows the administrator to define a generic HTTP POST destination and fully customize the Payload (JSON/XML) using templates and variables (e.g., {AlertName}, {NumHits}) to match the API requirements of the target chat system.**
- D. SMTP (Email).

Answer: C

NEW QUESTION # 30

A user asks: "Why does the 'Capacity Remaining' badge show 50% free, but the 'Reclaimable Capacity' badge shows 0 GB?"

Context

Model: Demand

Cluster Utilization: 50%

VMs: All active, sized perfectly to their demand.

What is the explanation?

- A. Reclaimable Capacity only updates monthly.
- B. The Capacity Model is broken.
- C. The Allocation model is overriding the Demand model hiddenly.
- D. The cluster has free space for new workloads (Capacity Remaining), but the existing workloads are efficient and have no waste (oversized resources) to give back (Reclaimable).

Answer: D

NEW QUESTION # 31

A user views a dashboard containing a "Event List" (Table) widget. They want to see the "Source IP" column in the table, but currently, only "Timestamp" and "Text" are shown. How can the user add this column to the widget view?

- A. Use a regex to rewrite the text.
- B. In the widget editor (or Interactive Analytics view), expand the "Fields" pane on the left (or use the Field visibility selector above the table), locate "source_ip", and ensure it is checked/added to the table columns view. Then save the widget.
- C. It is not possible; table widgets are fixed.
- D. Double-click the timestamp.

Answer: B

NEW QUESTION # 32
