

Free PDF 2026 Salesforce Accurate Plat-Admn-202: Test Salesforce Certified Platform App Builder Sample Questions

2026 Latest Real4test Plat-Admn-202 PDF Dumps and Plat-Admn-202 Exam Engine Free Share: <https://drive.google.com/open?id=1tWMu8u3zsGUt4f7mFt1wckEvSG39IEq>

Our desktop software Salesforce Plat-Admn-202 practice exam software provides a simulated scenario in which you may pick the Salesforce Plat-Admn-202 exam questions and schedule them to replicate an actual Salesforce exam-like situation. With each attempt of the Salesforce Plat-Admn-202 Practice Exam in this manner, your score is saved.

Salesforce Plat-Admn-202 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Salesforce Fundamentals: This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.
Topic 2	<ul style="list-style-type: none">• Data Modeling and Management: This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.

Topic 3	<ul style="list-style-type: none"> • Business Logic and Process Automation: This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.
Topic 4	<ul style="list-style-type: none"> • App Deployment: This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.
Topic 5	<ul style="list-style-type: none"> • User Interface: This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.

You can use the Soft version of our Plat-Admn-202 study materials to stimulate the exam to adjust yourself to the atmosphere of the real exam and adjust your speed to answer the questions. The other 2 versions also boost their own strength and applicable method and you could learn our Plat-Admn-202 training quiz by choosing the most suitable version to according to your practical situation.

Salesforce Certified Platform App Builder Sample Questions (Q149-Q154):

NEW QUESTION # 149

Universal Containers (UC) has a time-sensitive need for a custom component to be built in 4 weeks; UC developers require additional enablement to complete the work and are backlogged by several months.

Which option should an app builder suggest to meet this requirement?

- A. Use an AppExchange solution.
- B. Build a screen flow page.
- C. Build a Lightning record page.
- D. Use a Boit solution

Answer: A

Explanation:

An AppExchange solution is a pre-built application or component that can be installed from the Salesforce AppExchange, which is an online marketplace for Salesforce products. AppExchange solutions can help you meet your business needs quickly and efficiently, without requiring much development effort or expertise. You can browse and search for AppExchange solutions by category, industry, rating, price, and more.

NEW QUESTION # 150

DreamHouse Realty wants to import its property records from an external system into Salesforce. The app builder will use an external ID field to house the property ID from the external system.

Which two details should the app builder know when using external ID fields?

Choose 2 answers

- A. An external ID field can be a number field.
- B. An external ID field can be a phone field.
- C. An external ID field can be a text field.
- D. An external ID field can be a URL field.

Answer: A,C

Explanation:

An external ID field can be a number field or a text field, but not a URL field or a phone field. A URL field is used to store web addresses and a phone field is used to store phone numbers. An external ID field is used to store unique identifiers from an external system and it can be used for upsert operations

NEW QUESTION # 151

The app builder needs to change the data types of new custom fields. The app builder is not able to delete and recreate any of the fields, nor modify any apex code. Which data type change will require the app builder to perform the additional steps in order to retain existing functionalities?

- A. Changing the data type of a field used in an apex class from number to text.
- B. Changing the data type of a field used in a report from a text to an encrypted field
- C. Changing the data type of a field used in lead conversion from number to text
- D. Changing the data type of a field used as an external id from number to text.

Answer: A

Explanation:

Changing the data type of a field used in an apex class from number to text will require the app builder to perform additional steps in order to retain existing functionalities. This is because changing the data type of a field may affect the apex code that references or manipulates the field value, and may cause compilation errors or unexpected results. The app builder will need to update the apex code to handle the new data type and ensure that the logic and calculations are still correct. Option B is incorrect because changing the data type of a field used in a report from a text to an encrypted field will not require additional steps, as encrypted fields can still be used in reports with some limitations. Option C is incorrect because changing the data type of a field used as an external id from number to text will not require additional steps, as external id fields can be either number or text. Option D is incorrect because changing the data type of a field used in lead conversion from number to text will not require additional steps, as lead conversion fields can be mapped regardless of their data types.

NEW QUESTION # 152

DreamHouse Realty (DHR) recently acquired Cloud Kicks (CK), a company that is still on Salesforce Classic. DHR is keeping the CK Salesforce org; however, it will migrate this org to Lightning Experience.

Where should the app builder find prebuilt resources to help with this project and overall adoption?

- A. Flow Builder
- B. Import Wizard
- C. Lightning Object Creator
- D. AppExchange

Answer: D

Explanation:

AppExchange is a marketplace where app builders can find prebuilt resources to help with migration and adoption projects. AppExchange offers apps, components, solutions, and consulting services that can assist with moving from Classic to Lightning Experience. Import Wizard, Lightning Object Creator, and Flow Builder are not sources of prebuilt resources, but tools for data import, object creation, and automation respectively.

NEW QUESTION # 153

An app builder at Ursa Major Solar has been working on a new custom app in a sandbox that has been upgraded to the next major Salesforce version, and their production instance is still on the current Salesforce version. The development is complete and they are

ready to deploy a change set.

What should the app builder consider when planning the deployment?

- A. It will fail if there is a feature only available in the next version.
- B. The change set components will be upgraded to the next version in production.
- C. The change set will be automatically deployed when production is upgraded.
- D. The deployment is not possible due to different versions.

Answer: A

Explanation:

It will fail if there is a feature only available in the next version. According to the Salesforce documentation, "If your sandbox is on a newer version than your production org, you can't deploy any components that are new in the sandbox version." The change set components will not be upgraded to the next version in production, the change set will not be automatically deployed when production is upgraded, and the deployment is possible if there are no new features involved.

NEW QUESTION # 154

.....

We will be happy to assist you with any questions regarding our products.
