AD0-E725 Updated Demo, AD0-E725 Exam Tutorials

This Adobe Commerce Developer Expert (AD0-E725) practice exam software is easy to use. A free demo version of this format is also available to assess it before buying. It is compatible with all Windows computers. This Adobe AD0-E725 Practice Test software familiarizes you with the real Adobe Commerce Developer Expert (AD0-E725) exam pattern. You must have an active Internet connection to validate your product license.

Adobe Commerce Developer Expert Sample Questions (Q38-Q43):

NEW QUESTION # 38

A Developer working on an Adobe Commerce Cloud project encounters an issue with the database service that requires investigation. To troubleshoot the issue, the Developer decides to securely access the cloud services from the local machine to directly interact with the services and run diagnostic commands.

Which command step is required to achieve this?

- A. Use the `magento-cloud tunnel:open` command to access the cloud services.
- B. Use the `magento-cloud service:connect` command to access the cloud services.
- C. Use the `php bin/magento cloud:tunnel:connect` command to access the cloud services.

Answer: A

Explanation:

To securely access services (such as MySQL, Redis, Elasticsearch) running in Adobe Commerce Cloud, developers must use the tunnel feature. The correct command is:

magento-cloud tunnel:open

This opens a secure tunnel from the local machine to the remote cloud environment services.

A is incorrect; there is no cloud:tunnel:connect Magento command.

B is incorrect; service:connect is not a valid Cloud CLI command.

C is correct.

Reference:

Adobe Commerce Cloud CLI - Tunnel to services

NEW QUESTION # 39

A Developer working on a Magento 2 store needs to modify the Content Security Policy (CSP) to allow loading of images from a trusted external domain while maintaining strict policies for other resources. To accomplish this, the `csp_whitelist.xml` file must be updated.

Which code snippet should the Developer use to update the CSP configuration?

- A.

```
<csp>
  <policies>
    <policy id="media-src">
      <values>
        <value id="trusted_image" type="host">website.com</value>
      </values>
    </policy>
  </policies>
</csp>
```
- B.

```
<policies>
  <policy id="img-src">
    <values>
      <value id="trusted_image" type="host">website.com</value>
    </values>
  </policy>
</policies>
```
- C.

```
<policies>
  <policy id="default-src">
    <values>
      <value id="trusted_image" type="host">website.com</value>
    </values>
  </policy>
</policies>
```

Answer: B

Explanation:

To allow loading of external images, the policy that must be updated is `img-src` in the `csp_whitelist.xml`.

Option A (`default-src`) is too broad and not best practice.

Option C (`media-src`) applies only to audio/video sources, not images.

Thus, B is the correct solution.

NEW QUESTION # 40

A Developer connects to the Magento-Cloud CLI and creates a new branch for environment using the following Git command:

```
git checkout -b <branch-name>
```

The developer notices the branch is not activated and does not automatically build when changes are pushed to the remote environment.

Which solution will fix this issue?

- A. `magento-cloud environment:redeploy --no-wait` should be executed after branch creation.
- B. `magento-cloud environment:branch <branch-name>` should be used instead of Git commands.
- C. `git branch -b <branch-name>` should be used instead of Git checkout.

Answer: B

Explanation:

In Adobe Commerce Cloud, simply creating a Git branch locally does not automatically create a corresponding Cloud environment. The correct way is to use:

```
magento-cloud environment:branch <branch-name>
```

This ensures the environment is created in Cloud, builds automatically, and is linked to the new Git branch.

B redeploys an existing environment but does not create one.

C is just another Git command and does not activate the environment.

NEW QUESTION # 41

An Adobe Commerce Expert is tasked with configuring different pricing for products across a multi-site installation. Each website requires independent control of its prices while using the same catalog data.

What is the minimum store hierarchy structure required to achieve this?

- A. Multiple stores and a single store view for each store
- B. One website, one store, and multiple store views
- C. Multiple websites, each with one store and at least one store view

Answer: C

Explanation:

In Adobe Commerce, product prices are scoped at the website level. To allow different prices per site while sharing the same catalog, you must create multiple websites, each with its own store and store view(s).

A (multiple stores, single website) # shares the same price configuration.

B (multiple store views) # only useful for localization (translations), but pricing is still shared.

C is correct because each website maintains independent pricing.

Adobe Commerce Multi-site guide

NEW QUESTION # 42

A Developer is tasked with extending the GraphQL capabilities of a client's Adobe Commerce project by adding custom attributes to the product query.

Which step should the Developer take to correctly implement this GraphQL customization?

- A. Add aroundGetList and afterGetList plugins to the ProductRepositoryInterface to reflect the new attributes.
- B. Extend the ProductInterface by creating a schema.graphqls file in the custom module's etc directory.
- C. Add new attributes in the Adobe Commerce admin panel to reflect the additions.

Answer: B

NEW QUESTION # 43
