

Free PDF Quiz HP - Latest HPE7-A03 - Practice Aruba Certified Campus Access Architect Exam Exam

BONUS!!! Download part of PrepAwayETE HPE7-A03 dumps for free: https://drive.google.com/open?id=1nsWxZ4994lBfdXTUSd_U3du0S5kGZFL

Once you try our HPE7-A03 exam test, you will be motivated greatly and begin to make changes. Our study questions always update frequently to guarantee that you can get enough test banks and follow the trend in the theory and the practice. That is to say, our product boosts many advantages and to gain a better understanding of our HPE7-A03 question torrent. It is very worthy for you to buy our product. Not only can our study materials help you pass the exam, but also it can save your much time. What are you waiting for? Follow your passion and heart.

We all know that the importance of the HPE7-A03 certification exam has increased. Many people remain unsuccessful in its HPE7-A03 exam because of using invalid HPE7-A03 practice test material. If you want to avoid failure and loss of money and time, download actual Aruba Certified Campus Access Architect Exam (HPE7-A03) Questions of PrepAwayETE. This HP HPE7-A03 exam preparation material is important because it will help you cover each topic and understand it well.

Latest HPE7-A03 Exam Pass4sure, HPE7-A03 Visual Cert Test

Our HPE7-A03 Study Materials include 3 versions: the PDF, PC and APP online. You can understand each version's merits and using method in detail before you decide to buy our HPE7-A03 study materials. For instance, PC version of our HPE7-A03 training quiz is suitable for the computers with the Windows system. It is a software application which can be installed and it stimulates the real exam's environment and atmosphere. It builds the users' confidence and can be practiced and learned at any time.

HP Aruba Certified Campus Access Architect Exam Sample Questions (Q28-Q33):

NEW QUESTION # 28

What are the advantages of using VSX-pair instead of two discrete switches to connect servers, storage, firewalls, and other workloads?

- A. Both members in a VSX-pair can be upgraded without any downtime for the workload.
- B. The setup is much easier since both switches are sharing the same configuration.
- C. VMWare-Most can be connected with or without using LACP, regardless of their license.
- D. You can save half the number of licenses needed for AFC.

Answer: A

Explanation:

One of the key advantages of using a Virtual Switching Extension (VSX) pair instead of two discrete switches for connecting servers, storage, firewalls, and other workloads is that both members in a VSX pair can be upgraded without any downtime for the workload (Option C). VSX technology provides advanced high availability features that allow for non-disruptive software upgrades, meaning that one switch in the VSX pair can be upgraded while the other continues to handle network traffic, thereby maintaining continuous operation of the connected workloads.

This seamless failover capability ensures that there is no interruption to the critical services running on the network, making VSX an ideal solution for environments where uptime is paramount.

NEW QUESTION # 29

A global cruise line company needs to refresh its current fleet. They will refresh the insides of the ship to be cost-effective and increase their sustainability. They will replace the complete WLAN/LAN hardware of the ship. In this refresh, the company will not refresh its current security requirements. The CIO also wants to limit the number of unused ports in the switches. Future expansion will always mean a refresh of hardware.

They start with the smallest ship with a maximum of 800 guests

Each ship has a LAN infrastructure consisting of two core switches, up to 10 redundant distribution switches, and up to 500 access switches (400 cabins, 100 technical rooms). The Core switches are located in the MDF of the ship and the distribution switches are located in the IDFs of the ship. Each cabin and technical room gets one single access switch.

The cabling structure of the ship will not be refreshed. Each IDF is connected to the MDF by SMF, of which two pairs are available for the interconnect between the core and distribution. The length of SM fiber between MDF and IDF is less than 300 meters (930 ft) and the type used is OS1. Each cabin is connected by a single

OM2 pair to the IDF. the maximum length is 60 meters (200 ft). Each technical room is connected by a single

OM2 pair to the IDF. with lengths between 100 and 150 meters (320 and 500 ft).

For each cabin/technical room the customer is looking to replace their current fan-less 2530/2540 without changing the requirements, except they need to upgrade the uplink to distribution switch to 10GbE to handle the increased network traffic, and the technical rooms need redundant power.

The WLAN infrastructure will be 1:1 refreshed without new cabling or new AP locations. Their WLAN Infrastructure is based on the 200/300 series Indoor and outdoor APs running InstantOS (less than 300 APs).

The customer has no change in WLAN requirements.

The cruise line company will replace its current Internet connection before the LAN/WLAN refresh. The new Internet connection will provide a 99.8% uptime, which is needed to ensure the paid guest Wi-Fi is always operational. With this new Internet connection, the CIO of the cruise line wants to base the design on the ESP architecture from Aruba because Internet connection is guaranteed.

The week after the presentation of your design to the CIO of the cruise line company, the CIO calls you to discuss increasing the security of the wired network Infrastructure. Since one of their competitors had one of their cruise ships cyber hacked, the CSO of the cruise line has mandated increased security on the wired network. They have heard about dynamic segmentation and central and decentral overlay networks.

What would you advise as the most cost-efficient solution?

- A. Standardize on Aruba 6000 switches for the access layer, add a cluster of 9240 GWs. and Implement central overlay networks on UBT basis.
- B. Standardize on Aruba 6200 switches for the access layer, add a cluster of 9240 GWs. and Implement central overlay networks on UBT basis.
- **C. Standardize on Aruba 6300 switches for the access layer, add a cluster of 9240 GWs. and Implement central overlay networks on UBT basis.**
- D. Standardize on Aruba 6100 switches for the access layer, add a cluster of 9240 GWs. and Implement central overlay networks on UBT basis.

Answer: C

Explanation:

For a global cruise line company looking to refresh its fleet with a focus on sustainability and cost-effectiveness, while not changing its current security requirements, the most suitable option would be to standardize on Aruba 6300 switches for the access layer. The Aruba 6300 switches offer advanced security features and scalability, which is crucial for the dynamic and demanding environment of a cruise ship.

Additionally, implementing a cluster of 9240 Gateways and central overlay networks based on User-Based Tunneling (UBT) will enhance the security of the wired network infrastructure. This approach aligns with the Aruba ESP (Edge Services Platform) architecture, providing a unified infrastructure that integrates security, AI-powered operations, and cloud-native agility. The central

overlay networks will enable the cruise line to segment network traffic, apply consistent policies, and provide secure access across the fleet, meeting the increased security demands without compromising on performance or sustainability.

NEW QUESTION # 30

XYZ Regional Hospital is an integrated healthcare system of hospitals, neighborhood health centers, and small doctor offices. XYZ Regional Hospital has recently merged with 4x neighborhood health centers and 125 doctor branch offices. The wireless, wired access, and AAA

solutions are outdated and need to be replaced

XYZ Regional Hospital is looking to future-proof and improve efficiency across all sites by enhancing wired and wireless access and migrating to a centralized and unified wired/wireless and policy management that can provide uninterrupted availability of all systems.

Locations:

- XYZ Regional Hospital is located in New York City

- Dila Health Center is located in City A

- Mount Health Center is located in City B

- Rock Health Center is located in City C

- Branch clinics are located at different locations across the United States Requirements:

- Provide, via management software, one single pane of glass to manage wired and wireless IANs. and VPNs across campus, branch, and remote via web/cloud architecture providing near real-time Insight.

troubleshooting tools, and Service Level performance reporting.

- Seamless integration across wired, wireless. WAN. SD-Branch. IoT

- Provide secure wireless access to all the employees of the Regional Hospital and partners, as well as provide wireless Internet access to medical citizens when they visit our facilities.

- All-access points must support the following features and specifications: 802.11ax (Wi-Fi 6E Certified)

- Security options including WPA2/WPA3. 802.1X with Radius secure authentication

- Identify and authenticate every wireless and wired device

- End-to-end role-based security

- Seamless mobility across the hospital for medical learners, patients, and visitors

- Cuts Wi-Fi deployment times from days to hours and enables Zero-Touch deployments across the site

- Establishes a resilient, future-ready network infrastructure with the intelligence, scalability, and intuitive toolsets to meet emerging needs

- Fully redundant branch solution with dynamic path selection

The IT director of the hospital is concerned that the branch clinics will not have an onsite resource to troubleshoot any issues that may arise and is looking for a solution that would allow the hospital IT team to proactively monitor the branch offices.

Requirements:

* Monitor wireless and wired connections

* End-to-end view of experience identifying the point of failures

* Proactively troubleshoot Issues impacting application performance

What is the correct solution?

- A. HPE Aruba Networking ClearPass Device Insight
- B. Client Insight
- C. HPE Aruba Networking User Experience Insight
- D. AirWave

Answer: C

NEW QUESTION # 31

During the Stakeholder interview, an agenda is built where customer expectations are clarified. The customer is worried about future business requirements where network scalability and flexibility are key.

Which expectations can be considered for solving upcoming business problems? (Select two).

- A. critical needs
- B. pain points
- C. business outcomes
- D. anticipated growth
- E. network deployment

Answer: C,D

NEW QUESTION # 32

Which is true when it comes to Aruba Central licensing for gateways? (Select two.)

- A. SD-WAN Gateway functionality requires security licensing.
- B. Aruba Gateway normal licensing is subdivided into three categories: Foundation, Advanced, and Foundation Base.
- C. Aruba SD-Branch Gateway licenses allow normal WLAN Gateway features within a campus.
- D. Aruba WLAN Gateway licenses allow normal SD-Branch features within a campus.

Answer: B,C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

- * Aruba Central Licensing for Gateways Aruba has moved to a tiered subscription licensing model for gateways managed by Aruba Central. Licensing is divided into:
 - * Foundation Base - provides basic gateway management and monitoring.
 - * Foundation - enables standard gateway functionality such as WLAN gateway roles, routing, and tunneling.
 - * Advanced - adds enhanced capabilities such as SD-WAN features, security services, and advanced routing.
- * Why Option A is Correct Aruba Central licensing for gateways is indeed subdivided into three categories: Foundation Base, Foundation, and Advanced. This aligns directly with Aruba's documented Central licensing structure.
- * Why Option B is Incorrect SD-WAN functionality is not tied to "security licensing." Instead, SD-WAN features are unlocked with the Advanced license tier. Security services may also be enabled at that tier, but they are not a separate license requirement.
- * Why Option C is Correct Aruba SD-Branch Gateways (with appropriate Central licensing) can also provide WLAN Gateway features in a campus deployment. This is explicitly supported in Aruba's ESP and Central design guides, where branch gateways can terminate WLAN tunnels and provide role-based policy enforcement in addition to SD-WAN.
- * Why Option D is Incorrect The reverse is not true - Aruba WLAN Gateway licenses do not allow SD-Branch features. A WLAN gateway license is designed for campus WLAN tunnel termination and policy enforcement, but does not include SD-WAN branch functions.
- * Aruba Official Design Guide Reference:
 - * Aruba Central Licensing Overview: Gateway licensing is split into Foundation Base, Foundation, and Advanced.
 - * Aruba ESP Campus Design Guide: SD-Branch gateways can run both SD-WAN and WLAN Gateway roles when properly licensed.
 - * Aruba Central Feature Matrix: SD-WAN functionality requires the Advanced license tier, not a separate "security license."

NEW QUESTION # 33

.....

By updating the study system of the HPE7-A03 study materials, we can guarantee that our company can provide the newest information about the exam for all people. We believe that getting the newest information about the exam will help all customers pass the HPE7-A03 Exam easily. If you purchase our study materials, you will have the opportunity to get the newest information about the HPE7-A03 exam. More importantly, the updating system of our company is free for all customers.
