ISC CCSP Certification Exam is a valuable credential for professionals in the cloud security field. It demonstrates a high level of expertise and knowledge in securing cloud environments and is recognized globally by industry organizations and government agencies. With the increasing adoption of cloud computing, this certification is becoming more important for professionals who want to stay relevant and competitive in the industry.

## ISC Certified Cloud Security Professional Sample Questions (Q29-Q34):

### NEW QUESTION # 29

An SLA contains the official requirements for contract performance and satisfaction between the cloud provider and cloud customer. Which of the following would NOT be a component with measurable metrics and requirements as part of an SLA?

- A. Network
- B. CPU
- C. **Users**
- D. Memory

**Answer: C**

Explanation:

Dealing with users or user access would not be an appropriate item for inclusion in an SLA specifically.

However, user access and user experience would be covered indirectly through other metrics.

Memory, CPU, and network resources are all typically included within an SLA for availability and response times when dealing with any incidents.

### NEW QUESTION # 30

Which of the following would NOT be a reason to activate a BCDR strategy?

- A. Natural disaster
- B. Utility disruptions
- C. Staffing loss
- D. Terrorism attack

**Answer: C**

Explanation:

Explanation

The loss of staffing would not be a reason to declare a BCDR situation because it does not impact production operations or equipment, and the same staff would be needed for a BCDR situation.

### NEW QUESTION # 31

Which of the following is not one of the types of controls?

Response:

- A. Technical
- B. Administrative
- C. Physical
- D. Transitional

**Answer: D**

### NEW QUESTION # 32

Which of the following is NOT a core component of an SIEM solution?

- A. Aggregation
- B. Correlation
- C. Escalation
- D. Compliance

**Answer: C**

### NEW QUESTION # 33

Which component of ITIL involves the creation of an RFC ticket and obtaining official approvals for it?

- A. Problem management
- B. Deployment management
- C. Release management
- D. Change management

**Answer: D**

Explanation:

The change management process involves the creation of the official Request for Change (RFC) ticket, which is used to document the change, obtain the required approvals from management and stakeholders, and track the change to completion. Release management is a subcomponent of change management, where the actual code or configuration change is put into place.

Deployment management is similar to release management, but it's where changes are actually implemented on systems. Problem management is focused on the identification and mitigation of known problems and deficiencies before they are able to occur.

## NEW QUESTION # 34
