How Can ValidVCE InsuranceSuite-Analyst Practice Questions be Helpful in Exam Preparation?

We always lay great emphasis on the quality of our InsuranceSuite-Analyst study materials. Never have we been complained by our customers in the past ten years. The manufacture of our InsuranceSuite-Analyst study materials is completely according with strict standard. We do not tolerate any small mistake. We have researched an intelligent system to help testing errors of the InsuranceSuite-Analyst Study Materials. The PDF version, online engine and windows software of the InsuranceSuite-Analyst study materials will be tested for many times.

Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q60-Q65):

NEW QUESTION # 60
Please select User Story Card best practices from the list below. (Choose two)

- A. Review every requirement with the team
- B. Include field requirements in the UI Mock-up tab
- C. Change a requirement number after the story card has been published
- D. Include a requirement number for traceability

Answer: A,D

Explanation:
Guidewire SurePath emphasizesconsistency, clarity, and traceabilitywhen documenting User Story Cards.
Two key best practices that support these principles areincluding requirement numbers for traceabilityand reviewing every requirement with the team, makingOptions C and Dcorrect.
Including arequirement number(Option C) is a critical best practice because it enablesend-to-end traceability. Requirement numbers allow analysts to link business requirements to user stories, acceptance criteria, test cases, defects, and final delivery. This is especially important in regulated insurance environments and large Guidewire programs where scope control and auditability are essential.
Reviewingevery requirement with the team(Option D) ensures shared understanding across Business Analysts, Developers, and Quality Analysts. These reviews help identify gaps, assumptions, and ambiguities early, reducing rework and defects later in the project. This collaborative approach aligns with Agile and Guidewire's emphasis on early validation.
The remaining options are not best practices. Field-level requirements should be documented in requirement or rules sections, not embedded in UI mockup tabs (Option A). Changing requirement numbers after publication (Option B) breaks traceability and creates confusion across dependent artifacts.

NEW QUESTION # 61
Each Guidewire product has a set of _____ that identify common processes within the product.

- A. Application Guides (User Guides)
- B. Backlog priorities
- C. Themes
- D. Configuration Guide

Answer: C

Explanation:
Guidewire InsuranceSuite products are designed around a consistent set ofbusiness process patternsthat help analysts and implementation teams understand how functionality is organized and delivered. These common process patterns are identified throughthemes, makingOption Dthe correct answer.
Themesrepresent high-level groupings of related functionality within a Guidewire product. Examples include policy lifecycle management, claims handling, billing operations, and customer account management. Themes help analysts quickly understand how business processes map to Guidewire capabilities and provide a structured way to explore product functionality during elaboration and requirement definition.
Themes are particularly important during early project phases, such as Inception and Elaboration, because they provide aframework for organizing requirementsand discussions. By anchoring conversations around themes, analysts can ensure coverage of end-to-end processes and avoid missing critical functionality.
The other options do not serve this purpose. Application Guides (Option A) and Configuration Guides (Option C) are documentation artifacts, not mechanisms for identifying common processes. Backlog priorities (Option B) relate to Agile planning and do not describe product structure.
Understanding themes enables analysts to speak a common language with stakeholders and technical teams, ensuring that requirements align with Guidewire's product design and intended usage.

NEW QUESTION # 62

Which areas of the UI provide context-sensitive navigation links to the account functionality of PolicyCenter and the various pages of the account file?

- A. Screen Area
- B. Sidebar
- C. Tab Bar
- D. Workspace
- E. Info Bar
- F. QuickJump Box

Answer: B,C

Explanation:

Comprehensive and Detailed Explanation (250-300 words):

In Guidewire PolicyCenter, navigation is designed to provide both high-level access and context-sensitive navigation within a selected business object such as an account.

The Tab Bar (Option D) provides high-level navigation across major functional areas of the application, including Accounts, Policies, Claims, and Administration. It allows users to quickly access the account search and account-related workflows.

Once an account is opened, the Sidebar (Option F) becomes the primary context-sensitive navigation area. It displays links to specific pages within the account file, such as Account Summary, Contacts, Policies, and Activities. The sidebar updates dynamically based on the selected object, making it essential for navigating within the account context.

The remaining options do not provide context-sensitive account navigation. The Info Bar summarizes context, the QuickJump Box supports navigation shortcuts, the Workspace shows supplementary information, and the Screen Area displays page details.

NEW QUESTION # 63

According to the training, what are the common activities of a Quality Analyst? choose three

- A. Assist in defining concrete examples of system behaviors when using BDD
- B. Provides impact analysis of downstream systems
- C. Validate that features are developed per requirements
- D. Resolves defects
- E. Executes Unit Testing
- F. Confirms if an issue is a defect

Answer: A,C,F

Explanation:

Comprehensive and Detailed Explanation:

In a Guidewire project, the Quality Analyst (QA) plays a proactive role that extends beyond simple execution of test scripts. Their three primary activities from the list are:

* Validate that features are developed per requirements (Option B):This is the core responsibility of the QA-executing Functional Testing and User Acceptance Testing (UAT) support to ensure the delivered software matches the acceptance criteria defined in the User Story.

* Assist in defining concrete examples of system behaviors when using BDD (Option C):Guidewire promotes Behavior-Driven Development (BDD). QAs participate in "Story Huddles" (Three Amigos sessions) to help translate abstract business requirements into concrete "Given-When-Then" scenarios (Gherkin). These examples become the basis for automated tests.

* Confirms if an issue is a defect (Option E):This refers to the Defect Triage process. When a behavior is flagged (by a user or automated test), the QA analyzes it to determine if it is a genuine system failure (Defect) or a misunderstanding of the requirement (Not a Defect) before passing it to a developer.

Why other options are incorrect:

* A. Resolves defects:This is a Developer activity. QAs identify defects; Developers resolve (fix) them.

* F. Executes Unit Testing:This is a Developer activity (typically using GUnit) performed before the code is even released to the QA environment.

* D. Provides impact analysis of downstream systems:This is typically a Business Analyst or Integration Architect activity performed during the elaboration/design phase to understand how a change affects external systems.

NEW QUESTION # 64

According to the training, what are the common activities of a Business Analyst? (Choose two)

- A. Represents the voice of the customer
- B. Always focused on demonstrating value for end users
- C. Responsible for signing off on user stories and defects
- D. Develops test scenarios for each happy path
- E. Defines functional requirements and workflows

Answer: A,E

Explanation:

In Guidewire InsuranceSuite projects, theBusiness Analyst (BA)plays a central role in ensuring that the solution delivers business value while remaining aligned with Guidewire best practices. The two most common and core activities of a Business Analyst arerepresenting the voice of the customeranddefining functional requirements and workflows, makingOptions D and Ecorrect.

The Business Analystrepresents the voice of the customer(Option D) by understanding business goals, operational needs, regulatory constraints, and user expectations. The BA ensures these perspectives are accurately reflected in user stories, acceptance criteria, and process designs. This role is critical in bridging the gap between business stakeholders and technical teams.

Business Analysts alsodefine functional requirements and workflows(Option E). This includes documenting future-state business processes, identifying system behaviors, defining business rules, and clarifying how Guidewire InsuranceSuite should support end-to-end scenarios. These requirements guide developers and testers without prescribing technical implementation details.

The remaining options are not primary BA responsibilities. Signing off on stories and defects (Option A) is typically the responsibility of the Product Owner or business sponsor. Developing detailed test scenarios (Option C) is primarily a Quality Analyst activity. While demonstrating value is important, Option B is too broad and aspirational to define a concrete BA activity.

Understanding these responsibilities helps ensure effective collaboration and successful delivery in Guidewire projects.
