More importantly, if you purchase our Chrome-Enterprise-Administrator practice materials, we believe that your life will get better and better.

Google Chrome-Enterprise-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Analyze Chrome Data: This section of the exam measures skills of a Chrome Data Analyst and focuses on using the Google Admin console to view, analyze, and troubleshoot browser data. It includes reviewing reports, diagnosing browser or update issues, investigating performance problems, and identifying security risks based on log events and Chrome activity.
Topic 2	<ul style="list-style-type: none">• Manage Chrome Enterprise in the Cloud: This section of the exam measures skills of a Cloud Systems Administrator and focuses on preparing and configuring environments for Chrome cloud management. Candidates must demonstrate how to verify domains, use admin roles, configure organizational structures, deploy enrollment tokens, enable reporting, and maintain Chrome using the Google Admin console.
Topic 3	<ul style="list-style-type: none">• Chrome Enterprise Management Fundamentals: This section of the exam measures skills of a Chrome Device Administrator and covers the foundational elements of managing Chrome in an enterprise. It includes understanding how policies are applied and resolved, differentiating managed browsers from profiles, and describing how policies work. It also covers Chrome's built-in security features, how extensions are used and deployed, and how the release cycle and channels are managed.
Topic 4	<ul style="list-style-type: none">• Chrome Updates: This section of the exam measures skills of a Chrome IT Policy Analyst and addresses the various update methods available for Chrome. It includes selecting the right update strategy for different business and security needs, managing compliance across platforms, and adapting update methods based on environmental changes or risks.
Topic 5	<ul style="list-style-type: none">• Chrome Extensions: This section of the exam measures skills of an Endpoint Security Manager and involves managing Chrome extension policies. It includes designing extension management strategies, handling extension exemptions, creating approval workflows, and assessing extensions for their risk and compliance with business continuity requirements.

Chrome-Enterprise-Administrator Exam Cram Review - Exam Chrome-Enterprise-Administrator Overviews

As you may see the data on the website, our sales volumes of our Chrome-Enterprise-Administrator exam questions are the highest in the market. You can browse our official websites to check our sales volumes. At the same time, many people pass the exam for the first time under the guidance of our Chrome-Enterprise-Administrator Practice Exam. And there is no exaggeration that our pass rate for our Chrome-Enterprise-Administrator study guide is 98% to 100% which is proved and tested by our loyal customers.

Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q32-Q37):

NEW QUESTION # 32

A user reports having frequent issues accessing corporate pages and logging into corporate applications. After looking into user reports, it is determined that other users have reported similar issues over the past few months. While the broader investigation is launched to identify and resolve the root cause, which Google Admin remote actions for managed Chrome browsers can be used to help alleviate such issues for the user?

- A. Clear Cookies; Restart Browser; Logout User
- **B. Clear Cache; Clear Cookies; Clear Cache and Cookies**
- C. Clear Cache; Delete Temporary Files; Delete Swap File
- D. Clear Cache and Cookies; Delete Temporary Files; Restart User Session

Answer: B

Explanation:

Clearing the browser's cache and cookies is a common first-line troubleshooting step for issues related to website access and login problems. Outdated or corrupted cached data and cookies can often interfere with website functionality and authentication processes. The Google Admin console provides remote actions to "Clear Cache," "Clear Cookies," or both. Options B, C, and D include actions that are either more disruptive (restart browser, logout user, restart user session) or not standard remote actions available for managed Chrome browsers through the Admin console (delete temporary files, delete swap file).

NEW QUESTION # 33

An organization is migrating its management from Group Policy to Chrome Enterprise Core. When enrolling the browser into Chrome Enterprise Core, what will happen to conflicting policies on Windows when using the default order of precedence?

- A. OS User policies will be ignored in favor of the Cloud User policies
- B. Cloud Machine policies will be ignored in favor of the Machine Policy
- C. Machine Policy will be ignored if the token was deployed through Group Policy
- **D. Machine Policies will be ignored in favor of cloud machine policy**

Answer: D

Explanation:

By default, when a Chrome browser on a Windows device is enrolled in Chrome Enterprise Core, cloud-based machine policies will take precedence over locally configured machine policies (Group Policy). This ensures that the centrally managed cloud policies are enforced.

NEW QUESTION # 34

Chrome Browser Cloud Management has been successfully implemented at a company for the past year.

Recently, the engineering team has received feedback from the security team that Chrome browsers are not meeting patching Service Level Agreements (SLAs). In the Insight report, the engineering team sees that 30% of their companies' browsers are pending updates.

Which browser policy could the engineering team implement to ensure better compliance with the security team's patching requirement?

- A. Google updater policy precedence
- B. Relaunch notification
- C. Chrome browser updates
- **D. Auto-update check period**

Answer: D

Explanation:

To ensure timely patching, the engineering team should adjust the "Auto-update check period" policy. By shortening this period, Chrome browsers will check for updates more frequently, increasing the likelihood of applying security patches sooner and improving compliance with patching SLAs. "Chrome browser updates" is a general category, "Relaunch notification" affects when

users are prompted to restart, and "Google updater policy precedence" deals with the order of policy application, not the frequency of checks.

NEW QUESTION # 35

To reduce risk, an organization is required to maintain a minimum Chrome browser version. The organization allows updates but finds that not all browsers are within one major version of the stable release.

Which policy option would help an admin enforce Chrome browser updates to the latest major stable version via automatic updates?

- A. Component updates
- B. Relaunch notification
- C. Rollback to target version
- D. Auto-update check period

Answer: D

Explanation:

While not directly stating "enforce to the latest major stable version," the "Auto-update check period" policy, when configured appropriately (shorter intervals), ensures that devices check for and apply updates more frequently. This increases the likelihood of browsers reaching and staying closer to the latest stable version over time. "Rollback to target version" is for reverting updates, "Component updates" manages specific browser components, and "Relaunch notification" prompts users to restart after an update.

NEW QUESTION # 36

A company is reviewing the permissions of extensions that are popular among employees. The security team wants to make sure all extensions in the environment have these capabilities disabled:

* Modify to internal home page: `internal.acme.com`

* Access to the storage

* Access to history

Which actions should be taken in the company default extension Permissions and URLs fields to meet the security team's requirements?

- A. Add `internal.acme.com` to runtime blocked hosts; Enable storage permission; Enable history permission
- B. Add `*.acme.com` to runtime blocked hosts; Disable storage permission; Disable history permission
- C. Add `*.acme.com` to runtime blocked hosts; Enable storage permission; Enable history permission
- D. Add `internal.acme.com` to runtime blocked hosts; Disable storage permission; Disable history permission

Answer: B

Explanation:

To prevent extensions from modifying the internal homepage, the administrator should add `*.acme.com` to the "Runtime blocked hosts" list. The wildcard `*` ensures that any attempt to access or modify this domain by an extension will be blocked at runtime. Additionally, to disable access to storage and history, the administrator needs to explicitly disable the "Storage" and "History" permissions within the extension management settings. Therefore, the correct combination is to block the host and disable the permissions.
