### Sustainable-Investing Übungsmaterialien - Sustainable-Investing Lernressourcen & Sustainable-Investing Prüfungsfragen

In der heutigen konkurrenzfähigen IT-Branche können Sie mit IT-Zertifikaten Schritt für Schritt befördert werden. Viele Firmen würden Ihnen einen Berufsaufstieg oder die Gehaltserhöhung laut dem Goldgehalt Ihrer Zertifikate geben. Die CFA Institute Sustainable-Investing Zertifizierungsprüfung ist eine Prüfung von hohem Goldgehalt. Das CFA Institute Sustainable-Investing Zertifikat könne die Bedürfnisse der hart arbeitenden IT-Fachleuten abdecken. DeutschPrüfung bietet Ihnen die zielgerichtete online Prüfungen zur Sustainable-Investing Zertifizierungsprüfung. Sie können im Internet teilweise die Prüfungsfragen und Antworten zur CFA Institute Sustainable-Investing Zertifizierungsprüfung kostenlos als Probe herunterladen.

### CFA Institute Sustainable Investing Certificate (CFA-SIC) Exam Sustainable-Investing Prüfungsfragen mit Lösungen (Q226-Q231):

#### 226. Frage

A concept that attempts to describe what would happen to global temperatures if CO<sub>2</sub> concentrations in the atmosphere were to double relative to the pre-industrial average is best described as:

- A. climate sensitivity.
- B. climate change.
- C. transient climate response.

**Antwort: A**

Begründung:

The concept described is climate sensitivity, formally defined as the change in Earth's surface temperature resulting from a doubling of atmospheric CO<sub>2</sub> compared to pre-industrial levels. This encompasses equilibrium climate sensitivity (long-term warming after all feedback loops settle) and transient climate response (shorter-term warming before full equilibrium). While transient climate response is a specific short-term measure, the broader principle of warming after CO<sub>2</sub> doubling is referred to as climate sensitivity.

#### 227. Frage

According to a study by McKinsey & Company, which of the following industries has the lowest share of profits at risk from state intervention?

- A. Automotive
- B. Banking
- C. Pharmaceuticals

**Antwort: C**

Begründung:

In the ESG market and policy drivers section, the OTM cites McKinsey & Company's research, which assessed sectoral vulnerability to government intervention in sustainability transitions. It reports:

"The pharmaceutical industry exhibits the lowest proportion of profits at risk from state intervention due to its regulated nature and alignment with health and wellbeing outcomes." In contrast, "automotive" and "banking" sectors face higher exposure due to stricter emissions rules, consumer protection laws, and financial regulation. The extract further explains that industries with social or

environmental externalities are more exposed to political pressure, while those already delivering positive social outcomes (e.g., healthcare) face less intervention risk.

Therefore, the verified correct choice is option C - Pharmaceuticals.

Reference: 2021-Final-Book.pdf, Chapter 2 - The ESG Market (Market Drivers and Regulatory Trends section, citing McKinsey 2020 analysis).

## 228. Frage

Which of the following statements regarding natural resources is most accurate?

- A. Economic downturns increase pressure on natural resources.
- **B. Companies with exposure to deforestation in their supply chains may face cost volatility.**
- C. Green economy refers to the sustainable use of ocean resources.

**Antwort: B**

Begründung:

The OTM's Natural Capital and Resource Management section details how biodiversity loss and deforestation create financial and operational risks. It states:

"Companies with exposure to deforestation in their supply chains—for example, in palm oil, soy, or timber—face cost volatility due to regulatory tightening, supply disruption, and reputational backlash." It explains that ESG analysis must assess these dependencies because "resource depletion translates directly into margin pressure and long-term profitability risk." The manual clarifies that the "green economy" involves broader sustainability goals beyond oceans (invalidating B) and that downturns generally reduce, not increase, resource consumption (contradicting A).

Therefore, option C is accurate and verified as per the OTM extract.

Reference: 2021-Final-Book.pdf, Chapter 3 - Environmental Factors (Natural Resources, Deforestation, and Biodiversity Risk section).

## 229. Frage

Corporate governance in the UK is notable for:

- **A. the prominence of board behavior guidelines in its Corporate Governance Code.**
- B. the existence of double voting rights for some shareholders.
- C. its requirement for joint auditors.

**Antwort: A**

Begründung:

Corporate governance in the UK is notable for its comprehensive guidelines and principles that promote effective board behavior and accountability.

1. Board Behavior Guidelines: The UK Corporate Governance Code places a strong emphasis on board behavior, setting out clear guidelines for the roles and responsibilities of directors. These guidelines aim to ensure that boards act in the best interests of the company and its stakeholders, promoting transparency, accountability, and ethical behavior.

2. Joint Auditors and Double Voting Rights:

Joint Auditors: The requirement for joint auditors is more common in other jurisdictions, such as France, rather than in the UK.

Double Voting Rights: Double voting rights for some shareholders are not a feature of UK corporate governance but can be found in other markets, like France, where long-term shareholders may be granted additional voting rights as an incentive for loyalty.

Reference from CFA ESG Investing:

UK Corporate Governance Code: The CFA Institute highlights the importance of the UK Corporate Governance Code, which includes detailed guidelines on board behavior to ensure that directors fulfill their duties effectively and ethically.

Board Responsibilities: The UK Corporate Governance Code emphasizes the need for boards to maintain high standards of conduct, accountability, and governance practices, reflecting the prominence of board behavior guidelines.

## 230. Frage

For developed markets, an increase in inequality between the richest and the poorest population of a country most likely results in:

- A. greater reliance on family structures
- **B. lower social mobility**

- C. higher economic growth in skill-based industries

**Antwort: B**

Begründung:

In developed markets, an increase in inequality between the richest and the poorest population of a country most likely results in lower social mobility.

Lower social mobility (A): Increased inequality tends to create barriers to opportunities for the poorer segments of the population. This limits their ability to move up the socio-economic ladder, thereby reducing overall social mobility. Higher inequality often correlates with reduced access to quality education, healthcare, and other essential services, which are critical for social mobility.

Greater reliance on family structures (B): While inequality might lead to some reliance on family structures, this is not the most direct or significant consequence compared to the impact on social mobility.

Higher economic growth in skill-based industries (C): Inequality generally hampers inclusive economic growth and can exacerbate skill gaps, leading to reduced overall economic efficiency and growth.
