CertiProf Certified ISO/IEC 27001:2022 Foundation Sample Questions (Q11-Q16):

NEW QUESTION # 11

A document defining the scope of the Information Security Management System may:

- A. Take into consideration a set of security tools
- **B. Consider the scope and boundaries from an organizational and technological perspective**
- C. Consider processes, technology, and people
- D. All of the above

Answer: B

Explanation:

ISO/IEC 27001:2022 requires the organization to determine the boundaries and applicability of the ISMS in order to establish its scope. When defining the scope, the organization must consider internal and external issues, interested parties, and interfaces and dependencies between activities performed by the organization and those performed by other organizations. The strongest and most accurate answer is B because it directly reflects the concept of scope and boundaries. Options A and C may be related in practice, but they are not the clearest expression of the formal requirement.

NEW QUESTION # 12

How should top management provide evidence of its commitment to the Information Security Management System?

- **A. By communicating the importance of meeting ISMS requirements**
- B. By conducting an annual internal audit of the Information Security Management System
- C. By defining a risk assessment approach
- D. By operating the Information Security Management System once it has been established

Answer: A

Explanation:

One of the explicit leadership responsibilities in ISO/IEC 27001:2022 is for top management to communicate the importance of effective information security management and of conforming to the ISMS requirements. This communication helps demonstrate visible commitment and organizational direction. Conducting internal audits and defining the risk assessment approach are important activities within the ISMS, but they are not the best direct expression of top management's evidence of commitment among the options listed. Therefore, option A is correct.

NEW QUESTION # 13

What does ISO/IEC 27001:2022 require for information security risk treatment?

- A. A person designated by top management with expertise to perform information security risk treatment
- **B. Performing an information security risk treatment process to select appropriate risk treatment options, taking into account the results of the risk assessment**
- C. Acquiring a set of information security tools to automate risk treatment
- D. A consultancy to accurately perform information security risk treatment

Answer: B

NEW QUESTION # 14

Within the ISMS, ensuring the integration of information security management system requirements into the organization's processes is a responsibility of:

- **A. Top management**
- B. The quality management representative
- C. The Operations Manager
- D. The IT Security Manager

Answer: A

Explanation:

ISO/IEC 27001:2022 assigns leadership and accountability for the ISMS to top management. One of the specific responsibilities of top management is to ensure that the ISMS requirements are integrated into the organization's processes. This demonstrates that information security is not treated as an isolated activity, but as part of the overall governance and operation of the organization. Therefore, option D is correct.

NEW QUESTION # 15

What does ISO/IEC 27001:2022 require for the control of documented information?

- A. Have an internal auditor validate that documented information control is performed externally
- **B. Control documented information so that it is available and suitable for use, where and when it is needed**
- C. Hire a consultancy to determine how documented information should be controlled in order to achieve certification
- D. Acquire a technological tool to control documented information effectively

Answer: B

Explanation:

ISO/IEC 27001:2022 requires documented information to be controlled so that it is available and suitable for use where and when needed, and adequately protected. The standard does not require purchasing software, hiring consultants, or assigning external validation as mandatory conditions for compliance. Those may be organizational choices, but they are not requirements of the standard. Therefore, option A is the correct answer.

NEW QUESTION # 16

.....

Our world is in the state of constant change and evolving. If you want to keep pace of the time and continually transform and challenge yourself you must attend one kind of I27001F certificate test to improve your practical ability and increase the quantity of your knowledge. Buying our I27001F Study Materials can help you pass the test smoothly. Our I27001F study materials have gone through strict analysis and verification by senior experts and are ready to supplement new resources at any time.
