We have the specialized technicians to maintain the website at times, therefore the safety of website is guaranteed, and if you indeed encounter some problem, just contact with our service stuff, they will help you to solve the problem.

Salesforce Plat-Admn-202 Exam Syllabus Topics:

Topic	Details
Topic 1	• Business Logic and Process Automation: This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.

Topic 2	• App Deployment: This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.
Topic 3	• User Interface: This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.
Topic 4	• Salesforce Fundamentals: This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.
Topic 5	• Data Modeling and Management: This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.

Salesforce Certified Platform App Builder Sample Questions (Q109-Q114):

NEW QUESTION # 109
What are two reason to create an unmanaged package? Choose 2 answers

- A. Distributing open-source projects on the AppExchange.
- B. Deploying from a Developer Edition environment
- C. Publishing an application for sale on the AppExchange
- D. Distributing upgradeable components to another Salesforce org

Answer: A,B

Explanation:
The two reasons to create an unmanaged package are to distribute open-source projects on the AppExchange and to deploy from a Developer Edition environment. An unmanaged package is a collection of components that can be installed in any Salesforce org but cannot be upgraded or controlled by the developer. An unmanaged package can be used to share open-source projects or to deploy components from a Developer Edition environment to another org.

NEW QUESTION # 110
The DreamHouse Realty (DR) service manager has asked for some improvements in case management to enforce process compliance so that cases are unable to be reverted to an earlier case status, and to ensure that certain fields are required when specific case criteria are met.
What solution should an app builder implement to meet these requirements?

- A. Workflow Rules
- B. A Validation Rules

- C. Activities Component
- D. Process Builder

Answer: B

Explanation:
A validation rule can enforce process compliance by preventing users from saving records that do not meet certain criteria. In this case, a validation rule can prevent users from reverting to an earlier case status or leaving certain fields blank when specific case criteria are met

NEW QUESTION # 111
Universal Containers is piloting new features in an existing sandbox and wants to prevent outbound email sends during testing. What should the app builder do to meet the requirement?

- A. Email deliverability set to no access.
- B. Email configured for SMTP authentication.
- C. Email deliverability set to system email only.
- D. Email relay to the configured host enabled.

Answer: A

Explanation:
Setting email deliverability to no access would prevent outbound email sends during testing in a sandbox. This would ensure that no emails are sent to any users or external email addresses from the sandbox. Setting email deliverability to system email only would still allow some emails to be sent, such as password reset emails or new user emails. Configuring SMTP authentication or email relay would not affect email deliverability in a sandbox

NEW QUESTION # 112
An app builder needs to deploy a new account detail page layout from sandbox to production.
Which three components should an app builder include in the Change Set to ensure it deploys successfully and visually as expected? Choose 3 answers

- A. System administrator profile
- B. Custom actions
- C. Lightning App Builder
- D. Custom fields
- E. Detail page layout

Answer: B,D,E

Explanation:
To deploy a new account detail page layout from sandbox to production, an app builder should include three components in the change set:
Detail page layout: The page layout defines the arrangement of fields, buttons, related lists, and other components on a record detail or edit page. It also controls which fields are required or read-only for users. Source Custom fields: Custom fields are fields that are created by users to store additional information on standard or custom objects. Custom fields can have different data types, such as text, number, date, picklist, etc. Source Custom actions: Custom actions are actions that are created by users to extend the functionality of standard or custom objects. Custom actions can be global or object-specific, and they can invoke different tools such as Lightning components, Visualforce pages, flows, etc. [Source]

NEW QUESTION # 113
Universal Containers has Public Read/Write as the Account organization-wide default (OWD) setting. Visitors to the customer community site report that they can see all of the company's account records.
How should an app builder configure Account sharing so that community users only see their own Account?

- A. Define an owner-based sharing rule for external accounts.
- B. Define a permission set for external accounts.
- C. Set the account external OWD to private.

- D. Create an account record type for external accounts.

Answer: C

Explanation:
The best way to configure Account sharing so that community users only see their own Account is to set the account external OWD to private. This will restrict the access to Account records for external users based on the sharing rules and criteria. Creating an account record type, defining an owner-based sharing rule, or defining a permission set will not prevent community users from seeing other accounts.

NEW QUESTION # 114

......

With all this reputation, our company still take customers first, the reason we become successful lies on the professional expert team we possess , who engage themselves in the research and development of our Plat-Admn-202 learning guide for many years. We here promise you that our Plat-Admn-202 certification material is the best in the market, which can definitely exert positive effect on your study. Our Salesforce Certified Platform App Builder learn tool create a kind of relaxing leaning atmosphere that improve the quality as well as the efficiency, on one hand provide conveniences, on the other hand offer great flexibility and mobility for our customers. That's the reason why you should choose us.
