WGU Digital Forensics in Cybersecurity (D431/C840) Course Exam Sample Questions (Q65-Q70):

NEW QUESTION # 65
Which type of information does a Windows SAM file contain?

- A. Hash of network passwords
- B. Hash of local Windows passwords
- C. Encrypted local Windows passwords
- D. Encrypted network passwords

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
The Windows Security Account Manager (SAM) file stores hashed passwords for local Windows user accounts. These hashes are used to authenticate users without storing plaintext passwords.
* The SAM file stores local account password hashes, not network passwords.
* Passwords are hashed (not encrypted) using algorithms like NTLM or LM hashes.
* Network password management occurs elsewhere (e.g., Active Directory).
Reference:NIST SP 800-86 and standard Windows forensics texts explain that the SAM file contains hashed local account credentials critical for forensic investigations involving Windows systems.

NEW QUESTION # 66
The chief information security officer of a company believes that an attacker has infiltrated the company's network and is using steganography to communicate with external sources. A security team is investigating the incident. They are told to start by focusing on the core elements of steganography.
What are the core elements of steganography?

- A. Hash, nonce, salt
- B. File, metadata, header
- C. Encryption, decryption, key
- D. Payload, carrier, channel

Answer: D

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
The core elements of steganography include:
* Payload: the hidden data or message,
* Carrier: the medium (e.g., image, audio file) containing the payload,
* Channel: the method or path used to deliver the carrier with the payload embedded.
* Understanding these elements helps investigators detect and analyze steganographic content.
Reference:NIST SP 800-101 and steganography research identify these core components as fundamental to steganographic communication.

NEW QUESTION # 67
Which tool should be used with sound files, video files, and image files?

- A. StegVideo

- B. Snow
- C. MP3Stego
- D. Stealth Files 4

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
StegVideo is a steganographic tool designed to embed hidden messages within multimedia files such as sound, video, and image files, making it suitable for multi-media steganography.
* Snow is mainly used for text-based steganography.
* MP3Stego is specialized for MP3 audio files only.
* Stealth Files 4 is a general steganography tool but less commonly referenced for multimedia.

NEW QUESTION # 68

How is the Windows swap file, also known as page file, used?

- A. Reserved for system files
- B. Replaces bad sectors
- C. Augments the RAM
- D. Primarily for security

Answer: C

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
The Windows swap file, or page file, is a system file used to extend physical memory by storing data that cannot fit into the RAM. When RAM is full, the OS swaps inactive data pages to this file, thus augmenting RAM capacity.
* It does not replace bad sectors; that function is for disk management utilities.
* It is not primarily for security but for memory management.
* It is not reserved exclusively for system files but is used dynamically for memory paging.
Reference:Microsoft's official documentation and forensic guides like NIST SP 800-86 describe the page file' s role in virtual memory management and its importance in forensic analysis because it may contain fragments of memory and sensitive information.

- A. Autopsy
- B. Forensic Toolkit (FTK)
- C. Device Seizure
- D. Data Doctor

Answer: C

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Device Seizure is a specialized mobile forensic acquisition tool capable of extracting data from locked mobile devices, including older Apple iPhone models such as the iPhone 4. It supports physical and logical acquisition, bypassing certain lock restrictions depending on model and OS version.
* Device Seizure is widely used in law enforcement mobile forensics.
* FTK is primarily a computer forensics suite, not designed for bypassing mobile passcodes.
* Data Doctor does not support advanced mobile device extraction.
Reference:NIST mobile forensics guidelines and approved forensic tool references list Device Seizure as a tool capable of acquiring data from locked mobile devices.
