

1z0-076 Actual Dumps & 1z0-076 Valid Exam Online

What's more, part of that ExamsTorrent 1z0-076 dumps now are free: <https://drive.google.com/open?id=1EdXyafekdSioxltZY78TzNSrVELLBzaA>

The modern Oracle world is changing its dynamics at a fast pace. To stay and compete in this challenging market, you have to learn and enhance your in-demand skills. Fortunately, with the Oracle Database 19c: Data Guard Administration (1z0-076) certification exam you can do this job nicely and quickly. To do this you just need to enroll in the Oracle 1z0-076 Certification Exam and put all your efforts to pass the Oracle Database 19c: Data Guard Administration (1z0-076) certification exam.

Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Topic 2	<ul style="list-style-type: none">Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Topic 3	<ul style="list-style-type: none">Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Topic 4	<ul style="list-style-type: none">Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.
Topic 5	<ul style="list-style-type: none">Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.
Topic 6	<ul style="list-style-type: none">Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.
Topic 7	<ul style="list-style-type: none">Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.
Topic 9	<ul style="list-style-type: none">Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.

Oracle 1z0-076 the latest exam questions and answers free download

There are three versions of Oracle Database 19c: Data Guard Administration test torrent—PDF, software on pc, and app online, the most distinctive of which is that you can install 1z0-076 test answers on your computer to simulate the real exam environment, without limiting the number of computers installed. Through a large number of simulation tests, you can rationally arrange your own 1z0-076 exam time, adjust your mentality in the examination room, find your own weak points and carry out targeted exercises. But I am so sorry to say that 1z0-076 Test Answers can only run on Windows operating systems and our engineers are stepping up to improve this. In fact, many people only spent 20-30 hours practicing our 1z0-076 guide torrent and passed the exam. This sounds incredible, but we did, helping them save a lot of time.

Oracle Database 19c: Data Guard Administration Sample Questions (Q47-Q52):

NEW QUESTION # 47

Which THREE steps are prerequisites for the creation of a physical standby database on a separate server using the RMAN active database duplication method?

- A. Set the DB_UNIQUE_NAME parameter on the primary database to a different value than that of the DB_NAME name parameter.
- B. startup nomount the standby database instance.
- C. Put the primary database into archivelog mode.
- D. Establish user equivalence for the database software owner between the primary host and standby host.
- E. Configure Oracle Net connectivity on the primary host to the standby database instance.

Answer: B,D,E

Explanation:

Creating a physical standby database using RMAN active database duplication requires certain prerequisites to ensure a successful and seamless operation:

Configure Oracle Net connectivity on the primary host to the standby database instance (A): Proper Oracle Net connectivity between the primary and standby servers is essential for communication and data transfer during the duplication process. Oracle Net services provide the network foundation for Oracle Database, Oracle Net Listener, and Oracle applications.

Establish user equivalence for the database software owner between the primary host and standby host (B): User equivalence ensures that the user who owns the Oracle Database software on the primary server has the same privileges on the standby server. This is crucial for RMAN to perform operations on both servers without encountering permission issues.

Startup nomount the standby database instance (C): The standby database instance needs to be started in the NOMOUNT stage before the duplication can begin. This prepares the environment for creating the control file and restoring the database without mounting it, which is a necessary step in the RMAN duplication process.

Oracle Data Guard Concepts and Administration

NEW QUESTION # 48

You are using Data Guard in conjunction with Global Database Services.

You have a Data Guard Broker configuration called Sales and a GDS pool called Prod.

Which three are true concerning the management of the broker configuration when using GDS?

- A. Adding a database to the Sales configuration with DGMGRL requires that the Sales configuration be disabled first. It must then be enabled after the new database is added to the configuration.
- B. Adding a database to the Sales configuration with DGMGRL automatically adds the database to the Prod Pool.
- C. DGMGRL may be used to add the Sales configuration to the Prod pool in gds.
- D. Performing a role change with DGMGRL automatically notifies GDS which in turn activates the appropriate services.
- E. DGMGRL may be used to add a single database to the Sales configuration even if Sales is a member of the Prod pool.

Answer: C,D,E

Explanation:

In the context of Oracle Data Guard and Global Database Services (GDS):

* DGMGRL may be used to add the Sales configuration to the Prod pool in gds (A): Data Guard Broker's command-line interface DGMGRL can be utilized to manage configurations with GDS, allowing the addition of Data Guard Broker configurations to GDS pools.

* Performing a role change with DGMGRL automatically notifies GDS which in turn activates the appropriate services (B): When a role change is executed using DGMGRL, GDS is automatically notified, and it then activates the services that are appropriate for the new database roles.

* DGMGRL may be used to add a single database to the Sales configuration even if Sales is a member of the Prod pool (C): DGMGRL provides the capability to manage individual databases within a broker configuration, including adding databases to a configuration that is already part of a GDS pool. * Oracle Global Data Services documentation

NEW QUESTION # 49

You are planning to perform block comparison using the dbms comp package:

Which TWO statements are true?

- A. The databases should be at least mounted before block comparison.
- B. You can monitor the progress of an ongoing block comparison operation by querying V\$SESSION_LONGOPS.
- C. It can be used to detect lost writes and inconsistencies between the primary database and the cascaded standbys.
- D. It requires that the DB_LOST_WRITE_protect initialization parameter be enabled.
- E. Logical standby databases can be the target database for the dbms_dbcomp.dbcomp procedure.

Answer: A,B

Explanation:

The DBMS_COMPARISON package, used for comparing and converging data objects within a single database or between databases, requires that the databases involved in the block comparison be at least mounted (A). This allows the procedure to access the data blocks for comparison. Additionally, the progress of long-running operations such as block comparison can be monitored using the dynamic performance view V\$SESSION_LONGOPS (D), which provides information on the operation's progress and estimated completion time.

References: Oracle Database PL/SQL Packages and Types Reference provides comprehensive details on the DBMS_COMPARISON package, including its procedures and how to monitor their progress. Additionally, Oracle Database Reference explains the V\$SESSION_LONGOPS view, which is commonly used for monitoring long operations in the database.

NEW QUESTION # 50

Your Data Guard environment consists of these components and settings:

A primary database supporting an OLTP workload

A remote physical standby database

Real-time query is enabled

The redo transport mode is set to SYNC

The protection mode is set to Maximum Availability

Which two statements are true regarding the DelayMins database property for the standby database?

- A. It allows user errors on the primary to be recovered by using the physical standby database.
- B. It can only be enabled for a configuration in Maximum Performance mode.
- C. It enables you to bypass the default network timeout interval specified for the standby redo transport destination.
- D. It can only be enabled for a configuration in Maximum Availability mode.
- E. It specifies a delay before the primary ships redo to the standby destination having DelayMins set.
- F. It allows logical corruptions on the primary to be recovered by using the physical standby database.

Answer: A,F

NEW QUESTION # 51

Examine this validate command:

```
DGMGRL> VALIDATE DATABASE VERBOSE "<database name>";
```

Which THREE statements are TRUE?

- A. The command performs a comparison of SPFILE entries between the primary database and a specified standby database.
- **B. The command performs network connectivity checks between members of a broker configuration.**
- C. The command uses information available in various Oracle Data Guard views as well as the Automatic Diagnostic Repository.
- **D. The command can be used for a logical standby database.**
- **E. The command performs a comprehensive set of database checks prior to a role change.**

Answer: B,D,E

Explanation:

The command performs a comprehensive set of database checks prior to a role change (A): The VALIDATE DATABASE command in Data Guard Manager (DGMGRL) is designed to perform an exhaustive check of a specified database's readiness for a role change, such as a switchover or failover.

The command performs network connectivity checks between members of a broker configuration (C): One of the checks includes verifying that the necessary network connectivity exists between the databases in a Data Guard Broker configuration.

The command can be used for a logical standby database (D): The VALIDATE DATABASE command is versatile and can be used for both physical and logical standby databases to ensure their readiness for role changes.

NEW QUESTION # 52

.....

Contrary to most of the 1z0-076 exam preparatory material available online, ExamsTorrent's dumps can be obtained on an affordable price yet their quality and benefits beat all similar products of our competitors. They will prove the best alternative of your time and money. What's more, our customers' care is available 24/7 for all visitors on our pages. You can put all your queries and get a quick and efficient response as well as advice of our experts on 1z0-076 Certification tests you want to take. Our professional online staff will attend you on priority.
