* Voice of the Customer (VOC):
* Actively listening to customers and gathering feedback.
* Conducting market research to understand customer requirements.
* Translating customer insights into specific design requirements.
* Quality Function Deployment (QFD):
* Translates customer needs into product and process requirements.
* Helps align design decisions with customer expectations.
* Failure Modes and Effects Analysis (FMEA):
* Evaluates the process to identify potential failure points.
* Calculates the relative impact of different types of failures.
* Factors considered: occurrence rating, detection rating, and severity rating.
* Design of Experiments (DOE):
* Helps identify problems in the process that cause defects in the product or service.
* Systematically explores variables and their interactions.
* Aims to optimize performance and minimize variation.
