What's more, part of that GuideTorrent 1z0-076 dumps now are free: <https://drive.google.com/open?id=1C-d5Ktv7jd4R17DgxNNt5Y6K9AfECpOg>

The 1z0-076 dumps of GuideTorrent include valid Oracle Database 19c: Data Guard Administration (1z0-076) questions PDF and customizable 1z0-076 practice tests. Our 24/7 customer support provides assistance to help 1z0-076 Dumps users solve their technical hitches during their test preparation. The 1z0-076 exam questions of GuideTorrent come with up to 365 days of free updates and a free demo.

Countless 1z0-076 exam candidates have passed their Oracle Database 19c: Data Guard Administration (1z0-076) exam and they all got help from real and updated Oracle 1z0-076 exam questions. You can also be the next successful candidate for the 1z0-076 Certification Exam. Both will give you a real-time 1z0-076 exam preparation environment and you get experience to attempt the 1z0-076 exam preparation experience before the final exam.

## 1z0-076 Valid Exam Test & Real 1z0-076 Exam Dumps

Possessing Oracle certification will be a standard to test IT workers' qualifications. 1z0-076 reliable exam preparation will be a key to a certification. If you want to apply for a senior management position, one certification will be an outstanding advantage. I advise people pass exams and get certifications with 1z0-076 Reliable Exam Preparation as soon as possible so that you will be one step ahead while facing better job opportunities.

## Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.</li></ul>
Topic 6	<ul style="list-style-type: none"><li>Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.</li></ul>
Topic 7	<ul style="list-style-type: none"><li>Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.</li></ul>
Topic 8	<ul style="list-style-type: none"><li>Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.</li></ul>
Topic 10	<ul style="list-style-type: none"><li>Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.</li></ul>

## Oracle Database 19c: Data Guard Administration Sample Questions (Q46-Q51):

### NEW QUESTION # 46

Examine the following parameter settings of the physical standby database:

\* STANDBY\_FILE\_MANAGEMENT= AUTO

\* ENABLED\_PDBS\_ON\_STANDBY=<null>

During which TWO tasks are files automatically created in the physical standby database after structure changes on the primary database?

- A. Adding a data file or creating a tablespace
- B. Creating a PDB from the existing PDB within the same CDB
- C. Renaming a data file in the primary database
- D. Performing transportable tablespaces
- E. Adding or dropping a redo file group

**Answer: A,B**

Explanation:

When STANDBY\_FILE\_MANAGEMENT is set to AUTO, the Oracle Data Guard automatically creates, deletes, and renames files on the standby database to match the changes made on the primary database. The tasks that lead to the automatic creation of files on the standby include:

\* Adding a data file or creating a tablespace (C): When a new tablespace is created or a new data file is added on the primary database, the standby database automatically replicates this action, maintaining structural consistency with the primary database.

\* Creating a PDB from the existing PDB within the same CDB (D): Creating a new Pluggable Database (PDB) within a Multitenant Container Database (CDB) on the primary database triggers an automatic creation of the corresponding PDB within the standby CDB. References:  
\* Oracle Data Guard Concepts and Administration Guide

#### NEW QUESTION # 47

Examine the Data Guard configuration after an accidental switchover to Sheep:

```
DGMGRL> show configuration;
Configuration - Animals
Protection Mode: MaxAvailability
Databases:
sheep - Primary database
dogs - Logical standby database
cats - Physical standby database (disabled)
ORA-16795: the standby database needs to be re-created
Fast-Start Failover: DISABLED
Configuration Status:
SUCCESS
```

Which three statements will be true after a switchover to Dogs?

- A. Dogs will be the primary database.
- B. Sheep will be an enabled logical standby database.
- C. Cats will be an enabled physical standby database.
- D. Cats will be a disabled physical standby database that can be manually enabled.
- E. Sheep will be a disabled logical standby database.

**Answer: A,B,D**

#### NEW QUESTION # 48

You are using Data Guard in conjunction with Global Database Services.

You have a Data Guard Broker configuration called Sales and a GDS pool called Prod.

Which three are true concerning the management of the broker configuration when using GDS?

- A. Adding a database to the Sales configuration with DGMGRL requires that the Sales configuration be disabled first. It must then be enabled after the new database is added to the configuration.
- B. DGMGRL may be used to add the Sales configuration to the Prod pool in gds.
- C. Adding a database to the Sales configuration with DGMGRL automatically adds the database to the Prod Pool.
- D. DGMGRL may be used to add a single database to the Sales configuration even if Sales is a member of the Prod pool.
- E. Performing a role change with DGMGRL automatically notifies GDS which in turn activates the appropriate services.

**Answer: B,D,E**

Explanation:

In the context of Oracle Data Guard and Global Database Services (GDS):

\* DGMGRL may be used to add the Sales configuration to the Prod pool in gds (A): Data Guard Broker's command-line interface DGMGRL can be utilized to manage configurations with GDS, allowing the addition of Data Guard Broker configurations to GDS pools.

\* Performing a role change with DGMGRL automatically notifies GDS which in turn activates the appropriate services (B): When a role change is executed using DGMGRL, GDS is automatically notified, and it then activates the services that are appropriate for the new database roles.

\* DGMGRL may be used to add a single database to the Sales configuration even if Sales is a member of the Prod pool (C): DGMGRL provides the capability to manage individual databases within a broker configuration, including adding databases to a configuration that is already part of a GDS pool. #### NEW QUESTION # 49

Which THREE statements are true..... open in real time query mode, which becomes a new.

- A. User sessions can be retained.
- B. User sessions and Current Buffers are maintained by default.
- C. All current buffers can be retained.
- D. All sessions are disconnected and all
- E. Sessions that have long running queries can be retained.
- F. Sessions that are using database links

**Answer: A,C,D**

Explanation:

When a physical standby database is opened in real-time query mode, which may be referred to as real-time apply when using Active Data Guard, certain operations can disrupt ongoing sessions. However, with features like Application Continuity and the proper configuration of initialization parameters such as STANDBY\_DB\_PRESERVE\_STATES, user sessions and current buffers may be preserved during role transitions such as a switchover or failover. Specifically, the STANDBY\_DB\_PRESERVE\_STATES parameter can be set to preserve none, all, or only user sessions during such transitions. This ensures that in-flight transactions are not lost and that users do not experience disruptions during the role transitions of a physical standby database.

#### NEW QUESTION # 50

Which TWO are benefits of using Transaction Guard in a Data Guard environment?

- A. It provides application continuity by replaying transactions interrupted by a failover or a switchover
- B. It provides application continuity by rolling back uncommitted transactions interrupted by a failover or switchover.
- C. It protects against user errors being replicated to standby databases.
- D. It protects against logical corruptions being replicated to standby databases.
- E. It protects against recoverable errors during a planned or an unplanned outage of a primary database.

**Answer: B,E**

Explanation:

Transaction Guard provides benefits in terms of transaction consistency and recovery in a Data Guard environment:

\* It provides application continuity by rolling back uncommitted transactions interrupted by a failover or switchover (B): Transaction Guard ensures that any uncommitted transactions at the time of an outage are rolled back consistently, thus preserving the integrity of the application's data and state.

\* It protects against recoverable errors during a planned or an unplanned outage of a primary database (D): Transaction Guard offers protection against errors that can occur during outages, allowing applications to resume operations more quickly and reliably after recovery.

#### NEW QUESTION # 51

.....

In order to help customers, who are willing to buy our 1z0-076 test torrent, make good use of time and accumulate the knowledge, Our company have been trying our best to reform and update our Oracle Database 19c: Data Guard Administration exam tool. "Quality First, Credibility First, and Service First" is our company's purpose, we deeply hope our 1z0-076 Study Materials can bring benefits and profits for our customers. So we have been persisting in updating our 1z0-076 test torrent and trying our best to provide customers with the latest study materials.
