

New Associate-Cloud-Engineer Test Preparation - Valid Google Google Associate Cloud Engineer Exam - Associate-Cloud-Engineer Reliable Test Experience

Google Cloud Certified

**Associate
Cloud
Engineer**

P.S. Free 2026 Google Associate-Cloud-Engineer dumps are available on Google Drive shared by GuideTorrent:
https://drive.google.com/open?id=1T1DYkzI_v7zn42Y53GOrqa6aTBk5PYUb

Wrong topic tend to be complex and no regularity, and the Associate-Cloud-Engineer torrent prep can help the users to form a good logical structure of the wrong question, this database to each user in the simulation in the practice of all kinds of wrong topic all induction and collation, and the Google Associate Cloud Engineer Exam study question then to the next step in-depth analysis of the wrong topic, allowing users in which exist in the knowledge module, tell users of our Associate-Cloud-Engineer Exam Question how to make up for their own knowledge loophole, summarizes the method to deal with such questions for, to prevent such mistakes from happening again.

Below are the requirements of Associate Cloud Engineer Exam

There is no prerequisite for Oracle Associate Cloud Engineer certification.

Google Associate-Cloud-Engineer Certification Exam is a valuable certification for individuals who want to demonstrate their expertise in GCP services and technologies. It can help you advance your career in the cloud computing industry and stand out in the competitive job market. With the right preparation and hands-on experience, you can pass the certification exam and become a certified Google Associate Cloud Engineer.

To take the exam, candidates need to have practical experience using GCP services and must understand the basic principles of cloud computing. Associate-Cloud-Engineer Exam consists of multiple-choice and multiple-select questions, and candidates have two hours to complete it. The passing score for the exam is 70%, and the certification is valid for two years.

Download The New Associate-Cloud-Engineer Test Preparation Means that You Have Passed Google Associate Cloud Engineer Exam

The Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) product can be easily accessed just after purchasing it from GuideTorrent. You can receive free Google Dumps updates for up to 1 year after buying material. The 24/7 support system is also available for you, which helps you every time you get stuck somewhere. Many students have studied from the GuideTorrent Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) practice material and rated it positively because they have passed the Associate-Cloud-Engineer certification exam on the first try.

Google Associate Cloud Engineer Exam Sample Questions (Q151-Q156):

NEW QUESTION # 151

You want to configure 10 Compute Engine instances for availability when maintenance occurs. Your requirements state that these

instances should attempt to automatically restart if they crash. Also, the instances should be highly available including during system maintenance. What should you do?

- A. Create an instance template for the instances. Set 'Automatic Restart' to off. Set 'On-host maintenance' to Terminate VM instances. Add the instance template to an instance group.
- B. Create an instance group for the instance. Verify that the 'Advanced creation options' setting for 'do not retry machine creation' is set to off.
- **C. Create an instance template for the instances. Set the 'Automatic Restart' to on. Set the 'On-host maintenance' to Migrate VM instance. Add the instance template to an instance group.**
- D. Create an instance group for the instances. Set the 'Autohealing' health check to healthy (HTTP).

Answer: C

Explanation:

Create an instance template for the instances so VMs have same specs. Set the "'Automatic Restart' to on to VM automatically restarts upon crash. Set the "'On-host maintenance' to Migrate VM instance. This will take care of VM during maintenance window. It will migrate VM instance making it highly available Add the instance template to an instance group so instances can be managed.

* onHostMaintenance: Determines the behavior when a maintenance event occurs that might cause your instance to reboot.

* [Default] MIGRATE, which causes Compute Engine to live migrate an instance when there is a maintenance event.

* TERMINATE, which stops an instance instead of migrating it.

* automaticRestart: Determines the behavior when an instance crashes or is stopped by the system.

* [Default] true, so Compute Engine restarts an instance if the instance crashes or is stopped.

* false, so Compute Engine does not restart an instance if the instance crashes or is stopped.

Enabling automatic restart ensures that compute engine instances are automatically restarted when they crash.

And Enabling Migrate VM Instance enables live migrates i.e. compute instances are migrated during system maintenance and remain running during the migration.

Automatic Restart If your instance is set to terminate when there is a maintenance event, or if your instance crashes because of an underlying hardware issue, you can set up Compute Engine to automatically restart the instance by setting the automaticRestart field to true. This setting does not apply if the instance is taken offline through a user action, such as calling sudo shutdown, or during a zone outage.

Ref: <https://cloud.google.com/compute/docs/instances/setting-instance-scheduling-options#autorestart> Enabling the Migrate VM Instance option migrates your instance away from an infrastructure maintenance event, and your instance remains running during the migration. Your instance might experience a short period of decreased performance, although generally, most instances should not notice any difference. This is ideal for instances that require constant uptime and can tolerate a short period of decreased performance.

Ref: https://cloud.google.com/compute/docs/instances/setting-instance-scheduling-options#live_migrate

NEW QUESTION # 152

An application generates daily reports in a Compute Engine virtual machine (VM). The VM is in the project corp-iot-insights. Your team operates only in the project corp-aggregate-reports and needs a copy of the daily exports in the bucket corp-aggregate-reports-storage. You want to configure access so that the daily reports from the VM are available in the bucket corp-aggregate-reports-storage and use as few steps as possible while following Google-recommended practices. What should you do?

- A. Create a Shared VPC network between both projects. Grant the VM Service Account the role Storage Object Creator on corp-iot-insights.
- B. Move both projects under the same folder.
- **C. Grant the VM Service Account the role Storage Object Creator on corp-aggregate-reports-storage.**
- D. Make corp-aggregate-reports-storage public and create a folder with a pseudo-randomized suffix name. Share the folder with the IoT team.

Answer: C

Explanation:

Predefined roles

The following table describes Identity and Access Management (IAM) roles that are associated with Cloud Storage and lists the permissions that are contained in each role. Unless otherwise noted, these roles can be applied either to entire projects or specific buckets.

Storage Object Creator (roles/storage.objectCreator) Allows users to create objects. Does not give permission to view, delete, or overwrite objects.

<https://cloud.google.com/storage/docs/access-control/iam-roles#standard-roles> Reference:

NEW QUESTION # 153

A retail company has sensors placed in its physical retail stores. The sensors send messages over HTTP when customers interact with in-store product displays. A Solutions Architect needs to implement a system for processing those sensor messages; the results must be available for the Data Analysis team.

Which architecture should be used to meet these requirements?

- A. Create an Amazon EC2 instance to server as the HTTP endpoint and to process the messages. Save the results to Amazon S3 for the Data Analysis team to download.
- **B. Implement an Amazon API Gateway to server as the HTTP endpoint. Have the API Gateway trigger an AWS Lambda function to process the messages, and save the results to an Amazon DynamoDB table.**
- C. Use AWS Direct Connect to connect sensors to DynamoDB so that data can be written directly to a DynamoDB table where it can be accessed by the Data Analysis team.
- D. Use Amazon Route 53 to direct incoming sensor messages to a Lambda function to process the message and save the results to a Amazon DynamoDB table.

Answer: B

NEW QUESTION # 154

You are building a data lake on Google Cloud for your Internet of Things (IoT) application. The IoT application has millions of sensors that are constantly streaming structured and unstructured data to your backend in the cloud. You want to build a highly available and resilient architecture based on Google-recommended practices. What should you do?

- A. Stream data to Dataflow, and use Storage Transfer Service to send data to BigQuery.
- B. Stream data to Pub/Sub, and use Dataflow to send data to Cloud Storage
- **C. Stream data to Pub/Sub, and use Storage Transfer Service to send data to BigQuery.**
- D. Stream data to Dataflow, and use Dataprep by Trifacta to send data to Bigtable.

Answer: C

NEW QUESTION # 155

Your company is moving its entire workload to Compute Engine. Some servers should be accessible through the Internet, and other servers should only be accessible over the internal network. All servers need to be able to talk to each other over specific ports and protocols. The current on-premises network relies on a demilitarized zone (DMZ) for the public servers and a Local Area Network (LAN) for the private servers. You need to design the networking infrastructure on Google Cloud to match these requirements. What should you do?

- **A. 1. Create a VPC with a subnet for the DMZ and another VPC with a subnet for the LAN. 2. Set up firewall rules to open up relevant traffic between the DMZ and the LAN subnets, and another firewall rule to allow public ingress traffic for the DMZ.**
- B. 1. Create a VPC with a subnet for the DMZ and another VPC with a subnet for the LAN. 2. Set up firewall rules to open up relevant traffic between the DMZ and the LAN subnets, and another firewall rule to allow public egress traffic for the DMZ.
- C. 1. Create a single VPC with a subnet for the DMZ and a subnet for the LAN. 2. Set up firewall rules to open up relevant traffic between the DMZ and the LAN subnets, and another firewall rule to allow public ingress traffic for the DMZ.
- D. 1. Create a single VPC with a subnet for the DMZ and a subnet for the LAN. 2. Set up firewall rules to open up relevant traffic between the DMZ and the LAN subnets, and another firewall rule to allow public egress traffic for the DMZ.

Answer: A

NEW QUESTION # 156

.....

In the 21st century, all kinds of examinations are filled with the life of every student or worker. We need to pass some exams to get the corresponding certificates like Associate-Cloud-Engineer certification, so as to get the recognition of enterprises and society. However, passing an Associate-Cloud-Engineer Exam is not easy, and a large number of people fail to pass it every year, as is the case with the Associate-Cloud-Engineer exam. But if you choose to buy our Associate-Cloud-Engineer study materials, you will pass the exam easily.
