Salesforce Revenue Cloud Consultant Accredited Professional Sample Questions (Q72-Q77):

NEW QUESTION # 72

Universal containers has setup a partner type custom field on the CPQ quote object inorder to ensure partners receive discounts.setting the partner type on the quote shouldcause a recalculation because the field is an input to theproduct prices.how can partnertype queue a new calculation for the quote?

- A. Add the partner type field to the calculating fields field set
- B. Include the field in a custom metadata setting
- C. Setup a quote calculator plugin to ensure the custom field triggers calculation
- D. Refresh post install scripts

Answer: A

NEW QUESTION # 73

During user acceptance testing (UAT) a tester submits an incident because the invoice total did not match the expected results. Which 3 types of information should be included in the description of the incident and a quick resolution?

- A. description of new requirements that will help fix the issue
- B. steps to replace issue
- C. Expected results
- D. expected resolution date
- E. quote number order number or invoice number

Answer: B,C,E

Explanation:

During User Acceptance Testing (UAT), when an incident is submitted due to a discrepancy in the invoice total, the following information should be included in the description of the incident for a quick resolution:

B) Quote number, order number, or invoice number: This information is crucial as it helps identify the specific transaction that has caused the issue.

D) Steps to reproduce the issue: Providing a clear and detailed step-by-step process to reproduce the issue is essential. This allows the team to understand the exact scenario under which the issue occurs, making it easier to diagnose and resolve.

E) Expected results: Clearly stating what the expected results should be provides a benchmark against which the actual results can be compared. This helps in understanding the deviation and the impact of the issue.

NEW QUESTION # 74

How can a Revenue Cloud Consultant create a new payment Method for a credit card that will be saved for future Payments?

- A. From the Payment credit cards related list, click the new credit card button.
- B. From the Account, Payment Method related list, then click the new Payment Method Credit Card button.
- C. Enter the credit card details into a new payment Method record Click the Tokenize button
- D. Enter the credit card details into a new payment method record. Salesforce users should use platform encryption for PCI Compliance.

Answer: B

Explanation:

To create a new payment method for a credit card that will be saved for future payments, the Revenue Cloud Consultant should follow these steps:

* Navigate to the account record that needs the new payment method.

* Find the Payment Methods related list, and then click New Payment Method Credit Card. This button opens a form that allows entering the credit card details, such as card number, expiration date, cardholder name, and billing address.

* Optionally, select a payment gateway record to associate the payment method with a specific gateway. If no payment gateway is selected, the default gateway for the org is used.

* Optionally, select the Autopay checkbox to make this payment method the default one for all transactions on this account.

* Click Save. This action creates a new payment method record and also sends a request to the payment gateway to tokenize the credit card information. Tokenization is a process that replaces sensitive data with a unique identifier that can be used for payment processing without exposing the original data.

* Once the payment gateway returns a token, the payment method record is updated with the token value in the Payment Gateway Token field. This token is used to process payments with this payment method in the future.

NEW QUESTION # 75

What is the most Scalable way to set the legal Entity on the Order Product and Order Product Consumption Schedule?

- A. Use a Flow that is triggered when the record is created and run before the record is saved.
- B. Use a Workflow
- C. Use a Quote Calculator Plugin (QCP)
- D. Use a Custom Setting

Answer: A

Explanation:

A Flow is a scalable way to set the legal entity on the order product and order product consumption schedule because it allows you to automate complex business logic without writing code. A Flow can be triggered when a record is created and run before the record is saved, which means that you can assign the legal entity to the order product and order product consumption schedule before they are inserted into the database. This way, you can ensure that the order product and order product consumption schedule have the correct legal entity for the billing, tax, and revenue recognition treatments that are applied to them. A Flow also gives you more flexibility and control over the logic and criteria for setting the legal entity, compared to a workflow or a custom setting. A Quote Calculator Plugin (QCP) is not a scalable way to set the legal entity on the order product and order product consumption schedule because it is a custom code solution that requires development and maintenance. A QCP also runs after the order product and order product consumption schedule are created, which means that you have to update the legal entity after the record is saved, which can cause data validation issues. A workflow or a custom setting are also not scalable ways to set the legal entity on the order product and order product consumption schedule because they have limitations and drawbacks, such as:

- * A workflow can only run after the record is created and saved, which means that you have to update the legal entity after the record is saved, which can cause data validation issues.
- * A workflow can only execute simple logic and actions, such as field updates, email alerts, tasks, and outbound messages. It cannot perform complex logic or actions, such as loops, conditions, variables, or invocations of other processes or services.
- * A custom setting is a type of custom metadata that stores data that can be accessed by formulas, validation rules, flows, Apex, and the SOAP API. However, a custom setting is not a good way to store data that changes frequently or varies by user or profile, such as the legal entity. A custom setting also requires manual configuration and maintenance, which can be error-prone and time-consuming.
