Pass4Test ConfluentのCCAAK試験トレーニング資料というのは一体なんなのでしょうか。ConfluentのCCAAK試験トレーニングソースを提供するサイトがたくさんありますが、Pass4Testは最実用な資料を提供します。Pass4Testには専門的なエリート団体がいます。認証専門家や技術者及び全面的な言語天才がずっと最新のConfluentのCCAAK試験を研究していますから、ConfluentのCCAAK認定試験に受かりたかったら、Pass4Testのサイトをクリックしてください。あなたに成功に近づいて、夢の樂園に一步一步進めさせられます。

Confluent CCAAK 認定試験の出題範囲:

トピック	出題範囲
トピック 1	• Troubleshooting: This section of the exam measures skills of a Kafka Administrator and includes diagnosing common issues in Kafka clusters. It covers problem areas such as performance bottlenecks, message delivery failures, replication issues, and consumer lag, along with techniques to resolve them effectively.
トピック 2	• Deployment Architecture: This section of the exam measures skills of a Kafka Administrator and covers different Kafka deployment topologies. It evaluates understanding of high availability, disaster recovery, multi-data center replication, and the roles of Zookeeper or KRaft in the cluster architecture.
トピック 3	• Kafka Connect: This section of the exam measures skills of a Site Reliability Engineer and addresses the use and management of Kafka Connect for data integration. It includes setting up connectors, managing configurations, and ensuring efficient movement of data between Kafka and external systems.
トピック 4	• Apache Kafka® Cluster Configuration: This section of the exam measures skills of a Kafka Administrator and includes configuring broker properties, tuning for performance, managing topic-level settings, and applying best practices for production-grade environments.

Confluent Certified Administrator for Apache Kafka 認定 CCAAK 試験問題 (Q36-Q41):

質問 # 36

Your organization has a mission-critical Kafka cluster that must be highly available. A Disaster Recovery (DR) cluster has been set up using Replicator, and data is continuously being replicated from source cluster to the DR cluster. However, you notice that the message on offset 1002 on source cluster does not seem to match with offset 1002 on the destination DR cluster. Which statement is correct?

- A. The DR cluster is lagging behind updates; once the DR cluster catches up, the messages will match.
- **B. The offsets for the messages on the source, destination cluster may not match.**
- C. The message on DR cluster got over-written accidentally by another application.
- D. The message was updated on source cluster, but the update did not flow into destination DR cluster and errored.

正解: B

解説:

When using Confluent Replicator (or MirrorMaker), offsets are not preserved between the source and destination Kafka clusters. Messages are replicated based on content, but they are assigned new offsets in the DR (destination) cluster. Therefore, offset 1002 on the source and offset 1002 on the DR cluster likely refer to different messages, which is expected behavior.

質問 # 37

Which property in broker configuration specifies that a broker belongs to a particular rack?
Which property in broker configuration specifies that a broker belongs to a particular rack?

- A. kafka.rack
- B. zookeeper.rack
- C. client.rack
- **D. broker.rack**

正解: D

解説:

The broker.rack property is used in a Kafka broker's configuration to specify the rack or availability zone the broker belongs to. This is important for rack-aware replica placement, allowing Kafka to distribute replicas across different racks for fault tolerance.

質問 # 38

An employee in the reporting department needs assistance because their data feed is slowing down. You start by quickly checking the consumer lag for the clients on the data stream. Which command will allow you to quickly check for lag on the consumers?

- A. bin/kafka-consumer-group-throughput.sh
- **B. bin/kafka-consumer-groups.sh**
- C. bin/kafka-consumer-lag.sh
- D. bin/kafka-reassign-partitions.sh

正解: B

解説:

The kafka-consumer-groups.sh script is used to inspect consumer group details, including consumer lag, which indicates how far behind a consumer is from the latest data in the partition.

The typical usage is bin/kafka-consumer-groups.sh --bootstrap-server <broker> --describe --group <group_id>

質問 # 39

Which option is a valid Kafka Topic cleanup policy? (Choose two.)

- A. delete
- B. cleanup
- C. compact
- D. default

正解: A、C

解説:

The delete policy deletes old log segments when they exceed the retention period or size.

The compact policy retains only the latest record for each key, enabling efficient key-based storage.

質問 # 40

In certain scenarios, it is necessary to weigh the trade-off between latency and throughput. One method to increase throughput is to configure batching of messages.

In addition to batch.size, what other producer property can be used to accomplish this?

- A. compression
- B. sendbufferbytes
- C. delivery.timeout.ms
- D. linger.ms

正解: D

解説:

The linger.ms property sets the maximum time the producer will wait before sending a batch, even if the batch isn't full. By increasing linger.ms, you allow more records to accumulate in the batch.

質問 # 41

.....

Pass4Testが提供したConfluentのCCAAKトレーニング資料を持っていたら、美しい未来を手に入れるということになります。Pass4Testが提供したConfluentのCCAAKトレーニング資料はあなたの成功への礎になれることだけでなく、あなたがIT業種でもっと有効な能力を発揮することも助けられます。このトレーニングはカバー率が高いため、あなたの知識を豊富させる以外、操作レベルを高められます。もしあなたがConfluentのCCAAK「Confluent Certified Administrator for Apache Kafka」試験にどうやって合格することに困っているのなら、心配しないでください。Pass4Testが提供したConfluentのCCAAKトレーニング資料はあなたの問題を解決することができますから。
