We also pass guarantee and money back guarantee if you fail to pass the exam. We will refund your money to your payment account. Online service staff for 220-1101 Exam Braindumps is available, and if you have any questions, you can have a chat with us.

## CompTIA A+ Certification Exam: Core 1 Sample Questions (Q408-Q413):

NEW QUESTION # 408

Which of the following protocols can be used to securely access a remote network to troubleshoot various devices?

- **A. SSH**
- B. RDP
- C. TFTP
- D. FTP

**Answer: A**

Explanation:

Secure Shell (SSH) is a protocol used to securely access and manage devices over a network. It provides a secure channel over an unsecured network in a client-server architecture, enabling technicians to perform troubleshooting and management tasks remotely with encryption to ensure the security of the data transmitted. FTP and TFTP are used for file transfers and do not inherently provide the same level of security or direct device management capabilities. RDP is used for remote desktop connections but is not as universally applicable for various devices as SSH.

#### **NEW QUESTION # 409**

A user reports the following:

1. When accessing large images, PC performance is degraded.
2. When accessing small text files, PC performance is as expected.

Which of the following is the most likely cause of the performance issues?

- **A. HDD fragmentation**
- B. Insufficient power supply
- C. RAID array configuration errors
- D. RAID controller failure

**Answer: A**

Explanation:

The issue described indicates that performance degradation occurs specifically when accessing large images, while small text files do not cause the same problem. This suggests a problem related to handling large files or data throughput.

HDD fragmentation is a common issue that can cause performance problems with large files, as fragmented files take longer to read and write. This issue would not typically affect the performance of small text files in the same way.

#### **NEW QUESTION # 410**

A customer reports that a printer is only printing misaligned images. Which of the following should the technician do to correct the issue?

- **A. Perform a calibration.**
- B. Replace the ink cartridge.
- C. Clean the print heads.
- D. Scan the document.

**Answer: A**

Explanation:

Explanation

Calibration is the process of adjusting the printer settings to ensure that the printed output matches the original document. Calibration can fix issues such as misaligned images, color accuracy, and print quality. References: [Printer Calibration]

#### **NEW QUESTION # 411**

A customer reports that, after a technician replaced a laptop screen, the laptop is only able to connect to a Wi-Fi network it is positioned very close to a wireless access point. Which of the following should the technician verify FIRST?

- A. The internal antennas are connected.
- B. The battery is charging.
- C. The wireless device drivers are the latest version.
- D. The device has the latest OS updates.
- E. Airplane mode is disabled.

**Answer: A**

Explanation:

The internal antennas are the components that allow the laptop to receive and transmit wireless signals. If the internal antennas are not connected properly, the laptop may have a weak or no Wi-Fi signal. The technician should verify that the internal antennas are connected to the wireless card and routed correctly inside the laptop case. The internal antennas may have been disconnected or damaged during the screen replacement. The device having the latest OS updates, the wireless device drivers being the latest version, airplane mode being disabled, and the battery being charging are not related to the issue, as they do not affect the physical connection of the internal antennas. ### NEW QUESTION # 412

A technician is troubleshooting a user's laptop that randomly turns off. The technician disassembles the laptop and notices that various pieces of small sticker paper within the device have changed color from red to blue. Which of the following is the most likely cause of the laptop's issues?

- A. Liquid damage
- B. Swollen battery
- C. Broken screen
- D. Overheating

**Answer: A**

Explanation:

One of the possible causes of a laptop randomly turning off is liquid damage, which can cause short circuits, corrosion, and overheating of the internal components<sup>1</sup>. Liquid damage can be hard to detect, especially if the laptop has been dried or cleaned after the spill<sup>2</sup>. However, one of the indicators of liquid damage is the presence of small sticker paper within the device that changes color from red to blue<sup>3</sup>.

These stickers are called liquid contact indicators (LCIs), and they are designed to show if a device has been exposed to water or other liquids<sup>3</sup>. LCIs are usually red when dry, but they turn blue or purple when wet<sup>3</sup>. LCIs are often placed near the ports, battery, keyboard, and motherboard of laptops and other electronic devices<sup>3</sup>. LCIs can help technicians diagnose liquid damage and determine if the device is covered by warranty or not<sup>3</sup>.

### NEW QUESTION # 413

.....

You can download a free demo of CompTIA exam study material at Actualtests4sure The free demo of 220-1101 exam product will eliminate doubts about our 220-1101 PDF and practice exams.
