Administer, Extend, and Automate Salesforce certification is highly valued in the industry and can open up new career opportunities for professionals looking to advance their Salesforce career.

## Salesforce Administer, Extend, and Automate Salesforce Sample Questions (Q129-Q134):

### NEW QUESTION # 129

A user at Universal Containers wants to load records into a custom object named Location from a .csv file. While using Data Loader, they cannot find the Location object.

What are two reasons this is happening?

Choose 2 answers

- A. The user's profile needs create access to Location.
- B. Data Loader should only be used with standard objects.
- C. The label of Location may have been changed.
- D. Location has a master-detail field to Account.

**Answer: A,C**

Explanation:

Two reasons why the user cannot find the Location object while using Data Loader are:

The label of Location may have been changed. The label of an object is the name that is displayed in the user interface and can be different from the API name that is used by Data Loader and other tools. If the label of Location has been changed to something else, such as Site or Venue, then the user may not be able to find it by searching for Location in Data Loader. The user should check the API name of the object in Object Manager or use the Describe Global operation in Data Loader to see all available objects and their labels.

The user's profile needs create access to Location. The user's profile determines what objects and fields they can access and what actions they can perform on them, such as creating, reading, updating, or deleting records. If the user's profile does not have create access to Location, then they will not be able to load records into that object using Data Loader. The user should check their profile permissions in Setup or ask their administrator to grant them create access to Location.

The other two options are incorrect because:

Data Loader should only be used with standard objects is not a reason because Data Loader can be used with both standard and custom objects, as long as they are accessible and queryable via the API.

Location has a master-detail field to Account is not a reason because having a master-detail field does not prevent an object from being available in Data Loader, as long as it meets the other requirements such as accessibility and queryability.

### NEW QUESTION # 130

Ursa Major Solar customer records have a lot of fields and Lightning components to give users a variety of information and available functions. Recently, users have noted that their pages take a long time to load and it's starting to negatively impact their experience.

What should the administrator do to help diagnose where improvements can be made?

- A. Use the Apex debugger while loading a customer record.
- B. Click Analyze from the Lightning App Builder toolbar.
- C. Review the debug logs from the Developer Console.
- D. Check the debug logs found in the Environment section of Setup.

**Answer: B**

Explanation:

The Analyze feature in the Lightning App Builder toolbar is a tool that helps you optimize the performance of your record pages by providing recommendations and insights on how to improve page load time and user experience. It can help you identify which fields and components are taking the most time to load and suggest ways to reduce their impact. You can also compare your page performance with other pages in your org or with Salesforce best practices. Reference: [https://help.salesforce.com/s/articleView?id=sf.lightning\\_page\\_optimize.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.lightning_page_optimize.htm&type=5)

#### NEW QUESTION # 131

A developer is getting errors for Production deployment. The test deployment in the Full sandbox, which included a local test run, was successful. The Full sandbox was last refreshed 2 weeks ago.

Where should the administrator check to see what was recently changed?

- A. Field History
- B. Salesforce Optimizer
- C. Dev Console
- **D. Setup Audit Trail**

**Answer: D**

#### NEW QUESTION # 132

Northern Trail Outfitters has five delegated administrators and two system administrators. There have been a couple of cases reported that login settings for sales reps have changed.

Where would the administrator find what settings have been changed?

- A. Field history tracking
- **B. Setup audit trail**
- C. Login history
- D. Debug log

**Answer: B**

#### NEW QUESTION # 133

The VP of sales at AW Computing utilizes a Lead report grouped by Country and Lead Source to show where the leads are coming from. The number of leads varies greatly for each Country.

What should the administrator configure on the report to show the Lead Source effectiveness for each country?

- A. The 'Show Unique Count'
- **B. PARENTGROUPVAL Function**
- C. Bucket filters
- D. PREVGROUPVAL function

**Answer: B**

Explanation:

The PARENTGROUPVAL function is a formula function that returns the value of a parent group in a report. It can be used to compare values across different groupings and show relative performance. In this case, the administrator can use this function to show the lead source effectiveness for each country by calculating the percentage of leads from each lead source divided by the total number of leads for each country. Reference: [https://help.salesforce.com/s/articleView?id=sf.reports\\_formulas\\_parentgroupval.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.reports_formulas_parentgroupval.htm&type=5)
