# HCL Software Academy HCLSoftware Certified Associate Administrator Exam - Notes/Domino 12 Sample Questions (Q62-Q67):

## NEW QUESTION # 62

When a user is renamed, which AdminP request must complete to update ACLs across databases?

- A. Update User Certificate
- B. Synchronize Replicas
- C. Rename Person in Domino Directory
- **D. Rename in ACL**

**Answer: D**

## NEW QUESTION # 63

Which field in the Server document enforces encryption of server-to-server communication?

- A. Ports > Net Address
- B. Notes.ini parameters
- **C. Network Encryption setting**
- D. Server Tasks section

**Answer: C**

Explanation:

To protect data as it travels across the network between Domino servers, administrators configure the Network Encryption setting within the Ports tab of the Server document . By enabling this setting for specific network ports (such as TCPIP), the server will automatically encrypt all data transmitted to other servers or Notes clients, ensuring that sensitive information remains secure from unauthorized interception during transit.

## NEW QUESTION # 64

Domino uses Sequence numbers and replication history to determine when a database requires replication.

- A. Document size in bytes
- B. File creation date
- **C. Sequence numbers and replication history**
- D. ACL last modified date

**Answer: C**

Explanation:

Domino replication is an efficient process that only copies modified data. To achieve this, it uses sequence numbers (which track how many times a document has changed) and the replication history (which logs when two specific replicas last successfully synchronized). By comparing these two elements, the replication task can precisely identify which documents are new or modified since the last update, rather than scanning the entire database or relying on simple file dates.

## NEW QUESTION # 65

What is the primary reason for using a hierarchical naming scheme when deploying Domino servers across an organization?

- A. To eliminate the need for DNS resolution
- B. To ensure automatic user registration
- **C. To support scalability and administrative delegation**
- D. To simplify license activation

**Answer: C**

Explanation:

HCL Domino uses hierarchical naming (e.g., CN=User/OU=Sales/O=HCL) to support scalability and administrative delegation. This structure allows large organizations to create unique namespaces for different departments or geographical locations. It also enables the use of different "certifiers" for different branches of the hierarchy, allowing local administrators to manage their own users and servers without affecting the entire domain.

#### NEW QUESTION # 66

What is the main purpose of the Messaging tab in the Domino Administrator Client?

- **A. Monitor mail routing and SMTP diagnostics**
- B. Configure DAOS
- C. Manage server partitions
- D. Create and manage server groups

**Answer: A**

Explanation:

The Messaging tab is the primary tool for mail administrators. It is used to monitor mail routing status, view the contents of the mail box, and perform SMTP diagnostics. It provides a real-time view of mail flow, showing whether the Router task is active and if there are any delivery failures or bottlenecks in the messaging system.
