### Oracle Payroll Cloud 2024 Implementation Professional Sample Questions (Q97-Q102):

#### NEW QUESTION # 97

You have a requirement to control the values of one input value from another input value.

How do you achieve this?

- A. You can achieve this requirement using the independent and dependent value sets on input values.
- B. You cannot achieve this because interdependency on input values is not possible.
- **C. You can achieve using lookups.**
- D. You can achieve this requirement using the table-validated values sets.

**Answer: C**

#### NEW QUESTION # 98

The customer requires that a team of payroll clerks be able to view the output of a task submitted by another user. Which Owner Type should be configured against the task?

- A. User
- **B. Group**
- C. Active Users
- D. All

**Answer: B**

Explanation:

In Oracle Payroll Cloud, the Owner Type for a payroll task determines who can view or manage the task and its output. When a team of payroll clerks needs to view the output of a task submitted by another user, the task should be assigned to a Group (Option A). This allows all members of the defined group (e.g., a payroll clerk team) to access the task output, ensuring collaborative visibility. Option B ("Active Users") is not a valid owner type for this purpose, as it does not specify a team. Option C ("All") would grant access to all users, which exceeds the requirement of limiting visibility to a specific team. Option D ("User") restricts ownership to a single individual, preventing team access. Configuring the task with a Group owner type aligns with Oracle's security and access control framework for payroll tasks.

#### NEW QUESTION # 99

What are three important considerations when you create your batch data to initialize employee balances?

- A. You must use the same date for all batch detail lines.
- **B. You must include all balances for one employee within one batch.**
- C. You must initialize balances before you run any payroll processes.
- D. You must create your batches by Legislative Data Group.

**Answer: B,C,D**

#### NEW QUESTION # 100

You are creating a custom balance that needs to include run results of all elements associated with the regular earnings and

supplemental earnings classifications.

How should you define the balance feeds to meet this requirement?

- A. Create a balance feed for the regular earnings classification and a balance feed for the supplemental earnings classification.
- B. This requirement cannot be met because a balance cannot be fed by elements from more than one element classification.
- C. Create balance feeds for each element belonging to regular earnings and supplemental earnings classifications but ensure the number of feeds does not exceed 250.
- D. Create balance feeds for each element belonging to regular earnings and supplemental earnings classifications.

**Answer: A**

#### NEW QUESTION # 101

Which action should you take in a checklist to enable the process to be automatically re-processed?

- A. Skip
- B. Rollback
- C. Re Process
- D. Mark for Retry

**Answer: D**

Explanation:

Comprehensive and Detailed in Depth Explanation:

In Oracle Payroll Cloud, when a process fails or encounters an error within a payroll flow checklist, the system provides options to manage the errored tasks. The "Mark for Retry" action is specifically designed to flag a task for reprocessing without requiring a full rollback or manual intervention. This action enables the system to automatically attempt to reprocess the task in the next payroll run or when the flow is resubmitted, assuming the underlying issue (e.g., data correction) has been resolved. The "Re Process" option (B) is not a standard action in the checklist context, "Skip" (C) bypasses the task without reprocessing, and "Rollback" (D) reverses the entire process, which is unnecessary if only reprocessing is needed. This functionality is detailed in the Oracle Payroll Cloud documentation under the "Managing Payroll Flow Checklists" section, where it explains how to handle errored tasks efficiently.
