Valid Braindumps VMCE_v12 Files | VMCE_v12 Reliable Test Pattern

Knowledge of the VMCE_v12 real study guide contains are very comprehensive, not only have the function of online learning, also can help the user to leak fill a vacancy, let those who deal with qualification exam users can easily and efficient use of the VMCE_v12 question guide. By visit our website, the user can obtain an experimental demonstration, free after the user experience can choose the most appropriate and most favorite VMCE_v12 Exam Questions download. Users can not only learn new knowledge, can also apply theory into the VMCE_v12 actual problem, so to grasp the opportunity!

Veeam Certified Engineer v12 Sample Questions (Q78-Q83):

NEW QUESTION # 78

A Scale-out Backup Repository with one local extent has been configured as follows.

A daily VMware backup job retention is 31 days, keeping weekly GFS full backups for 14 weeks.

It is Mar, 20. A file from a backup that occurred the week of Jan, 1 must be recovered. Where is the data?

- A. The data is no longer in the Scale-out Backup Repository
- **B. The capacity tier**
- C. The archive tier
- D. The performance tier

Answer: B

Explanation:

Based on the configuration shown in the image, backups older than 21 days are moved to the capacity tier.

Since the VMware backup job retention is set for 31 days and keeps weekly GFS full backups for 14 weeks, the backup from the week of January 1st is older than 21 days but within the 14-week GFS retention policy.

Therefore, as of March 20, the backup data you need to recover would be in the capacity tier, not on the local performance tier,

because it has been offloaded to the object storage configured as the capacity tier to reduce long-term retention costs.

NEW QUESTION # 79

Which of the following scenarios properly applies the 3-2-1 rule to backup jobs?

- A. Use a backup job to back up to a local repository; perform a backup copy job to a repository in another location
- **B. Use a backup job to back up to a local repository; perform a backup copy job to the same repository**
- C. Use a backup job to back up to a Scale-out Backup Repository configured with capacity tier using AWS S3 and enable move mode
- D. Use backup jobs to back up directly to tape; ship the tapes off site

Answer: B

NEW QUESTION # 80

An organization has been backing up their workloads to a Windows 2016 server (REFS). After a competitor was hit by ransomware, the engineer decided to make all backups immutable to secure them. The engineer has built a new hardened repository with XFS as a standalone backup repository.

Which action should the engineer take to migrate the backup files to the new repository?

- **A. Right-click on the Windows repository and select "Evacuate to", then select the new hardened repository.**
- B. Edit the backup job and change the target to the new backup repository.
- C. Right-click on each backup job and use the "Move" backup option to migrate them to the new hardened repository.
- D. Use Quick Migrate to move the backups to the new hardened repository.

Answer: A

Explanation:

The "Evacuate" action will move all existing backup files (and their metadata) from the old ReFS repository to your new XFS-based hardened repo, preserving immutability and retention settings without re-running the jobs.

NEW QUESTION # 81

There is a company-wide mandate to migrate operations off corporate datacenters and over to AWS, Azure, and GCE. The Veeam engineer has backups of VMware, Hyper-V, and Nutanix VMs stored in on-premises repositories. The performance of a test restore was not satisfactory.

Which solution should the engineer deploy?

- A. Caching servers on premises and in the cloud
- B. Helper appliance in the cloud
- **C. Veeam WAN Accelerators on premises and in the cloud**
- D. Upgraded bandwidth to the Internet

Answer: C

Explanation:

To improve the performance of test restores from on-premises repositories to cloud environments (AWS, Azure, and GCE), deploying Veeam WAN Accelerators on premises and in the cloud is recommended. WAN Accelerators optimize data transfer over the network, reducing the amount of data that needs to be transferred and thereby improving restore performance. References: Veeam Backup & Replication User Guide, Veeam WAN Accelerator Guide

NEW QUESTION # 82

Which two environments can Veeam Agents back up? (Choose two.)

- A. iOS
- B. IBM iSeries
- **C. Windows Server**

- D. Ubuntu
- E. FreeBSD

Answer: C,D

Explanation:

Veeam Agents are designed to provide backup solutions for physical and cloud environments. They support various operating systems, including Ubuntu (a Linux-based OS) and Windows Server. These agents ensure that data on servers running these operating systems can be effectively backed up and restored. However, Veeam Agents do not support FreeBSD, IBM iSeries, or iOS as these platforms require different backup solutions or are not typically used in environments where Veeam operates.
