

# 2026 Nutanix NCP-US-6.10: Pass-Sure Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 Latest Exam Pass4sure

P.S. Free 2026 Nutanix NCP-US-6.10 dumps are available on Google Drive shared by PassCollection:  
[https://drive.google.com/open?id=1THxGFh0j\\_\\_juZEOsRaIivcbjAzA07BSi](https://drive.google.com/open?id=1THxGFh0j__juZEOsRaIivcbjAzA07BSi)

The candidates taking the Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 exam can try a free demo and test features of Nutanix NCP-US-6.10 exam questions before purchasing it. PassCollection also provides three months of free updates on Nutanix exam questions if the exam content changes after you have bought the product. The PassCollection gets feedback from learned professionals and makes improvements in the NCP-US-6.10 valid questions so that it can serve the purpose well. So, are you ready to earn a Nutanix Certified Professional - Unified Storage (NCP-US) v6.10, and join a group of certified and skilled professionals? If yes, getting the Nutanix NCP-US-6.10 exam questions by PassCollection is a perfect start to your Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 exam preparation.

With NCP-US-6.10 study engine, you will get rid of the dilemma that you work hard but cannot improve. With our NCP-US-6.10 learning materials, you can spend less time but learn more knowledge than others. NCP-US-6.10 exam questions will help you reach the peak of your career. Just think of that after you get the Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 NCP-US-6.10 Certification, you will have a lot of opportunities of going to bigger and better company and getting higher incomes!

>> NCP-US-6.10 Latest Exam Pass4sure <<

## Pass Guaranteed 2026 Nutanix NCP-US-6.10: Fantastic Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 Latest Exam Pass4sure

Our products boast 3 versions and varied functions. The 3 versions include the PDF version, PC version, APP online version. You can use the version you like and which suits you most to learn our NCP-US-6.10 study materials. The 3 versions support different equipment and using method and boast their own merits and functions. For example, the PC version supports the computers with Windows system and can stimulate the real exam. Our products also boast multiple functions which including the self-learning, self-evaluation, statistics report, timing and stimulation functions. Each function provides their own benefits to help the clients learn the NCP-US-6.10 Study Materials efficiently. For instance, the self-learning and self-evaluation functions can help the clients check their

results of learning the NCP-US-6.10 study materials.

## Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 Sample Questions (Q36-Q41):

### NEW QUESTION # 36

An administrator would like to load balance an SMB share across multiple FSVMs. What feature should the administrator enable to accomplish this?

- A. Multiple Copies
- B. High Availability
- C. Disaster Recovery
- D. Distributed

**Answer: D**

Explanation:

In Nutanix Files, SMB load balancing across multiple File Server VMs (FSVMs) is achieved by enabling the Distributed configuration. When the distributed option is enabled for a share, the file service can actively balance the load across multiple FSVMs, optimizing performance and client access.

The NUSA course states:

"The Distributed option for SMB shares allows load balancing of client connections across multiple FSVMs. This improves performance and ensures more efficient use of resources." The other options (Disaster Recovery, Multiple Copies, High Availability) are related to resilience and data protection but not directly to load balancing of SMB shares.

### NEW QUESTION # 37

Question:

Which two minimum permission roles must a non-admin user have to enable Nutanix Objects? (Choose two.)

- A. Cluster Admin
- B. User Admin
- C. Category Admin
- D. Files Admin

**Answer: A,B**

Explanation:

To enable Nutanix Objects (deploy a new Objects instance and manage bucket creation), a non-admin user must have the following minimum permissions:

Cluster Admin:

- \* Grants full cluster-level privileges, including resource provisioning, configuration, and management.
- \* Required to deploy services like Objects because it interacts with cluster resources directly.

User Admin:

- \* Allows user management and security roles necessary for configuring access to Objects.
- \* Critical when setting up Object Stores and managing authentication.

According to the NUSA course:

"A non-admin user must have at least the Cluster Admin role and the User Admin role to enable and manage Nutanix Objects deployments. Cluster Admin manages resources, and User Admin manages user-level permissions." The other roles:

Files Admin- manages Nutanix Files only.

Category Admin- relates to category/tag management in Prism, not Objects deployment.

Thus, to enable Nutanix Objects, the user needs Cluster Admin and User Admin permissions.

### NEW QUESTION # 38

An administrator is currently troubleshooting a failed Nutanix Objects deployment using LCM and sees the error message shown in the exhibit.

The Objects cluster deployment is experiencing the following symptoms:

- \* The Objects Home UI Page shows the error: unable to pull the docker images
- \* The docker pull is failing on the first image

The administrator determined that MSP cluster deployment has completed successfully looking at `msp_controller.out`.

Which log file should the administrator use to investigate and troubleshoot this issue further?

- A. aoss\_service\_manager.out
- B. cluster\_health.out
- C. 1cm\_metrics\_uploader.out
- D. domain\_manager.out

**Answer: A**

### Explanation:

According to the Nutanix Unified Storage Administration (NUSA) course, in the Troubleshooting Nutanix Objects Deployment section, the `aoss_service_manager.out` log file is explicitly responsible for tracking the status and lifecycle of container services, including pulling Docker images during the deployment of Nutanix Objects.

This log file is where administrators should look for:

- \* Container image pull attempts
- \* Any errors during docker pull actions
- \* Overall container service management actions and errors

The module "Deploying and Troubleshooting Nutanix Objects" from the NUSA course states:

"During deployment of Nutanix Objects, the `aoss_service_manager.out` log file provides detailed status information regarding container image pulls, container lifecycle events, and object service startup procedures.

This log file is essential when troubleshooting deployment failures related to container image downloads." The other log files listed in the question are used for different components:

- \* `domain_manager.out`: Related to domain services and identity management.
- \* `1cm_metrics_uploader.out`: Responsible for uploading metrics, not related to container image pulls.
- \* `cluster_health.out`: Used for overall cluster health, but not specific to container lifecycle events.

### Reference:

## NEW QUESTION # 39

When hardening the network for Nutanix Objects, which is the only network endpoint that should be exposed to users?

- A. OOB
- B. virbr0
- C. S3
- D. eth0

Answer: C

### Explanation:

When hardening the network for Nutanix Objects, the **S3 endpoint** is the only network endpoint that should be exposed to users. Nutanix Objects is an object storage solution that provides an S3-compatible API for accessing and managing objects. The S3 endpoint is the designated interface through which users and applications interact with Nutanix Objects, typically over HTTPS to ensure secure data transfer.

According to the \*\*Nutanix Unified Storage Administration (NUSA)\*\* course, network hardening for Nutanix Objects involves restricting access to only the necessary endpoints to minimize the attack surface.

The S3 endpoint, which operates over port 443 (HTTPS) or port 80 (HTTP, though HTTPS is recommended for security), is the primary entry point for client interactions. Exposing only this endpoint ensures that users can access object storage services while other internal or management interfaces remain protected.

The \*\*Nutanix Certified Professional - Unified Storage (NCP-US)\*\* study guide emphasizes that Nutanix Objects is designed to segregate user-facing traffic from internal system traffic. The S3 endpoint is configured during the deployment of Nutanix Objects and is associated with a virtual IP address (VIP) or DNS name that resolves to the object store. To harden the network, administrators should configure firewalls and network security groups to allow traffic only to the S3 endpoint, blocking access to other interfaces such as management or internal network endpoints.

The other options are not suitable for user exposure:

- \*\*virbr0\*\*: This is a virtual bridge interface typically used for internal virtualization networking (e.g., in KVM-based environments). It is not a user-facing endpoint and should not be exposed, as it is used for internal communication between virtual machines or services.

- \*\*eth0\*\*: This refers to a physical Ethernet interface on a node, which may carry various types of traffic (e.g., storage, management, or VM traffic). Exposing eth0 directly to users would compromise security by allowing access to internal system communications.

- \*\*OOB (Out-of-Band)\*\*: This refers to out-of-band management interfaces, such as IPMI or iLO, used for hardware management. These are strictly for administrative purposes and must remain isolated from user access to prevent unauthorized control of the infrastructure.

The NUSA course documentation specifically notes that "Nutanix Objects network hardening requires exposing only the S3 endpoint to external users, typically through a load-balanced VIP, while ensuring all other interfaces, such as management or internal cluster networks, are isolated." This is achieved by configuring network segmentation, firewalls, and access control lists (ACLs) to restrict traffic to the S3 endpoint.

## NEW QUESTION # 40

An administrator would like to get notified by email of unusual behavior related to permission changes on their corporate file shares. How would the administrator configure File Analytics to receive notifications in a timely fashion?

- A. Create an Alert Policy
- B. **Define Anomaly Rules**
- C. Configure Events Quotas
- D. Set Ransomware Email Recipient

**Answer: B**

Explanation:

To receive email notifications about unusual behavior related to permission changes on corporate file shares, the administrator should define anomaly rules in Nutanix File Analytics. File Analytics is a monitoring and analytics tool for Nutanix Files that provides visibility into file share activities, including permission changes, access patterns, and potential security threats. Anomaly rules allow administrators to detect and be notified of unusual or suspicious activities, such as unexpected permission modifications.

The Nutanix Unified Storage Administration (NUSA) course explains that File Analytics includes an anomaly detection feature that uses machine learning to identify deviations from normal behavior. The course states, "Administrators can define anomaly rules in File Analytics to monitor specific activities, such as permission changes, and configure email notifications for timely alerts." By setting up anomaly rules, the administrator can specify criteria for permission-related events and enable email alerts to be sent when such anomalies are detected.

The Nutanix Certified Professional - Unified Storage (NCP-US) study guide further elaborates that "File Analytics anomaly rules can be customized to track permission changes, excessive file access, or other suspicious activities, with notifications sent via email to ensure timely response." This makes anomaly rules the most appropriate method for addressing the administrator's requirement.

The other options are not suitable:

- \* Create an Alert Policy: Alert policies in Nutanix are typically used for system-level events (e.g., hardware failures or cluster issues) managed through Prism Central, not for file share-specific activities like permission changes.

- \* Configure Events Quotas: Events quotas are used to manage resource limits or thresholds, not to monitor or notify about specific

activities like permission changes.

\* Set Ransomware Email Recipient: This option is specific to ransomware detection in File Analytics, which focuses on identifying file encryption or mass file modifications, not permission changes.

The NUSA course documentation notes that "File Analytics anomaly rules provide granular control over monitoring file share activities, with email notifications ensuring administrators are promptly informed of potential security issues like unauthorized permission changes." References:
