Cybersecurity-Practitioner Latest Exam Duration - Free PDF Quiz Palo Alto Networks Cybersecurity-Practitioner First-grade Valid Vce

Our Cybersecurity-Practitioner test prep is of high quality. The passing rate and the hit rate are both high. The passing rate is about 98%-100%. We can guarantee that you have a very high possibility to pass the exam. The Cybersecurity-Practitioner guide torrent is compiled by the experts and approved by the professionals with rich experiences. The Cybersecurity-Practitioner prep torrent is the products of high quality complied elaborately and gone through strict analysis and summary according to previous exam papers and the popular trend in the industry. The language is simple and easy to be understood. It makes any learners have no learning obstacles and the Cybersecurity-Practitioner Guide Torrent is appropriate whether he or she is the student or the employee, the novice or the personnel with rich experience and do the job for many years.

Palo Alto Networks Cybersecurity-Practitioner Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Security Operations: This domain focuses on security operations including threat hunting, incident response, SIEM and SOAR platforms, Attack Surface Management, and Cortex solutions including XSOAR, Xpanse, and XSIAM.

Topic 2	<ul style="list-style-type: none"> • Cloud Security: This domain covers cloud architectures, security challenges across application security, cloud posture, and runtime security, protection technologies like CSPM and CWPP, Cloud Native Application Protection Platforms, and Cortex Cloud functionality.
Topic 3	<ul style="list-style-type: none"> • Secure Access: This domain examines SASE and SSE architectures, security challenges for data and applications including AI tools, and technologies like Secure Web Gateway, CASB, DLP, Remote Browser Isolation, SD-WAN, and Prisma SASE solutions.
Topic 4	<ul style="list-style-type: none"> • Network Security: This domain addresses network protection through Zero Trust Network Access, firewalls, microsegmentation, and security technologies like IPS, URL filtering, DNS security, VPN, and SSL • TLS decryption, plus OT • IoT concerns, NGFW deployments, Cloud-Delivered Security Services, and Precision AI.

Palo Alto Networks Cybersecurity Practitioner Sample Questions (Q224-Q229):

NEW QUESTION # 224

Under which category does an application that is approved by the IT department, such as Office 365, fall?

- A. unsanctioned
- B. prohibited
- C. tolerated
- D. sanctioned

Answer: D

Explanation:

A sanctioned application is an application that is approved by the IT department and meets the security and compliance requirements of the organization. Sanctioned applications are allowed to access the organization's network and data and are monitored and protected by the IT department. Examples of sanctioned applications are Office 365, Salesforce, and Zoom. Sanctioned applications are different from unsanctioned, prohibited, and tolerated applications, which are not approved by the IT department and may pose security risks to the organization. Unsanctioned applications are applications that are used by the employees without the IT department's knowledge or consent, such as Dropbox, Gmail, or Facebook. Prohibited applications are applications that are explicitly forbidden by the IT department, such as BitTorrent, Tor, or malware. Tolerated applications are applications that are not approved by the IT department, but are not blocked or restricted, such as Skype, Spotify, or YouTube. NEW QUESTION # 225

Which architecture model uses virtual machines (VMs) in a public cloud environment?

- A. Host-based
- B. Serverless
- C. Kubernetes
- D. Docker

Answer: A

Explanation:

A host-based architecture uses virtual machines (VMs) to run workloads on a shared host, commonly found in public cloud environments. Each VM operates independently with its own OS, making this model suitable for traditional and isolated application deployments.

NEW QUESTION # 226

Which NGFW feature is used to provide continuous identification, categorization, and control of known and previously unknown

SaaS applications?

- A. App-ID
- B. Device-ID
- C. User-ID
- D. Content-ID

Answer: A

Explanation:

App-ID™ technology leverages the power of the broad global community to provide continuous identification, categorization, and granular risk-based control of known and previously unknown SaaS applications, ensuring new applications are discovered automatically as they become popular.

NEW QUESTION # 227

Which action must Security Operations take when dealing with a known attack?

- A. Limit the scope of who knows about the incident.
- B. Document, monitor, and track the incident.
- C. Disclose details of the attack in accordance with regulatory standards.
- D. Increase the granularity of the application firewall.

Answer: B

Explanation:

Security Operations (SecOps) is the process of coordinating and aligning security teams and IT teams to improve the security posture of an organization. SecOps involves implementing and maintaining security controls, technologies, policies, and procedures to protect the organization from cyber threats and incidents. When dealing with a known attack, SecOps must take the following action: document, monitor, and track the incident. This action is important because it helps SecOps to:

* Record the details of the attack, such as the source, target, impact, timeline, and response actions.

* Monitor the status and progress of the incident response and recovery efforts, as well as the ongoing threat activity and indicators of compromise.

* Track the performance and effectiveness of the security controls and technologies, as well as the lessons learned and improvement opportunities. Reference:

NEW QUESTION # 228

Which of the Cloud-Delivered Security Services (CDSS) will detect zero-day malware by using inline cloud machine learning (ML) and sandboxing?

- A. Advanced Threat Prevention
- B. IoT security
- C. DNS security
- D. Advanced WildFire

Answer: D

Explanation:

Advanced WildFire is a Cloud-Delivered Security Service (CDSS) that detects zero-day malware using inline cloud machine learning (ML) and sandboxing techniques. It analyzes unknown files in real-time to identify and block new threats before they can cause harm.

NEW QUESTION # 229

.....

This is a wise choice, after using our Cybersecurity-Practitioner training materials, you will realize your dream of a promotion

because you deserve these reports and your efforts will be your best proof. Therefore, when you are ready to review the exam, you can fully trust our products, choose our learning materials. If you don't want to miss out on such a good opportunity, buy it quickly. Thus, users do not have to worry about such trivial issues as typesetting and proofreading, just focus on spending the most practice to use our Cybersecurity-Practitioner Learning Materials. After careful preparation, I believe you will be able to pass the exam
