Helpful Product Features of Splunk SPLK-3002 Desktop Practice Exam Software

Since it is obvious that different people have different preferences, we have prepared three kinds of different versions of our SPLK-3002 practice test, namely, PDF version, Online App version and software version. Last but not least, our customers can accumulate exam experience as well as improving their exam skills in the mock exam. There is no limitation on our software version

of SPLK-3002 practice materials about how many computers our customers used to download it, but it can only be operated under the Windows operation system. I strongly believe that you can find the version you want in multiple choices of our SPLK-3002 practice test.

Splunk IT Service Intelligence Certified Admin Sample Questions (Q59-Q64):

NEW QUESTION # 59

Which of the following is an advantage of using adaptive time thresholds?

- A. Automatically adjust KPI calculation to manage dynamic event data.
- B. **Automatically update thresholds daily to manage dynamic changes to KPI values.**
- C. Automatically adjust correlation search thresholds to adjust sensitivity over time.
- D. Automatically adjust aggregation policy grouping to manage escalating severity.

Answer: B

NEW QUESTION # 60

When changing a service template, which of the following will be added to linked services by default?

- A. Health score.
- B. Entity Rules.
- C. Thresholds.
- D. **New KPIs.**

Answer: D

Explanation:

C) New KPIs. This is true because when you add new KPIs to a service template, they will be automatically added to all the services that are linked to that template. This helps you keep your services consistent and up-to-date with the latest KPI definitions. The other options will not be added to linked services by default because:

A) Thresholds. This is not true because when you change thresholds in a service template, they will not affect the existing thresholds in the linked services. You need to manually apply the threshold changes to each linked service if you want them to inherit the new thresholds from the template.

B) Entity rules. This is not true because when you change entity rules in a service template, they will not affect the existing entity rules in the linked services. You need to manually apply the entity rule changes to each linked service if you want them to inherit the new entity rules from the template.

D) Health score. This is not true because when you change health score settings in a service template, they will not affect the existing health score settings in the linked services. You need to manually apply the health score changes to each linked service if you want them to inherit the new health score settings from the template.

NEW QUESTION # 61

What are valid considerations when designing an ITSI Service? (Choose all that apply.)

- A. Backfill of a KPI should always be selected so historical data points can be used immediately and alerts based on that data can occur.
- B. **Services, entities, and saved searches are stored in the ITSI app, while events created by KPI execution are stored in the itsi_summary index.**
- C. Entities, entity meta-data, and entity rules should be planned carefully to support the service design and configuration.
- D. Service access control requirements for ITSI Team Access should be considered, and appropriate teams provisioned prior to creating the ITSI Service.

Answer: B,C,D

Explanation:

Reference:

A, B, and C are correct answers because service access control requirements for ITSI Team Access should be considered before creating the ITSI Service, as different teams may have different permissions and views of the service data. Entities, entity meta-data, and entity rules should also be planned carefully to support the service design and configuration, as they determine how ITSI maps data sources to services and KPIs. Services, entities, and saved searches are stored in the ITSI app, while events created by KPI

execution are stored in the `itsi_summary` index for faster retrieval and analysis. Reference: ITSI service design best practices, Overview of ITSI indexes

NEW QUESTION # 62

How do you automatically restrict a KPI to only the entities in its service, and generate KPI values for each entity?

- A. Select "No" for "Split by Entity" and "Yes" for "Filter to Entities in Service".
- **B. Select "Yes" for both "Split by Entity" and "Filter to Entities in Service".**
- C. Select "Yes" for "Split by Entity" and "No" for "Filter to Entities in Service".
- D. Select "No" for both "Split by Entity" and "Filter to Entities in Service".

Answer: B

Explanation:

Reference:

A is the correct answer because selecting "Yes" for both "Split by Entity" and "Filter to Entities in Service" allows you to automatically restrict a KPI to only the entities in its service and generate KPI values for each entity. Split by Entity splits the KPI search results by entity alias fields and calculates a separate KPI value for each entity. Filter to Entities in Service filters out any entities that are not part of the service from the KPI search results. This way, you can ensure that your KPI reflects only the relevant entities for your service and provides granular information for each entity. Reference: [Configure KPI settings in ITSI]

NEW QUESTION # 63

How do you automatically restrict a KPI to only the entities in its service, and generate KPI values for each entity?

- A. Select "No" for "Split by Entity" and "Yes" for "Filter to Entities in Service".
- **B. Select "Yes" for both "Split by Entity" and "Filter to Entities in Service".**
- C. Select "Yes" for "Split by Entity" and "No" for "Filter to Entities in Service".
- D. Select "No" for both "Split by Entity" and "Filter to Entities in Service".

Answer: B

Explanation:

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/BaseSearch> A is the correct answer because selecting "Yes" for both "Split by Entity" and "Filter to Entities in Service" allows you to automatically restrict a KPI to only the entities in its service and generate KPI values for each entity. Split by Entity splits the KPI search results by entity alias fields and calculates a separate KPI value for each entity. Filter to Entities in Service filters out any entities that are not part of the service from the KPI search results. This way, you can ensure that your KPI reflects only the relevant entities for your service and provides granular information for each entity. References: [Configure KPI settings in ITSI]

NEW QUESTION # 64

.....

Now is not the time to be afraid to take any more difficult SPLK-3002 certification exams. Our SPLK-3002 learning quiz can relieve you of the issue within limited time. Our website provides excellent SPLK-3002 learning guidance, practical questions and answers, and questions for your choice which are your real strength.
