The PDF version of our GH-100 Test Braindumps provide demo for customers; you will have the right to download the demo for free if you choose to use the PDF version.

Microsoft GH-100 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Manage GitHub Packages: This section of the exam measures skills of GitHub Enterprise Administrators and focuses on managing GitHub Packages, their use in workflows, and how they differ from releases. It involves accessing, writing, and sharing packages across teams while ensuring integration into CI • CD pipelines.
Topic 2	<ul style="list-style-type: none"> • Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication.
Topic 3	<ul style="list-style-type: none"> • Manage access and permissions based on membership: This section of the exam measures skills of DevOps Engineers and reviews how to manage organizations, teams, and repository permissions. It includes default permission settings, team synchronization through AD, scripting across multiple organizations, and aligning enterprise policies with trust requirements. It also contrasts roles such as organization members, owners, collaborators, and billing managers.

torrent to guarantee your success in Microsoft GH-100 test certification. We keep our GH-100 vce torrent the latest by checking the newest information about the updated version every day. Add the latest topics into the GH-100 Dumps, and remove the useless questions, so that your time will be saved and study efficiency will be improved.

Microsoft GitHub Administration Sample Questions (Q34-Q39):

NEW QUESTION # 34

You are using GitHub-hosted runners and need to securely deploy to an internal system. The security team requires that these runners use IP address ranges that would not be shared with other companies. Which of the following approaches would meet their requirements?

- A. GitHub-hosted standard runners, using the IP addresses provided in "actions" from <https://api.github.com/meta>
- B. GitHub-hosted standard runners, using the IP addresses provided in "api" from <https://api.github.com/meta>
- C. GitHub-hosted larger runners with static IP addresses
- D. GitHub-hosted larger runners with Azure private networking

Answer: C

Explanation:

GitHub's larger runners let you reserve dedicated static IP addresses for your workflows - so you can allow-list those IPs in your firewall and be sure they aren't shared with any other tenant.

NEW QUESTION # 35

What will happen if Dependabot discovers a vulnerable transitive dependency in a repository?

- A. It opens a pull request to update the affected package directly, regardless of version compatibility.
- B. It sends an email to the repository owner but does not alter code.
- C. It creates a pull request to update the direct dependency to a version that resolves the vulnerability.
- D. It automatically removes the package from the repository.

Answer: C

Explanation:

Dependabot will automatically open a pull request that updates the direct dependency to a version which, in turn, resolves (or removes) the vulnerable transitive dependency-ensuring the fix is applied via your declared dependencies.

NEW QUESTION # 36

Which of the following accurately contrasts a GitHub App and a GitHub Action?

- A. GitHub Actions are limited to reading repository content only
- B. GitHub Apps can only be used inside `.github/workflows`
- C. GitHub Apps run only on GitHub-provided virtual machines, while GitHub Actions run only on customer-hosted machines
- D. GitHub Actions can only be used to respond to events within a single repository while GitHub Apps can respond to events from multiple repositories

Answer: D

Explanation:

GitHub Actions workflows are defined and triggered within a single repository's context, whereas GitHub Apps are installed at the organization or user level and can subscribe to events across multiple repositories.

NEW QUESTION # 37

You want to ensure a secret is automatically available to only workflows in internal and private repositories in the organization. Where do you configure the required access policy?

- A. Rulesets
- B. Organization secret
- C. Runner groups
