GH-900 Exam Pass4sure & Valid GH-900 Exam Cram

If you have interests with our GH-900 practice materials, we prefer to tell that we have contacted with many former buyers of our GH-900 exam questions and they all talked about the importance of effective GH-900 practice material playing a crucial role in your preparation process. Our GH-900 practice materials keep exam candidates motivated and efficient with useful content based wholly on the real GH-900 guide materials. There are totally three versions of GH-900 practice materials which are the most suitable versions for you: pdf, software and app versions.

Microsoft GH-900 Exam Syllabus Topics:

Topic	Details
Topic 1	• Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.
Topic 2	• Privacy, Security, and Administration: This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members.
Topic 3	• Introduction to Git and GitHub: This section of the exam measures skills of Junior Developers and Platform Support Specialists and covers the basic understanding of Git and GitHub. It explains what Git is and why it is used, the fundamental Git workflow, and concepts related to repositories including their local and remote distinctions. Candidates learn essential Git commands such as initializing and cloning repositories, adding and committing changes, pushing and pulling updates, and branching and merging. It also covers navigating GitHub by creating accounts, managing repositories, understanding its interface, and working with issues and pull requests.
Topic 4	• Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI • CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.
Topic 5	• Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.

Microsoft GitHub Foundations Sample Questions (Q32-Q37):

NEW QUESTION # 32
What qualifier finds issues that mention a certain user?

- A. Smentioned:
- B. mentions:
- C. mentioned:
- D. threads:

Answer: B

Explanation:
The qualifier mentions: is used in GitHub's search functionality to find issues that mention a certain user. For example, if you want to find all issues where a specific user is mentioned, you would use mentions:username. This helps in tracking where a user has been involved in discussions across issues or pull requests.

NEW QUESTION # 33
What best describes Markdown?

- A. Scripting language
- B. Programming language
- C. Version control system
- D. Containerization solution
- E. Markup language

Answer: E

Explanation:
Markdown is a lightweight markup language with plain-text formatting syntax. It is designed to be easy to write and read in its raw form, and it can be converted into HTML and other formats. Markdown is commonly used for formatting readme files, writing messages in online discussion forums, and creating rich text documents.
Markup Language:
Option A is correct because Markdown is indeed a markup language. It is not a programming language, scripting language, version control system, or containerization solution.
Incorrect Options:
Option B is incorrect because Markdown is not a programming language; it does not involve control structures or variables.
Option C is incorrect because Markdown is not used for scripting or automation.
Option D is incorrect because Markdown does not manage version control.
Option E is incorrect because Markdown is not related to containerization technologies like Docker.

NEW QUESTION # 34
Which of the following best describes a Codespace?

- A. A Visual Studio Code plug-in to manage local devcontainers
- B. A lightweight editing experience that runs entirely in your browser
- C. A development environment hosted in the cloud
- D. An AI pair programmer that offers autocomplete-style suggestions

Answer: C

Explanation:
A Codespace is a cloud-hosted development environment provided by GitHub. It allows developers to code in a fully-configured environment that can be accessed from any device with an internet connection. Codespaces integrate with Visual Studio Code, either through the desktop app or directly in the browser, providing a consistent development experience without the need to manually set up a local environment.
Cloud-Hosted Development Environment:
Option C is correct because GitHub Codespaces are essentially cloud-based environments that are pre-configured with the tools and dependencies needed for development. This allows developers to start coding immediately without the overhead of setting up a local environment.
Incorrect Options:
Option A is partially correct in that Codespaces can be accessed and used in a browser, but the defining feature is that it's a full development environment, not just a lightweight editor.
Option B is incorrect because this describes GitHub Copilot, not Codespaces.
Option D is incorrect because Codespaces is not a Visual Studio Code plug-in; it is a cloud-based service that integrates with Visual Studio Code.

NEW QUESTION # 35
An employee needs to find all issues within organization "Avocado" containing text "404 error" and a "guacamole" label. Which of the following steps would be best to search for these results?

- A. Enter query org:Avocado is:issue label:guacamole "404 error" in the search bar.
- B. Enter query org:Avocado label:guacamole "404 error" in the search bar. Select "Issues" in the Filter by section.
- C. Go to "Avocado" organization. Select Issues under a repository. Filter issues with a "guacamole" label.
- D. Go to the Avocado organization settings. Select Repository defaults under Repository. Scroll to Repository labels and select the 'guacamole' label.

Answer: A

Explanation:
GitHub provides a powerful search syntax to filter and find specific issues across repositories in an organization.
Search Query Syntax:
Option A is correct because the query org:Avocado is:issue label:guacamole "404 error" is the best way to search for all issues within the "Avocado" organization that contain the text "404 error" and are labeled with "guacamole". This query is precise and leverages GitHub's advanced search capabilities.
Incorrect Options:
Option B is incorrect because it requires manual filtering in a specific repository rather than searching across the entire organization.
Option C is incorrect because selecting "Issues" in the filter by section is redundant when using the query is:issue.
Option D is incorrect because accessing organization settings to look for repository labels is not relevant to searching for issues.

NEW QUESTION # 36
What folder is the definition files stored in when creating custom issue forms?

- A. .issues/ISSUE_TEMPLATE
- B. .GitHub
- C. .issues
- D. .github/ISSUE_TEMPLATE

Answer: D

Explanation:
When creating custom issue forms on GitHub, the definition files are stored in the .github/ISSUE_TEMPLATE folder. This directory is used to define issue templates and forms that help standardize the information collected when users open new issues in the repository. The .github folder is a special directory used for various repository configurations and workflows.

NEW QUESTION # 37
......

GH-900 study material applies to all types of candidates. Buying a set of learning materials is not difficult, but it is difficult to buy one that is suitable for you. For example, some learning materials can really help students get high scores, but they usually require users to have a lot of study time, which is difficult for office workers. However, GH-900 Study Material is to help students improve their test scores by improving their learning efficiency. Therefore, users can pass exams with very little learning time.
